Agricultural Domestic Support: European Union

Hans Grinsted Jensen

(Institute of Food and Resource Economics, University of Copenhagen)

Working Paper 2010-06

AGFOODTRADE (*New Issues in Agricultural, Food and Bioenergy Trade*) is a Collaborative Project financed by the European Commission within its VII Research Framework. Information about the Project, the partners involved and its outputs can be found at www.agfoodtrade.eu.

Financial support received by the “New Issues in Agricultural, Food and Bio-energy Trade (AGFOODTRADE)” (Grant Agreement no. 212036) research project, funded by the European Commission, is gratefully acknowledged. The views expressed in this paper are the sole responsibility of the authors and do not reflect those of the Commission which has not reviewed, let alone approved the content of the paper. The paper does not reflect the views of the institutions of affiliation of the authors either

Agricultural Domestic Support: European Union

Hans Grinsted Jensen
Institute of Food and Resource Economics
University of Copenhagen
Hans@foi.dk

The purpose of this note is to document how domestic support levels for the EU are calculated from the OECD Producer Support Estimate (PSE) and incorporated into the GTAP 8 Database.

The OECD PSE currently includes information about 19 countries' domestic support levels but treats the EU as a single country, whereas the GTAP 8 database has 27 individual member states specified. This is unfortunate and would be misleading if average EU rates of domestic support levels were incorporated into the GTAP database for all member states. Therefore the work of disaggregating the OECD's PSE table by member state has been undertaken, documenting where different Common Agricultural Policy (CAP) payments are allocated in the database. This information is essential if one wants to model the CAP using the GTAP database.

EU domestic support by member country

The starting point of this exercise is the OECD's dataset of PSE tables for the EU27, which can be downloaded from the OECD web site (www.oecd.org/tad/support/psecse). This dataset is a complement to the report "Agricultural Policies in OECD Countries: Monitoring and Evaluation - At a Glance 2010," published by the OECD. As the GTAP 8 database has the base year 2007, the PSE table for this year has been used.

As described by Hsin Huang in chapter 10.A of the GTAP 7 data base documentation, the PSE table is composed of Market Price Support (MPS) and budgetary transfers. MPS is an estimate of indirect transfers that include among other things border measures such as tariffs. To avoid double counting with tariffs in the GTAP database, MPS is not included in the GTAP domestic support¹.

¹ For further information see chapter 10.A in *Global Trade, Assistance, and Production: The GTAP 7 Data Base*.(2008)
https://www.gtap.agecon.purdue.edu/resources/res_display.asp?RecordID=3154

Budgetary transfers (spending) are however included in the GTAP database and are currently classified by OCED into the following broad categories:

- A2. Payments based on output
- B. Payments based on input use
- C. Payments based on current A/An/R/I², production required
- D. Payments based on non-current A/An/R/I, production required
- E. Payments based on non-current A/An/R/I, production not required
- F. Payments based on non-commodity criteria
- G. Miscellaneous

Using a standard formula applied to all regions in the GTAP database, the OECD support categories (A2 to E) are grouped into five GTAP support categories:

1. Output subsidies
2. Intermediate input subsidies
3. Land-based subsidies
4. Capital-based subsidies
5. Labor-based subsidies

OECD support categories F and G are excluded from the GTAP database because they are not related to commodity production (e.g. wetlands, conservation reserve and so forth).

In the PSE tables, the OECD divides the total support give to a country into Single Commodity Transfers (SGT), Group Commodity Transfers (GCT), All Commodity Transfers (ACT); and Other Transfers to Producers (OTP). This method of allocating domestic support in a country reflects the facts that support in many countries is less tied to an individual commodity. For example in the PSE tables hectare premiums are given to a group of commodities (cereals oilseed and protein crops), while fuel tax rebates are a general support to all agricultural commodities. An example of OTP found in the PSE tables is the single area payments in the new member states, where the recipient is not obliged to engage in commodity production at all.

² The letters stand for Area (A), Animal Number (AN), Receipts (R) or Income (I)

Given this structure of the PSE tables, the first step in creating 27 individual domestic support tables for the EU countries is to disaggregate the total support report in the four categories SGT, GCT, ACT and OTP for the EU by member country and GTAP commodity. In order to illustrate the method used Table 1a and 1b shows the aggregated EU27 payments by type of support. The accompanying excel file to this note contains the same tables for the 27 individual member countries.

First in Table 1a, the SCT payments and production values by GTAP commodity are shown. These values of production (in producer prices) are calculated from EUROSTAT's Economic Accounts for Agriculture where production values by commodity and member country can be found. Secondly; the OECD support categories are allocated to the 5 types of GTAP support (output, input, land, capital and labor subsidies) where after payments are allocated to GTAP commodities and by member states. The disaggregation by member country and the allocation of payments to the 12 agricultural sectors found in the database is simply done by:

- Matching PSE payment items with corresponding payments in the European Agricultural Guarantee Fund (EAGF) 2008 financial year, where payments are specified by member country (EU budget items are shown in the tables).
- National payments found in the PSE tables are split into individual member country payments using additional information obtained from the OECD.
- European Agricultural Fund for Rural Development (EAFRD) payments found in the PSE table is allocated to individual member countries relative to national co financing payments.
- Finally, SCT payments are allocated to the 12 primary agricultural sectors.

In general the allocation of payments for the individual member countries follows the method used by the OECD at the aggregated EU27 level, which is documented in the PSE notes to the EU PSE tables.

In the same manner, payments are allocated in GCT, ACT and OPT which are shown in Table 1b. ACT and OPT payments are subsidies given in general to all commodities (total value of agricultural production) and while GCT are given to groups of commodities.

In the EU the OECD has classified 12 different types of GCT in the PSE tables, with no payments recorded in two of these groups in 2007 (omitted from Table 1b). The value of production in each group is calculated using production values from EUROSTAT's Economic Accounts for Agriculture.

Incorporate domestic support data into the GTAP database

Using these tables for the individual EU member countries, where PSE support payments are grouped into the four categories SCT, GCT, ACT and OTP the following method is used to incorporate domestic support data into the GTAP database.

The GTAP database distinguishes between 12 primary agricultural sectors, necessitating a method to be employed of allocating GCT, ACT and OTP payments to these sectors in the database.

The ACT support payments are allocated to the 12 primary agricultural GTAP sectors, relative to each sector's share of the total value of agricultural production within each member country. In the case of GCT, the total value of production in each group is disaggregated to GTAP concordance (agricultural sectors) where after payments are allocated to the GTAP sectors relative to each sectors share of the total value of production in each group. Last we have the OTP which are allocated in the GTAP database as a homogenous rate of support to all factor endowments (land, labor, Capital) employed in primary agricultural GTAP sectors. Finally after allocating GCT, ACT and OTP payments we add up $SCT + GCT + ACT + OTP$ to get the total value of support given to each agricultural sector in the individual member countries³.

The total value of support is used to calculate the relative power of support which is derived by dividing the total value of payments by the value of production and adding 1. The power of domestic support can then be used to find the GTAP value of payments in the GTAP 8 database by multiplying the power of the domestic support with the corresponding GTAP value of production. The percentage value share of output, input, land, labor and capital-based subsidies are used to allocate the calculated GTAP values of payments to the appropriate tax wedges in the GTAP 8 database.

³ For further information see chapter 10.C in *Global Trade, Assistance, and Production: The GTAP 7 Data Base*.(2008)
