BARLEY DATA BOOK

by

CTAP Staff

CTAP Staff Report No. 8
March 1985

Prepared by

R. Thamodaran, Model Research and Development Coordinator
Anisossadat Bahrenian, Data Book Coordinator and Barley Specialist
Duane Schouten, Data Base Manager
Jess Robinson, Computer Support Manager
Patrick Westhoff, Editor
William H. Meyers, Professor-in-Charge

Data Source

Original data were obtained from the OASIS Databank, World Analysis Branch, International Economics Division, Economic Research Service, U.S.D.A. Data were adjusted in some regions and years to maintain consistency between ending stocks and beginning stocks and between supply and demand. Data are on a crop year basis for the respective regions. In the tables, a "." indicates missing data.

Annotated Index - Barley

<u>Country or Region*</u>	<u>Page</u>
United States	11
Production changed little between the early 60's and the late 70's before increasing slightly in the early 80's. Yields increased by 75% during the period, while area harvested declined substantially. Domestic consumption remained relatively constant, as food use increased and feed use declined. Food use accounted for over 40% of domestic consumption in the early 80's. Between 10 and 20% of production was exported in most years. Stocks accumulated in the late 60's, the late 70's, and in 1982.	
Canada	15
Production tripled during the period, due to increases in both yield and area harvested. Domestic consumption, primarily as feed, doubled during the 60's and remained relatively constant thereafter. Exports increased six-fold, with most of the increase occurring in the early 70's and early 80's. Stocks fluctuated considerably from year to year.	
Brazil	19
The country was a minor producer. Production increased rapidly in the mid 70's due to increases in area harvested, but changed little in other years. Domestic consumption increased four-fold, as food use increased even more rapidly, and feed use declined to zero. Imports increased four-fold as well, and supplied half of domestic demand in the early 80's.	
Argentina	21
Production declined sharply after the mid 70's due to a decline in area. Feed use accounted for two-thirds of domestic consumption at the beginning of the period, but had declined to negligible levels by the early 80's. Exports varied widely from year to year, but were much lower after the mid 70's than they were in the 60's.	
Mexico	23
Production more than doubled between the early 60's and 1978 before declining in later years. Changes in yield accounted for most of the variation in production. Feed use was much greater during the mid to late 70's than it was during the rest of the period. Food use generally increased over time, and accounted for 80% of consumption in the early 70's. Imports varied considerably, supplying between 0 and 40% of domestic demand.	
Other South America	25
Production increased modestly between the early 60's and mid 70's before returning to original levels in the early 80's. Neither yield nor area harvested changed dramatically over time. Food use increased 50% during the period, and accounted for 90% of domestic consumption in the early 80's. Net imports increased rapidly, and supplied one-third of domestic demand in the early 80's.	

*Regional definitions are found on page 6.

<u>Country or Region</u>	<u>Page</u>
Egypt	27
Production declined slightly due to a decline in area harvested. Food use declined, but feed use increased to account for two-thirds of domestic consumption in the early 80's. The country did not trade barley internationally in years after 1966.	
High Income North Africa & Middle East	29
Production changed little, as yield increased and area harvested declined. Domestic consumption tripled, with most of the increase occurring in the late 70's and early 80's. Feed use accounted for three-fourths of domestic consumption at the end of the period, compared to just one-fourth at the beginning. The region was a net exporter in the early 60's, but net imports supplied 60% of domestic demand in the early 80's.	
Other Low Income North Africa and Middle East	33
Production doubled between the early 60's and the early 80's, due primarily to increased yields. Consumption generally changed with production. Feed use accounted for 70% of consumption demand in the early 80's. The region was a net importer in some years and a net exporter in others, but net trade never accounted for more than 10% of production or consumption.	
Republic of South Africa	37
The country was a minor producer whose production increased four-fold during the 70's. Domestic consumption, primarily for food use, generally changed with production. The country imported barley in most years prior to 1974, exported barley in the late 70's, and was self-sufficient in 1981 and 1982.	
Central Africa	39
Production increased modestly until a sharp decline in 1974, when area harvested declined by 50%. Not until the early 80's did production again approach levels of the early 60's. Consumption moved with production, as the region traded only negligible amounts of barley internationally.	
East Africa	41
The region was a minor producer whose production increased rapidly in the 70's and early 80's. Food use accounted for all of domestic consumption. The region was essentially self-sufficient throughout the period.	
People's Republic of China	43
Production increased by 75% even as area harvested declined, due to a sharp increase in yield. Consumption generally changed with production. The country imported small amounts of barley at the beginning and the end of the period, and was self-sufficient in most years between 1966 and 1977.	

<u>Country or Region</u>	<u>Page</u>
Japan	45
Production declined dramatically due to a sharp decline in area harvested. Domestic consumption declined only slightly, as a decline in food use was largely offset by an increase in feed use. Food use accounted for three-fourths of domestic consumption in the early 80's, compared to just one-third in the early 60's. Imports tripled between the mid 60's and the mid 70's before declining at the end of the period. Imports supplied about 70% of domestic demand in the early 80's.	
India	49
Production changed little between the early 60's and the mid 70's, but then declined at the end of the period due to a reduction in area harvested. Food use accounted for almost all of domestic consumption, which generally changed with production. The country exported negligible amounts of barley in the late 70's and early 80's, but was essentially self-sufficient.	
Other South Asia	51
Production, area and yield all remained essentially unchanged between the early 60's and the early 80's. Food use accounted for almost all of domestic consumption. International trade was negligible, except for small imports in 1972 and 1973.	
High Income East Asia	53
Production increased until the early 70's and then declined, due to a sharp decline in area harvested. Domestic consumption increased sharply between 1969 and 1971 and declined rapidly between 1979 and 1982. Food use accounted for about 70% of domestic consumption in the early 80's. Net imports were greatest in the mid 70's, but they still supplied one-fourth of domestic demand in the early 80's.	
Australia	57
Production changed erratically, but generally increased until the late 70's. Area harvested more than doubled, but there was no distinct trend in yield. Consumption also fluctuated considerably, with 1971, 1978 and 1981 being peak years. Feed use accounted for most of domestic consumption in the 70's and early 80's. Exports expanded rapidly in the 70's, but contracted in the early 80's. Approximately half of production was exported in most years.	
New Zealand	61
Production increased five-fold, due to increases in both yield and area harvested. Feed use accounted for most of domestic consumption, which tripled during the period. The country was an importer during the early 70's and an exporter during the late 70's and early 80's.	

<u>Country or Region</u>	<u>Page</u>
USSR	63
Production increased four-fold between the early 60's and 1976, but declined 50% between 1976 and 1982. The production increase was due to increases in both yield and area harvested, while the decline was due to falling yields. Feed use accounted for about 70% of domestic consumption, which increased slightly less rapidly than production. The country was a net exporter in the 60's, a net importer in the early 70's, a net exporter from 1976 to 1978, and a net importer from 1979 to 1982.	
EC-10	67
Production more than doubled due to increases in both yield and area harvested. Feed use accounted for three-fourths of domestic consumption throughout the period. Consumption grew less rapidly than production, so the EC became a net exporter in the early 70's after being a net importer in the 60's. Net exports accounted for almost 10% of production in the early 80's.	
Other Western Europe	71
Production tripled due primarily to a doubling of area harvested. Feed use accounted for more than 80% of domestic consumption in most years. Consumption grew at approximately the same rate as production. Net imports fluctuated considerably, as the largest net imports, in 1982, occurred just two years after the only year in which the region was a net exporter.	
Eastern Europe	75
Production more than doubled due to increases in both area and yield. Feed use increased more rapidly than food use, and accounted for three-fourths of domestic consumption at the end of the period. Consumption demand increased slightly more rapidly than production until its peak in 1978, but then declined. Net imports increased seven-fold between the early 60's and 1978, but then declined sharply. Net imports supplied 20% of domestic demand in 1978, but just 3% in 1982.	
Developed Countries	81
Production doubled, due to increases in both area and yield. Feed use increased more rapidly than food use, and accounted for three-fourths of domestic consumption in the early 80's. Developed countries were marginal net exporters in the early 60's, but by the early 80's, net exports accounted for 10% of production.	
Centrally Planned Countries	85
Production tripled between the early 60's and the mid 70's, due to increases in both area and yield. Production declined in the late 70's and early 80's, due to a reduction in both area and yield. Consumption generally changed with production. Net imports varied considerably, but never supplied more than 10% of domestic demand.	

<u>Country or Region</u>	<u>Page</u>
Developing Countries	89

Production increased slightly despite a reduction in area harvested, due to a 50% increase in yield. Consumption increased more rapidly than production, resulting in a large increase in net imports. Net imports supplied about 20% of domestic demand in the early 80's.

World	93
-------	----

Production doubled between the early 60's and the mid 70's, and then remained fairly steady. Both area and yield contributed to the early production gain, and both changed little after 1975. Feed use increased more rapidly than food use, and accounted for two-thirds of consumption in the early 80's. The volume traded internationally more than doubled during the period, but was generally less than 10% of production.
