Agricultural Commissioners' Crop Reports

Butte County

2015-2017

BUTTE COUNTY CROP REPORT 2015

Butte County Agricultural Commissioner's Mission Statement

Protect and perpetuate Agriculture, the #1 industry in Butte County, by ensuring a safe and healthy agriculture product. Promote and provide confidence of buyers and sellers by ensuring fairness in local, national and international trade. Protect and promote the wellbeing of all our customers and our community through the fair, equitable application of agricultural and weights and measures standards, emphasizing education and cooperation, including the use of technology to enhance customer service.

Louie B. Mendoza Jr.

Agricultural Commissioner / Director of Weights & Measures

The 2015 Crop Report is dedicated to Richard B. Price and Joseph H. Connell

Richard served as the Butte County Agricultural Commissioner Director of Weights & Measures for 27 years. Richard guided the Agricultural Department during challenging times of agricultural regulatory change, and pest prevention programs. Richard oversaw the protection and preservation of agriculture, the number one industry in Butte County, by ensuring a safe and healthy agricultural product. Richard helped secure marketplace confidence by enforcing weights & measures laws and regulations. He protected and promoted the well-being of all agricultural customers and community members through fair and equitable application of agricultural and weights and measures standards, emphasizing education and cooperation, including the use of technology to enhance customer service. At the time of his retirement Richard was the longest serving California Agricultural Commissioner & Sealer.

Joe served as Farm Advisor with the University of California Cooperative Extension office in Butte County for 34 years. His specialty was almonds, olives, citrus and ornamental landscape plants, but his vast knowledge in all areas related to agriculture was invaluable to the citizens of Butte County. His work with almond growers included research on pest and disease management, pruning, frost protection, irrigation, new rootstock and varieties, and timely harvest. Joe was instrumental in establishing the Butte County Master Gardener program and hosted the first Honeybee Tech Transfer Team as part of a nationwide effort to help beekeepers and bee breeders “bee informed” about management practices for producing strong honeybee colonies for pollination of almonds and other crops throughout the United States. He served as County Director of the Extension office from 2011 until his retirement.

Karen Ross
Secretary of California Department of Food and Agriculture

The Honorable Butte County Board of Supervisors
Bill Connelly, Chair Larry Wahl
Maureen Kirk Doug Teeter
Steve Lambert

Paul Hahn
Chief Administrative Officer

Dear Sirs and Madams,

In accordance with provisions of the California Food and Agriculture Code section 2279, I am submitting the 76th annual crop report that shows the agricultural production and agricultural value in Butte County for the 2015 calendar year. Our department has been providing annual crop reports since 1939.

This report is a summary estimate of the acreage, production and gross value of Butte County agricultural products. The values presented in this report are gross values only, and do not reflect net farm income or costs of production and marketing.

The estimated gross value of agricultural production in Butte County for 2015 totaled **\$772,639,884**. This is a \$38,265,514 decrease over the 2014 gross value total of \$810,905,398. The total increase in gross value of agriculture during 2015 is 18% above our county 10-year average of \$652,450,570.

I wish to extend my appreciation to the many producers, processors and agencies, both private and governmental, who assist with this report by providing us with specific information pertaining to their business. I would also like to thank the staff of the Butte County Agriculture Department for compiling this report.

Respectfully submitted,

Louie B. Mendoza Jr.

Louie B. Mendoza Jr.
Agricultural Commissioner
Director of Weights & Measures

2015 PHYTOSANITARY EXPORTS

In 2015, a total of 2,116 phytosanitary certificates were issued and exported to 68 countries and 15 states within the United States. Shipments included a variety of fruits, vegetables, grains, beans, lumber and plants. In addition, approximately 978 seed field acres were inspected and certified during the 2015 season.

2015 SUSTAINABLE AGRICULTURAL REPORT

This report summarizes the varied activities and the methods used to prevent and control the spread of exotic pests in Butte County.

The pest, exclusion, detection, management and eradication programs serve to protect the county from infestation of introduced pests. Through monitoring and quick response to small infestations, damaging pest populations can be controlled before they require a large-scale response.

Biological Control provides a method of sustainable pest control with a minimum impact to the environment.

PEST DETECTION

A total of 991 traps were placed throughout the County to detect the presence of pests. The trap total included 300 Mediterranean, Oriental and Melon Fruit Fly traps, 77 Japanese Beetles traps; 214 traps for the Gypsy Moth, 243 Glassy-winged Sharpshooter traps, and 157 Asian Citrus Psyllid traps.

PEST EXCLUSION

Approximately 4,383 shipments were inspected for live exotic pests including the Glassy-winged Sharpshooter and Sudden Oak Death resulting in the issuance of 37 Notice of Rejections.

PEST MANAGEMENT

Weed Control Projects

		Control Activity	Chemical	Distribution
Skeleton Weed	<i>Chondrilla juncea</i>	Herbicide	Aminnopyralid	5 sites ~ 15 acres
Knap Weed, species	<i>Centaurea species</i>	Herbicide	Aminnopyralid	3 sites ~ 35 acres

Winged Water Primrose	<i>Ludwigia decurrens</i>	Herbicide	Glyphosate	Limited locations in Richvale

Insect Control Projects

		Control Activity	Chemical	Distribution
Glassy-winged Sharpshooter	<i>Homalodisca vitripennis</i>	Insecticide	Imidacloprid	Chico, Eradicated

A Century of Weights & Measures in Butte County

2015 marked the 100 year anniversary of Weights and Measures in Butte County. One of the functions of the Agricultural Commissioner/Sealer is to ensure equity in the marketplace.

Alfred James Storey was the first Sealer of Weights & Measure in Butte County. He was appointed in 1915 by the Butte County Board of Supervisors. A quote from his biography read "He is faithfully serving the best interest of the public of Butte County, in the conduct of his responsible office, and is quick to detect and bring to justice the unscrupulous dealer whose short yard-stick and false balance are still, as in the days of Solomon, an abomination to the Lord." From that point forward Weights and Measures officials have been charged with the task of ensuring that items bought and sold in the marketplace are fair, equitable and honest.

Since 1915 Weights & Measures officials have been performing tests regarding mass, volume, liquid, area, and length on devices such as scales and meters, and commodities like packaged goods and cords of firewood. The purpose of the testing is to determine accurate outcomes for buyers and sellers. Once the device is deemed accurate the inspector adheres an official seal to the face of the equipment to inform the consumer that it was tested and found correct. The seals are two inches in diameter with the emblem of the Great State of California the Roman goddess Minerva holding a spear and shield. The seal color changes annually and the Sealer's name may also change depending on whether or not a new Agricultural

Commissioner/Sealer has been appointed. To celebrate the 100 year anniversary of Weights and Measures service in Butte County our office duplicated the design of the original 1915 seal. The only exception was to the color. We hope the 2015 design draws attention to the seals and illuminates the 100 years of Weights and Measures services provided by Butte County.

Many changes have taken place over the years and now there is much more to evaluate and examine than there were 100 years ago. Advances in technology have led to equipment becoming increasingly more sophisticated in its speed, delivery and recording capabilities. Today, checking the accuracy of a device is only part of the inspection. Many devices are now interfaced with computer software systems which require us to examine the different ways computer generated data can be manipulated to facilitate fraud. One example would be the added effort of opening the housing units of gas pumps to search for credit/debit card skimmer devices, which can be used to illegally retrieve card and personal pin numbers.

Although many things have changed, the department's purpose still remains the same. The dedicated employees of the Butte County Agriculture/Weight and Measures Department continue to serve the community the same way they always have with an unparalleled commitment to excellence and a fervent desire to serve the public. The same way Alfred James Storey did a century ago.

A variety of old seals from the past.

Butte County
2016 Crop Report

Butte County Agricultural Commissioner's Mission Statement

Protect and perpetuate Agriculture, the #1 industry in Butte County, by ensuring a safe and healthy agriculture product. Promote and provide confidence of buyers and sellers by ensuring fairness in local, national and international trade. Protect and promote the wellbeing of all our customers and our community through the fair, equitable application of agricultural and weights and measures standards, emphasizing education and cooperation, including the use of technology to enhance customer service.

*Louie B. Mendoza Jr.
Agricultural Commissioner / Director of Weights & Measures*

A Special Thanks!

The Butte County Agriculture/Weights & Measures Department would like to take this opportunity to acknowledge Gary Imhoff. Gary served the department for ten years as a Pest Detection Trapping Specialist and retired in 2016. Gary deployed, monitored and serviced thousands of insect traps in rural and urban areas throughout the county and performed the job with efficiency and reliability. The traps he placed were for the detection of exotic insect pests of economic importance to the State and County. Insect pests included Mediterranean, Oriental and Melon Fruit Flies, Gypsy Moth, Japanese Beetle, Asian Citrus Psyllid, Glassy-Winged Sharpshooter and the European Grapevine Moth. In 2013, he trapped two Gypsy Moths and assisted with the delimitation program, and fortunately, the initial two were the only two found.

Before coming to work for Butte County, Gary served in the United States Army from 1960 to 1963 and was stationed in Orleans, France. He also worked for Colgate-Palmolive Company for 27 years in military sales. Gary is currently a member of American Veterans, Color and Honor Guard, Butte County Sheriff's Mounted Posse and the Butte Rose Society. He participates in Memorial and Veterans Day functions and is active in the Elks Lodge in Chico. In his spare time he enjoys working in his rose garden and helping other rose enthusiasts with theirs.

We wish you the very best, and enjoy your retirement, Gary!

September 12, 2017

Karen Ross
Secretary of the California Department of Food and Agriculture

The Honorable Butte County Board of Supervisors
Bill Connelly, Chair Larry Wahl
Maureen Kirk Doug Teeter
Steve Lambert

Paul Hahn
Chief Administrative Officer

Dear Sirs and Madams,

In accordance with provisions of the California Food and Agriculture Code section 2279, I am submitting the 77th annual crop report that shows the agricultural production and agricultural value in Butte County for the 2016 calendar year. Our department has been providing annual crop reports since 1939.

This report is a summary estimate of the acreage, production and gross value of Butte County agricultural products. The values presented in this report are gross values only, and do not reflect net farm income or costs of production and marketing.

The estimated gross value of agricultural production in Butte County for 2016 totaled **\$705,211,786**. This is a \$67,428,098 decrease over the 2015 gross value total of \$772,639,884. The total increase in gross value of agriculture during 2016 is 4% above our county 10-year average of \$680,461,549.

I wish to extend my appreciation to the many producers, processors and agencies, both private and governmental, who assist with this report by providing us with specific information pertaining to their business. I would also like to thank the staff of the Butte County Agriculture Department for compiling this report.

Respectfully submitted,

Louie B. Mendoza Jr.

Louie B. Mendoza Jr.
Agricultural Commissioner
Director of Weights & Measures

2016 PHYTOSANITARY EXPORTS

In 2016, a total of 2,859 phytosanitary certificates were issued and exported to 73 countries and 8 states within the United States. Shipments included a variety of fruits, vegetables, grains, beans, lumber and plants. In addition, approximately 804 seed field acres were inspected and certified during the 2016 season.

2016 SUSTAINABLE AGRICULTURAL REPORT

This report summarizes the varied activities and the methods used to prevent and control the spread of exotic pests in Butte County.

The Pest Exclusion, Detection, Management, and Eradication programs serve to protect the County from an infestation of introduced pests. Through monitoring and quick response to small infestations, damaging pest populations can be controlled before they require a large-scale response.

Biological Control provides a method of sustainable pest control with a minimum impact to the environment.

PEST DETECTION

A total of 991 traps were placed throughout the County to detect the presence of pests. The trap total included 300 Mediterranean, Oriental and Melon Fruit Fly traps, 77 Japanese Beetles traps, 214 traps for the Gypsy Moth, 243 Glassy-winged Sharpshooter traps, and 157 Asian Citrus Psyllid traps.

PEST EXCLUSION

Approximately 4,383 shipments were inspected for live exotic pests including the Glassy-winged Sharpshooter and Sudden Oak Death resulting in the issuance of 37 Notice of Rejections.

PEST MANAGEMENT

Butte County Weights and Measures and its Significance

Agriculture, commerce, manufacturing and trade, play an important role in Butte County. Business transactions between buyers and sellers are what fuels our economic engine. These transactions must be equitable in order for both parties to share approval and the source of fair and honest trade comes from the use of accurate weights and measures. Since 1915 weights and measures has played an important part in the economic vitality of the County by the diligent efforts of our hard working officials who examine the means and process by which monetary transactions occur to ensure equity in the marketplace. So, the next time you're at the grocery store purchasing bread, butter and milk you can rest assured you're receiving the quantity you paid for because of the efforts of Weights and Measures Officials.

Legend

-  Prime Farmland has the best combination of physical and chemical features able to sustain long-term agricultural production. This land has the soil quality, growing season, and moisture supply needed to produce sustained high yields. Land must have been used for irrigated agricultural production at some time during the four years prior to the mapping date.
-  Farmland of Statewide Importance is similar to prime farmland but with minor shortcomings, such as greater slopes or less ability to store soil moisture. Land must have been used for irrigated agricultural production at some time during the four years prior to the mapping date.
-  Unique Farmland consists of lesser quality soils used for the production of the state's leading agricultural crops. This land is usually irrigated, but may include nonirrigated orchards or vineyards as found in some climatic zones in California. Land must have been cropped at some time during the four years prior to the mapping date.
-  Grazing land is land on which the existing vegetation is suited to the grazing of livestock.
-  Urban and Built-Up Land is occupied by structures with a building density of at least 1 unit to 1.5 acres or approximately 6 structures to a 10 acre parcel. Common examples include residential, industrial, commercial, institutional facilities, cemeteries, airports, golf courses, sanitary landfills, sewage treatment, and water control structures.
-  Other Land is land not included in any other mapping category. Common examples include low density rural developments, brush, timber, wetland, and riparian areas not suitable for livestock grazing, confined livestock, poultry, or aquaculture facilities, strip mines, borrow pits, and water bodies smaller than 40 acres. Vacant and nonagricultural land surrounded on all sides by urban development and greater than 40 acres is mapped as other land.
-  Perennial Water Bodies with an extent of at least 40 acres.

- (1) Prior to the availability of digital soil data (SSURGO) in 2004, the county was mapped using Interim Farmland categories. See other worksheet.
 (2) Water acreage changed in 2006 due to improved delineation along the Sacramento River and addition of Philbrook Reservoir.
 (3) Water acreage changed in 2016 due to improved delineation along the Sacramento River.

PERCENTAGE OF COUNTY INVENTORIED: 100%
 National Forest areas were added when soil survey data became available.

BUTTE COUNTY

2017

CROP REPORT

The cover photo is from Windmill Farm of Gridley, CA owned by Frank & Paula Carli, and is a representation of small farms and direct marketing of agriculture in Butte County. Small farmers provide consumers with locally grown commodities such as nectarines, apples and flowers. Whether they belong to a Community Supported Ag Program, Certified Farmers' Market or utilize a roadside stand, they are all an important part of our community.

When you buy from local farmers, you contribute to the local economy and in turn, benefit from the freshness and variety of seasonally grown crops.

September 11, 2018

Karen Ross
Secretary of the California Department of Food and Agriculture

The Honorable Butte County Board of Supervisors
Steve Lambert, Chair Larry Wahl
Maureen Kirk Doug Teeter
Bill Connelly

Shari McCracken,
Chief Administrative Officer

Dear Sirs and Madams,

In accordance with provisions of the California Food and Agriculture Code section 2279, I am submitting the 78th annual crop report that shows the agricultural production and agricultural value in Butte County for the 2017 calendar year. Our department has been providing annual crop reports since 1939.

This report is a summary estimate of the acreage, production and gross value of Butte County agricultural products. The values presented in this report are gross values only, and do not reflect net farm income or costs of production and marketing.

The estimated gross value of agricultural production in Butte County for 2017 totaled **\$696,563,214**. This is a \$775,897 increase over the 2016 gross value total of \$695,787,317. The total gross value of agriculture during 2017 is slightly less than our county 10-year average of \$696,650,123.

I wish to extend my appreciation to the many producers, processors and agencies, both private and governmental, who assist with this report by providing us with specific information pertaining to their business. I would also like to thank the staff of the Butte County Agriculture Department for compiling this report.

Respectfully submitted,

Louie B. Mendoza Jr.

Agricultural Commissioner
Director of Weights & Measures

A Sincere Thank You!

The Butte County Agriculture Department would like to take this opportunity to recognize Sally Loker. Sally worked for the department for eleven years as our Geographic Information System (GIS) Specialist. Sally's knowledge and expertise using established GIS software programs, commands and compilation methods, and her ability to generate and utilize spatial overlays was a huge benefit to the department. Some of Sally's duties included providing request for special services, producing special purpose maps used to determine sensitive pesticide application sites and buffer distances, data compilation and retrieval of GIS data for the department.

Sally felt that her most rewarding project was being able to use ArcGIS to benefit the Agricultural Biologists performing inspections in the field, and on their iPads. In addition to working for the department, Sally has been busy volunteering with the Butte County UC Extension Master Gardening program and the Sierra Club. In the above photo Sally was participating in ice plant eradication at Point Reyes, near San Francisco. Way to go Sally!

In her retirement, Sally has been able to dedicate more time to traveling, playing tennis, yoga, and spending time with her family.

Sally's mantra, "I do it because it's fun!" Well Sally, we hope you are still having fun! We miss you and wish you a very happy and blissful retirement!

Butte County Agricultural Commissioner's Mission Statement

Protect and perpetuate Agriculture, the #1 industry in Butte County, by ensuring a safe and healthy agriculture product. Promote and provide confidence of buyers and sellers by ensuring fairness in local, national and international trade. Protect and promote the wellbeing of all our customers and our community through the fair, equitable application of agricultural and weights and measures standards, emphasizing education and cooperation, including the use of technology to enhance customer service.

2017 SUSTAINABLE AGRICULTURAL REPORT

This report summarizes the varied activities and the methods used to prevent and control the spread of exotic pests in Butte County.

The Pest Exclusion, Detection, Management, and Eradication programs serve to protect the County from an infestation of introduced pests. Through monitoring and quick response to small infestations, damaging pest populations can be controlled before they require a large-scale response.

Biological Control provides a method of sustainable pest control with a minimum impact to the environment.

PEST DETECTION

A total of 1,026 traps were placed throughout the County to detect the presence of pests. The trap total included 300 Mediterranean, Oriental and Melon Fruit Fly traps, 77 Japanese Beetles traps, 214 traps for the Gypsy Moth, 243 Glassy-winged Sharpshooter traps, 157 Asian Citrus Psyllid traps, and 35 European Grapevine Moth traps.

PEST EXCLUSION

Approximately 4,068 shipments were inspected for live exotic pests including the Glassy-winged Sharpshooter and Sudden Oak Death resulting in the issuance of 8 Notice of Rejections.

PEST MANAGEMENT

Weed Control Projects

		Control Activity	Chemical	Distribution
Skeleton Weed	<i>Chondrilla juncea</i>	Herbicide	Aminopyralid	5 sites ~ 15 acres
Knap Weed, species	<i>Centaurea species</i>	Herbicide	Aminopyralid	3 sites ~ 35 acres
Oblong Spurge	<i>Euphorbia oblongata</i>	Herbicide	Triclopyr	Paradise 1 site in Thermalito 1 site Chico

Butte County Weights and Measures

Happy Over Hopper Scales

Hopper scales play an important role in determining the weighing accuracy of commodities in Butte County. Annually, millions of dollars of commodity sales occur using hopper scales and the Butte County Weights & Measures Division is all too enthusiastic to test them to make sure they are correct. A hopper scale is generally a scale that has a containment vessel, the design influenced by the physical properties of the commodity being weighed. Hopper scales can weigh continuous amounts of commodities that flow into batches for packing and or bulk purposes where the product must stay within a closed compartment to prevent any product loss from occurring. For example, when weighing products like stone aggregates, rice grains, granular fertilizers or pesticides. Load cells attached to the hopper scale send the weight readings to a weight indicator, which displays the mass. The design of the hopper can vary according to the needs of the operation. The shape of the load- receiving element is generally a funnel-type that allows materials that are loaded into the hopper to discharge from the bottom of the hopper. Afterwards, the commodity is typically loaded into trucks or railway cars.

The unique design of the weighing element along with their weight capacity range makes testing hopper scales a challenging task. Hopper scales are tested in accordance with national standards and test weights are used in combination with the product material to determine scale accuracy. During the inspection, test weights are connected to the hopper load-receiving element with the use of chains, hoisted off the ground with come-a-longs and pulleys, and suspended freely. The readout display must agree with the amount of the hanging weights. With the test weights lowered back down onto the ground, product material is added into the hopper equaling the weight of the previously tested weights. This process is repeated up to three times if necessary to reach scale capacity, sometimes up to 50,000 pounds! In order to test a single hopper scale it typically takes between two to three hours if everything goes smoothly and when it does, it makes us very happy.
