Agricultural Commissioners' Crop Reports

Kern County

1995-1999

Photo courtesy of Indian Point Ostrich Ranch, Tehachapi, CA

With sales approaching one million dollars in 1995, Kern County ostrich farming appears to be here to stay. The Golden State currently ranks third in ostrich production, only the African continent and the state of Texas are producing more ostriches than California. The Kern County Crop Report has reported ostrich information since 1991. The local industry has grown tremendously since that time, and the market for ostrich products has shown a steady increase since this latest wave started in the mid 1980's. With over 2,600 birds sold from Kern County ranches in 1995, today's ostrich production is a far cry from the single ostrich ranch located near Arvin in the 1920's. Breeding stock was even exported to Asia from this area in 1995.

Along with the feathers and hide, today's ostriches are being raised for their USDA approved red meat. The tax code was recently amended, and ostriches are now classified as poultry. As inventories grow and the number of birds going to slaughter increases, "the other red meat" should be more easily obtained nation-wide.

1995

Ms. Ann M. Veneman, Secretary
Calif. Dept. of Food & Agriculture
-and-
The Honorable Board of Supervisors
County of Kern

In accordance with Section 2279 of the Food and Agriculture Code,
I submit the Agricultural Crop Report for 1995.

The 1995 total value of agricultural commodities produced in Kern
County is \$1,978,951,000; up slightly over the 1994 revised
value. Grapes were again the number one crop with an increase of
8% over the previous year. This gain is attributable to
production per acre and price increases.

The disastrous winter weather caused many crops to produce
reduced per acre yields; cotton and almonds suffered the biggest
reductions. Acala cotton suffered a -23% reduction from 1994;
Pima cotton -34% reduction from 1994; Almonds -51% reduction from
1994.

Despite the reduced yields and reduced acreage for some crops the
price for many crops was up dramatically. The increase in price
for these crops offset the potential total value loss for 1995.
Lettuce experienced a 369% increase over 1994, primarily due to a
tremendously high spring price. Peaches, Plums, and Nectarines
had significant increases over 1994 as well; acreage, production,
and prices were all up. Peaches increased 127%; Nectarines
increased 47%; Plums increased 58%. Stone fruit prices in
general were the highest in the Valley due to an early market.

These figures represent a GROSS receipt of producers and DO NOT
take into account the various costs of production, marketing, or
transportation. NO ATTEMPT IS MADE TO REFLECT NET INCOME OF THE
PRODUCER.

Respectfully Submitted,

A handwritten signature in cursive script, appearing to read "Theodore K. Davis".

Theodore K. Davis
Agricultural Commissioner

KERN COUNTY

SUMMARY OF OUR COUNTY'S

KERN CO EXPORTED VOLUME

FY 1994-95 TONNAGE BY GROUP

* KERN COUNTY

KERN COUNTY PHYTOS

FY 1994-95 FED PHYTOS BY GROUP

In FY 1994-95 Kern County issued a total of **8,969 Federal Phytosanitary Certificates** for crops exported to 85 foreign countries. Seventy five percent of those phytos were written to the following top ten countries: **Hong Kong, Indonesia, Japan, Mexico, People's Republic of China, Phillipines, Taiwan, Thailand, United Arab Emirates, and the United Kingdom.**

EXPORTS 94-95

EXPANDING EXPORT MARKET

Darkened countries represent those destinations to which Kern County exported commodities in FY 1994-95.

KERN CO EXPORTED VALUE

FY 1994-95 DOLLAR VALUE* BY GROUP

* Thousands of dollars

In this same time period Kern County exports totalled over **349 million dollars**. This represented approximately eighteen percent of the total Kern County crop value for FY 1994-95. The top ten exported commodities (by value) during this time period were: **Almonds, Apples, Carrots, Garlic, Grapes, Onions, Oranges, Pistachios, Plums, and Roses.**

TOTAL	20	40	59

Sterile Mexican fruit flies

	1993	1994	1995
Bakersfield Area	0	8	0

Sterile Mediterranean fruit flies were being released at the rate of over 300,000 flies in each of the fifteen hundred square miles of the Los Angeles basin every week in 1995. Over the last two years approximately 48 billion sterile Medflies have been released in the LA basin. Invariably, some of these flies find their way to Kern County by hitch-hiking in vehicles headed North over the Grapevine. Once in the San Joaquin valley many of these sterile flies will be captured in one of our 700 strategically placed traps. The last "wild" Medfly was captured in LA County in July, 1994.

Kern County Dairy History 1968 - 1996

Some data courtesy of the Kern County Farm and Home Advisor's Office

Kern County Dairy Production

With total value approaching 3 billion dollars in 1995, California's Milk and Cream production ranks as this state's number one crop. The eight counties in the San Joaquin Valley District produce more milk than all of the other seven districts in the state combined. After a period of slow growth in Kern County the dairy industry is once again moving into this area. With more new dairies planned in the near future, watch for Milk and Cream to play an even greater role in Kern County's agricultural production and value than it has in the past.

Deputy Commissioner

1996

Ms. Ann M. Veneman, Secretary
California Dept. Of Food & Agriculture

-and-

The Honorable Board of Supervisors
County of Kern

In accordance with Section 2279 of the California Food and Agriculture Code, I submit the Agricultural Crop Report for 1996.

The 1996 total value of agricultural commodities produced in Kern County is a precedent setting \$2,067,052,000. For the first time Kern County has exceeded the \$2 Billion mark. This represents an increase of 4% over the revised 1995 total. Of further interest, the top four commodities; Grapes, Cotton, Almonds, and Citrus together total over \$1 Billion.

Cotton rebounded somewhat from the reduced yields in 1995 with a 17% increase. Grapes remained the number one crop despite a slight decrease of -3.5%, primarily due to reduced bearing acreage and lower yields. Ostrich, highlighted in the 1995 Crop Report, sold for 77% over 1995 and 436% over 1994. Wheat increased by 98%, primarily due to an increase in acreage by 49% and increase in price by 26%.

I want to extend a Thank You to all those who provide the Agricultural Commissioner's Office with the information necessary to compile such an extensive breakdown of Kern County's agriculture production. I also want to thank the staff of the Kern County Agricultural Department for their efforts in developing the Crop Report each year.

These figures represent a **GROSS** receipt of producers and **DO NOT** take into account the various costs of production, marketing, or transportation. **NO ATTEMPT IS MADE TO REFLECT NET INCOME OF THE PRODUCER.**

Respectfully submitted,

A handwritten signature in black ink, appearing to read "Theodore K. Davis", is written over a horizontal line.

Theodore K. Davis
Agricultural Commissioner

a/ Includes: Asparagus, Beans (Snap), Broccoli, Cabbage, Cauliflower, Leaf Lettuce, Mixed Greens, Mushrooms, Onions (Green), Parsley, Pea Sprouts, Peppers (Chili and Processing), Pumpkins, Radishes, Red Beets, Rutabagas, Spinach, Squash, Sweet Potatoes, and Turnips.

b/ Includes: Artichokes, Asparagus, Beans (Snap), Broccoli, Cabbage, Cauliflower, Eggplant, Leaf Lettuce, Mixed Greens, Mushrooms, Napa Cabbage, Okra, Onions (Green), Parsnips, Pea Sprouts, Peppers (Chili and Processing), Pumpkins, Radishes, Red Beets, Rutabagas, Squash, Sweet Potatoes, Tomatoes (Fresh), and Turnips.

GEOGRAPHIC INFORMATION

The Kern County Agricultural Commissioner's Office is participating in the statewide implementation of a Geographic Information System (GIS) for agriculture. A GIS is a computerized mapping and spatial analysis program that goes beyond the usual query and examination tools available to database managers. A GIS combines data about a geographic location with reference to that exact location on the Earth. Using a grid system, the described location is visualized on a map and data about that location analyzed and displayed. What makes this system unique is the relationship between the geography and the Earth itself. Every point on the planet is uniquely identified in a GIS so that no two roads, houses, or fields can occupy the same ground. This identification system provides the link between data that have been collected about a feature and the feature as it exists on the Earth.

Figure 1. A portion of the Kern County 1996 cotton acreage is shown here. The cotton fields overlay a commercial road database and a digitized township, range, section map (Cotton fields and sections provided by the Cooperative Pink Bollworm Project).

SYSTEM AND AGRICULTURE

Figure 2. Kern County 1996 almond acreage is shown here as an example of basic GIS technology. Each square represents a one mile section containing one to 640 acres of almonds. Shaded areas of the map represent populated regions.

Agriculture, due to its geographic base and widespread use of maps, is a logical application for this technology. By combining actual images of the area with a digital road map and other information, individual fields are mapped. Once this has been completed, cropping patterns, yields, water usage, chemical applications, and pest/disease information can be visualized at the field level. A GIS allows for the rapid and precise display of information in a format not possible in the past. The old saying "a picture is worth a thousand words," truly applies in this application of modern computer technology.

1997

Ms. Ann M. Veneman, Secretary
California Dept. of Food & Agriculture
-and-
The Honorable Board of Supervisors
County of Kern

In accordance with Section 2279 of the California Food and Agricultural Code, I submit the Agricultural Crop Report for 1997.

The 1997 total value of agricultural commodities produced in Kern County is \$2,192,923,000. This represents a 5% growth over the 1996 value and has for the second year exceeded the \$2 Billion mark.

Grapes retains its prominence as the number one commodity. In 1986 grapes replaced cotton as the number one commodity for the first time. Grapes have remained the number one crop since 1993. Most notable is the shift of cotton to the number three position. Since 1970 Cotton has historically been either the number one or number two commodity. This continues a downward trend in cotton production that began in 1993. Citrus takes over the number two position with a 58% increase in value. This increase is primarily due to an increase in the number of bearing acres and an increase in the production per acre. Lettuce moved into the top twenty crops with a 105% increase. Both production per acre and price were up.

These figures represent a **Gross** receipt of producers and **Do Not** take into account the various costs of production, marketing, or transportation. **No attempt is made to reflect net income of the producer.**

Respectfully submitted,

A handwritten signature in black ink, appearing to read "Theodore K. Davis".

Theodore K. Davis
Agricultural Commissioner

Misc.	f/1997	2,444	---	6,380	Ton	---	\$ 6,729,000
	g/1996	2,400	---	13,000	Ton	---	11,898,000
TOTALS	1997	236,626	---	2,098,410	Ton	---	\$ 1,176,311,000
	1996	233,612	---	1,629,150	Ton	---	1,009,989,000

*Revised

a/ Almond production stated in terms of Nut Meat Equivalent.

b/ Total production includes raisins on a Fresh Equivalent basis.

c/ A combined value reflecting free tonnage and reserve tonnage.

Dry Ratio: 1996 - 4.30 to 1 1997 - 4.20 to 1

d/ Acres, total production, and total value are in Miscellaneous Fruit & Nut.

e/ Pistachio and walnut production stated in terms of In-shell Equivalent.

f/ Includes: Blueberries, Bushberries, Cherries, Figs (Fresh and Dry), Guava/Feijoas, Kumquats, Loquats, All Pears, Pecans, Persimmons, Plumcots, Pomegranates, Prunes, Raspberries, Strawberries, and Table Grapes for Raisin Use.

g/ Includes: Apples (Processed), Bushberries, Cherries, Chestnuts, Figs (Fresh and Dry), Guava/Feijoas, Kumquats, Peaches (Processed), All Pears, Pecans, Persimmons, Pomegranates, Prunes, and Strawberries.

KERN COUNTY 1997 CROP REPORT - SEED CROPS

a/ Includes: Asparagus, Beans (Snap), Broccoli, Cabbage, Carrots, Cauliflower, Eggplant, Herbs (Spice), Leaf Lettuce, Lima Beans, Mixed Greens, Mushrooms, Napa Cabbage, Okra, Onions (Green), Parsley, Peas, Pea Sprouts, Peppers (Chili and Processing), Pumpkins, Radishes, Red Beets, Romaine Lettuce, Rutabagas, Spinach, Squash, Sweet Potatoes, Tomatoes (Fresh), and Turnips.

b/ Includes: Artichokes, Asparagus, Beans (Snap), Broccoli, Cabbage, Carrots, Cauliflower, Eggplant, Leaf Lettuce, Mixed Greens, Mushrooms, Napa Cabbage, Okra, Onions (Green), Parsnips, Pea Sprouts, Peppers (Chili and Processing), Pumpkins, Radishes, Red Beets, Rutabagas, Squash, Sweet Potatoes, and Turnips.

AGRICULTURE &

The Kern County Agricultural Commissioner's Office and the Internet

Our office has maintained a presence on the World Wide Web for over three years. The tremendous explosion of information available through this medium promises to reshape the way agribusiness is conducted in our valley. Listed below are just a few of the services available to the San Joaquin valley agricultural community through our home page:

Export Information

With more and more agricultural commodities being exported from our area every year, the Kern County Agricultural Commissioner's Office devotes a portion of its home page to current, reliable export information. Purdue University maintains a subscription database detailing export requirements for more than 200 countries. Our office maintains a subset of this database with shipping requirements for over 100 countries of local interest. This free service allows area exporters to keep abreast of changing requirements for locally produced export commodities.

We also maintain an on-line reference of local exporters so that anyone, anywhere in the world can contact valley shippers for information on specific commodities of interest. Contact our office to be included in this resource.

Crop Reports

The statistical information included in our annual crop report is useful to a wide variety of agribusiness related industries. We have published five years of crop reports on-line to date, and will ultimately release all seventy plus year's worth of data on our web site, providing instant access to this information to a world-wide audience.

Other Information

Log on to our site and download California registered pesticide data, jump to the Weather Center for frequently updated valley weather forecasts, or e-mail office staff. Our site also includes timely press releases, bulletins, and information on current issues (seminars, meetings, etc.).

Visit us at: <http://www.netxn.com/~agcom15/>

THE WORLD WIDE WEB

Agriculture Related Resources on the Internet

One of the most valuable resources on a well executed web page is the wealth of related sites available to visitors. These jumping off points often lead to resources unfamiliar to the navigator. Listed below are some of the related pages one can access from the Kern County Agricultural Commissioner's Office home page:

The USDA Foreign Agricultural Service (FAS)

This site offers trade reports by country and counseling services for exporters such as trade leads, buyer lists, and credit guarantee programs.

CDFR Agricultural Export Program

This web page provides information on upcoming trade shows, international mission information and resources, and a vast array of export publications.

The Kern County Farm Bureau

This site offers a five day cotton planting forecast in Fahrenheit degree days, information on the recently implemented Agricultural Biology concentration at Cal State University Bakersfield, and Kern County's own Farm News on-line.

USDA Animal and Plant Health Inspection Services (APHIS)

Information available at this site includes current Medfly infestation information, wheat Karnal Bunt statistics for the United States, and on-line access to hundreds of USDA APHIS publications.

California Department of Pesticide Regulation

This very useful and informative site includes a free subscription e-mail service for current department news releases and endangered species information, and the most up-to-date Section 18 information available anywhere. This site also includes query engines for finding the most current product/label information for California registered pesticides and for determining section based endangered species habitat/pesticide use limitations.

Precision Farming

The University of Georgia College of Agricultural and Environmental Sciences maintains a detailed reference for those interested in technology on the farm. GIS, GPS, variable rate technology, soil mapping, and computer hardware & software information can all be found at this site.

<i>Total value without timber</i>	1997			\$2,191,290,000
	1996			2,087,800,300

PEST PREVENTION AND CONTROL

Pest Eradication

Attempt to exterminate new and economically important pest species from a known infested area.

Twenty five pests were intercepted at inspections conducted at Post Offices, FedEx, UPS, truck terminals, Express carriers, rail, airports, and retail stores.

Pest Exclusion

Attempt to prevent the introduction and spread of injurious plant pests and diseases into an area where it does not already occur.

Pest Detection

Systematic search for specific pests in urban, commercial, and high hazard areas to find pest introductions before they become generally distributed.

Three exotic pests were discovered in 1997. An Oriental Fruit Fly and a Gypsy Moth were trapped before they became established. Red Imported Fire Ants were discovered in Lost Hills.

Nuisance pests include rodents and birds which cause crop loss and can carry disease. Hairy Weevils were released as a natural enemy (Biological Control) of Yellow Starthistle.

Pest Management

Attempt to manage nuisance pests by advising property owners or through the use of natural enemies.

THEODORE K. DAVIS

Agricultural Commissioner

LOUIE I. CERVANTES

Assistant Commissioner

JACK E. MARKS

Deputy Commissioner

DAVID J. MOORE

Deputy Commissioner

1998

Mr. Bill Lyons, Secretary
California Dept of Food & Agriculture
-and-
The Honorable Board of Supervisors
County of Kern

In accordance with Section 2279 of the California Food and Agricultural Code, I submit the Agricultural Crop Report for 1998.

The 1998 total value of agricultural commodities produced in Kern County is \$2,068,032,200. This represents a 7.7% decrease from the 1997 crop value. This is the third consecutive year Kern County has exceeded the \$2 Billion mark.

Grapes retain their prominence as the number one commodity despite a 14% decrease in value. Cotton continues to decline in value, dropping to the number four crop with a 50% loss in value. Commodities showing the largest increase were: fresh bell pepper increased 211%; tomatoes increased 74%; cantaloupe increased 70% and garlic increased 51%. Total harvested acreage was up 2%. Fruit and Nut harvested acres were up 6%. Bearing cherry acreage increased 108%. Maricopa is now the home of the largest ostrich processing plant in the Western United States. Ostrich breeding stock is exported from Kern County to many Asian Nations.

Included in the 1998 crop report is the affect on crops caused by the El Niño phenomenon. The impact was felt in many crops throughout Kern County. Partially due to El Niño, the total loss from the 1997 revised crop value is nearly \$200 million. This does not include the 1998-99 citrus freeze damage, which will be reported in the 1999 crop report.

These figures represent a **Gross** receipt of producers and **do not** take into account the various costs of production, marketing, or transportation. **No attempt is made to reflect net income of the producer.**

Respectfully submitted,

A handwritten signature in black ink, appearing to read "Theodore K. Davis", is written over a horizontal line.

Theodore K. Davis
Agricultural Commissioner

a/ Almond production stated in terms of Nut Meat Equivalents.

b/ Total production includes raisins on a Fresh Equivalent basis.

c/ A combined value reflecting free tonnage and reserve tonnage.

Dry Ratio: 1997 - 4.20 to 1 1998 - 4.80 to 1

d/ Acres, total production, and total value included in Miscellaneous Fruit & Nut.

e/ Pistachio and walnut production stated in terms of In-shell Equivalents.

f/ Includes: Blueberries, Boysenberries, Cherries, Figs (Fresh and Dry), Kumquats, Ollalibberries, All Pears, Pecans,

Persimmons, Pomegranates, Prunes, Raspberries, Strawberries, Processing Apricots and Peaches, and Wine Grapes for Juice Use.

g/ Includes: Blueberries, Bushberries, Cherries, Figs (Fresh and Dry), Guava/Feijoas, Kumquats, Loquats, All Pears,

Pecans, Persimmons, Plumcots, Pomegranates, Prunes, Raspberries, Strawberries, and Table Grapes for Raisin Use .

el niño returns

What is an El Niño?

An El Niño is a temporary change in the climate of the Pacific Ocean, in the region around the equator. Its effects will be seen in both the ocean and atmosphere, generally in the Northern Hemisphere winter. Simply put, El Niño is a vast swath of warm water - the current stretch is about one and a half times the size of the continental United States - that appears off Peru every two to seven years.

Most of the time, this bathtub-temperature water remains in the western Pacific held by westbound trade winds, but sometimes the winds slacken or even move in the opposite direction. When this happens, the piled up water sloshes back across the Pacific to the South American Coast. The warmer ocean then affects the winds, making them weaker! So as the winds get weaker the ocean gets warmer; which makes the winds get weaker, which makes the ocean get warmer...which makes El Niño grow. The warm water provides the thermal energy to expedite evaporation, hence cloud formation and storms. The extra heat within the water acts like wood tossed on a fire, creating more, and bigger, storms. Raging with the heat trapped in its waters, El Niño sends debilitating storms to the California coast, droughts in Australia and cool, wet winters to Gulf Coast states.

Because of the high economic stakes and public awareness, the El Niño of 1997- 1998 will be the most closely scrutinized in history. Timing has a great deal to do with the impact of rainfall on California. The winter season of 1997 - 1998 was one of the wettest on record across California, with typically double the normal amount of rainfall and about \$550 million in flood and storm damage statewide. However, the season previous, with only normal rainfall, had over triple the damage, at \$1.8 billion. This discrepancy appears to be best explained by timing of storms within the season and not the total seasonal rainfall. The following chart shows estimated statewide damage caused by storms and flooding in California since 1949. This data was compiled by the California Governor's Office of Emergency Services.

el niño returns

Ten Costliest Storms in California

Season	Type of Storm	Date(s)	Damage (\$ Billions)*
1994-95	Neither	January & March 1995	\$1.95
1996-97	Neither	December 1996 - January 1997	\$1.88
1982-83	El Niño	December 1982 - March 1983	\$1.44
1968-69	El Niño	Nov-Dec 1968/ Jan-Mar 1969	\$1.34
1955-56	Neither	December 19 - 27, 1955	\$1.20
1964-65	La Niña	December 19 - 24, 1964	\$1.13
1979-80	Neither	January - March 1980	\$0.71
1992-93	Neither	December 29, 1992/ January 5 - 19, 1993	\$0.68
1985-86	Neither	February 11 - 20, 1986	\$0.61
1997-98	El Niño	December 1997 - April 1998	\$0.55

* Damage is calculated in 1998 Dollars

El Niño and Our Agriculture

The impacts of the 1997 - 1998 El Niño storms held off until January 1998. Precipitation records were broken all over the state and 42 of California's 58 counties, including Kern, were declared major disaster areas.

Despite the blossoming of almonds and cherries, bees were hiding in hives rather than pollinating. The cherry crop suffered in quantity and quality due to rain during bloom, ripening, and harvest. Almonds, walnuts, and pistachios were slow to develop. Stone fruit suffered brown rot. Bunch rot became a concern in table grapes. Fungal problems abounded in orchards and vineyards. Stone fruit trees suffered damaged roots as they stood in totally saturated soil. Romaine lettuce shortages frustrated grocers and restaurateurs. Many planted cotton fields were later plowed under for failure to thrive. Standing water delayed spring planting of tomatoes and field crops. Inaccessibility hindered or prevented normal cultural activities. Alfalfa was made moldy by rain. The land remained wet for the first half of 1998 resulting in delayed planting, damaged produce, and high supermarket prices for California fruits and vegetables.

The precipitation total, as a percentage of normal, in Bakersfield was 247%. Kern County's Disaster Report for the month of February showed significant damage in Potatoes, Almonds, Onions, Alfalfa, Carrots, Lettuce, Sugar Beets, Wheat, Corn Silage, Peaches, and Oats, totaling over \$5.1 million and a loss of nearly 3,000 acres. Cattle, Dairy Cows and Calves, Apiary, Farm Structures, Machinery and Equipment, and Land Damages added another \$300,000 in damages to report. Kern County's Cherry crop was hit hard with nearly \$4 million in losses from 77% of Bearing Acres lost due to rain damage. 11

Deputy Commissioner

1999

Mr. Bill Lyons, Secretary
California Dept. of Food & Agriculture
-and-
The Honorable Board of Supervisors
County of Kern

In accordance with Section 2279 of the California Food and Agriculture Code, I submit the Agricultural Crop Report for 1999.

The 1999 total value of agricultural commodities produced in Kern County is \$2,129,569,400. This represents a 2% increase from the 1998 crop value. Kern County continues to exceed the \$2 Billion mark.

The total value for all citrus combined decreased 42% due to the December 1998 freeze. Due to the 1998-1999 citrus season freeze, total values for lemons decreased 90%, Valencia oranges decreased 85%, grapefruit decreased 84%, tangerines and tangelos decreased 54%, processing citrus decreased by 33% and Navel oranges decreased 17%.

Total harvested acres were up by 1.6%. Fruit and Nut harvested acres were up 7.5% and bearing cherry acreage increased 32%. As a result of the losses incurred by citrus and almonds, cotton is again the number two commodity. Cotton rebounded with an increase in the production per acre by 48%.

These figures represent a **Gross** receipt of producers and **do not** take into account the various costs of production, marketing, or transportation. **No attempt is made to reflect net income of the producer.**

Respectfully submitted,

A handwritten signature in black ink, appearing to read "Theodore K. Davis", is written over a horizontal line.

Theodore K. Davis
Agricultural Commissioner

*Revised

a/ Almond production stated in terms of Nut Meat Equivalents.

b/ Acres, total production, and total value included in Miscellaneous Fruit & Nut.

c/ Production per acre was derived from total bearing acreage, although only a portion of those acres were harvested due to the December 1998 Freeze. The freeze was devastating to the 1998 - 1999 Citrus Season Crop.

d/ Total production includes raisins on a Fresh Equivalent basis.

e/ A combined value reflecting free tonnage and reserve tonnage.

Dry Ratio: 1998 - 4.80 to 1 1999 - 4.50 to 1

f/ Pistachio and walnut production stated in terms of In-shell Equivalents.

g/ Includes: Blueberries, Bushberries, Chestnut, Dates, Figs (Fresh & Dry), Kumquats, Ollaliberries, All Pears, Pecans, Persimmons, Pomegranates, Processing Apricots, Peaches and Strawberries, Prunes, Raisin Grapes for Juice Use, Raspberries, and Strawberries.

h/ Includes: Blueberries, Boysenberries, Cherries, Figs (Fresh & Dry), Kumquats, Ollaliberries, All Pears, Pecans, Persimmons, Pomegranates, Processing Apricots and Peaches, Prunes, Raspberries, Strawberries and Wine Grapes for Juice Use .

1999 Crop Value Summary

1999 PEST PREVENTION AND CONTROL

Pest Eradication

<u>Mechanism</u>	<u>Pests</u>	<u>Scope of Program</u>
Survey & Eradication	Citrus Tristeza Virus, Dalmatian Toadflax, Harmel, Scotch Thistle and Spotted Knapweed	310 Hours
Biocontrol Releases	Purple Loosestrife and Yellow Starthistle	64 Hours
Trapping*	Pink Bollworm	429 Natives Detected
Sterile Release*		1,242 Fields
Plowdown		181,810 Acres

*Cooperative Pink Bollworm Project

Pest Exclusion

<u>Interception</u>	<u>Total Findings</u>	<u>Pathway</u>
Live Pest	31	Post Office, Parcel Post, Truck
Improper Certification	85	Post Office, Parcel Post, Truck
Labeling	42	Post Office, Parcel Post

Kern County intercepted 4 "Q" rated and 24 "C" rated pests in 1999.

Pest Detection/Trapping

<u>Trap Name</u>	<u>Number of Traps Deployed</u>
Jackson Trap (Medfly, Oriental and Melon Fruit Flies)	1,100
McPhail Trap	180
Delta Trap (Gypsy Moth)	350
Japanese Beetle Trap	300
Khapra Beetle Trogotrap	95
European Corn Borer Trap	20
European Pine Shoot Moth	10

<u>Exotic Pests Trapped</u>	
Sterile Mediterranean Fruit Flies	17
Sterile Mexican Fruit Flies	1

Biological Control Activities

<u>Pest</u>	<u>Agent</u>	<u>Scope of Program</u>
Purple Loosestrife	Leaf Beetle	1 site
<u>Lythrum salicaria</u>	<u>Galerucella spp.</u>	400 adult Beetles
Yellow Starthistle	Hairy Weevil	5 sites
<u>Centaurea solstitialis</u>	<u>Eustenopus villosus</u>	1,000 adult Weevils
	Flower Weevil	1 site
	<u>Larinus curtus</u>	200 adult Weevils
