INTRODUCTION

Leo Polopolus, Professor
Food and Resource Economics Department
University of Florida

This 1992 Symposium, "The Future Role of Agricultural Economists and the AAEA in Economic Education", is designed to provide a forum for a thorough discussion and evaluation of the topic. Special attention has been given to such subject areas as the relative efficiency of youth education versus adult extension education, the comparative advantages of agricultural economists in economic education, urban versus traditional agricultural emphasis, and the delivery mechanisms appropriate for youth oriented materials.

The first presentation by Robert Usry is intended to raise some basic questions regarding the relative efficiency in targeting youth audiences versus adult audiences. How do we optimize the delivery of economic education materials. Adult audiences provide better chances for immediate results from economic education. On the other hand, delivery of economic education to youth audiences may require a longer time horizon for payoff, but the payoff may be more significant.

The second presentation by Bruce Godfrey is designed to focus upon the subject matter. What special skills do agricultural economists have in developing the economics education curriculum? In addition to our traditional role in farm business management and marketing, do we have a comparative advantage with natural resource economics, community and rural development, and international trade and development? Also, how can agricultural economists cooperate with other agricultural science disciplines in developing more meaningful curricula that are appealing to students inside, as well as outside, agricultural programs?

The third presentation by Walter Armbruster relies upon the Farm Foundation's prior experience and involvement with economic and policy education for youth. Some of the issues raised in this paper include the following: what is the role of public policy education for America's youth; how does one improve the level of cooperation among the leading agricultural youth organizations (4-H, FFA, Ag in the Classroom, and AIC) with economics education; and how can the exposure of agricultural economics and related subject areas be expanded with the urban youth of America?

Finally, this forum seeks to explore/debate the incentives needed by professional agricultural economists to modify their extension, research, and/or teaching programs to include economics education for youth. Is the reward structure of tenure and promotion fully or equitably applied in academia for individuals committed to economics education programs? Would a mini-grant program of \$5,000 or more provide sufficient incentives to lure agricultural economists into economics education programs for youth?

Hopefully, the content of this Symposium will assist the profession and the Association in charting future directions regarding economic education programs for America's youth.
