# AGRICULTURAL OUTLOOK CHARTS

*Fruits and  
Vegetables*

BAAE

U. S. DEPARTMENT  
OF AGRICULTURE

U.S. BUREAU OF AGRICULTURAL  
ECONOMICS

AGRICULTURAL MARKETING  
SERVICE

WASHINGTON, D. C.

OCTOBER 1940

OUTLOOK CHART SERIES

1941

The charts in this book have been selected by the Outlook Committees as those best adapted for presenting graphically the economic background for the respective commodities. Though the charts are as up-to-date as available data will permit, mimeographed data sheets will be mailed early in November for bringing to date, as of November 1, those charts and tables having monthly data. Many other charts which are useful in special cases but are not included in this booklet can be supplied upon request.

OUTLOOK CHART BOOKS FOR 1941

Demand, Credit and Prices	Dairy and Poultry
Farm Family Living	Fruits and Vegetables
Wheat, Rice and Dry Beans	Feed Grains, Fats and Oils
Cotton and Tobacco	Livestock

Copies of these chart books are sent to Outlook extension workers and are available for other Outlook workers.

WALL CHARTS - Wall charts, 30 x 40 inches in size, will be made by the Bureau on receipt of order for 10 cents each on blueprint paper, and for 20 cents each on blackline paper. Single bromide enlargements of charts and maps not included in this booklet will be made for 75 cents, or mounted on cloth for \$1.25 each; if 25 copies or more are ordered of any single one, however, they will be furnished at the 10 and 20-cent rate, depending upon the paper.

TO ORDER WALL CHARTS

- (1) List negative number, title, and kind of paper - blueprint or blackline.
- (2) Give name and address of individual to whom charts should be sent.
- (3) Make all remittances payable to the Treasurer of the United States, and send with order to Division of Economic Information, Bureau of Agricultural Economics, Washington, D. C.

## Cash Farm Income from Fruits, and Income of Industrial Workers, United States, 1924 - 40

U.S. DEPARTMENT OF AGRICULTURE

NEG 31725 BUREAU OF AGRICULTURAL ECONOMICS

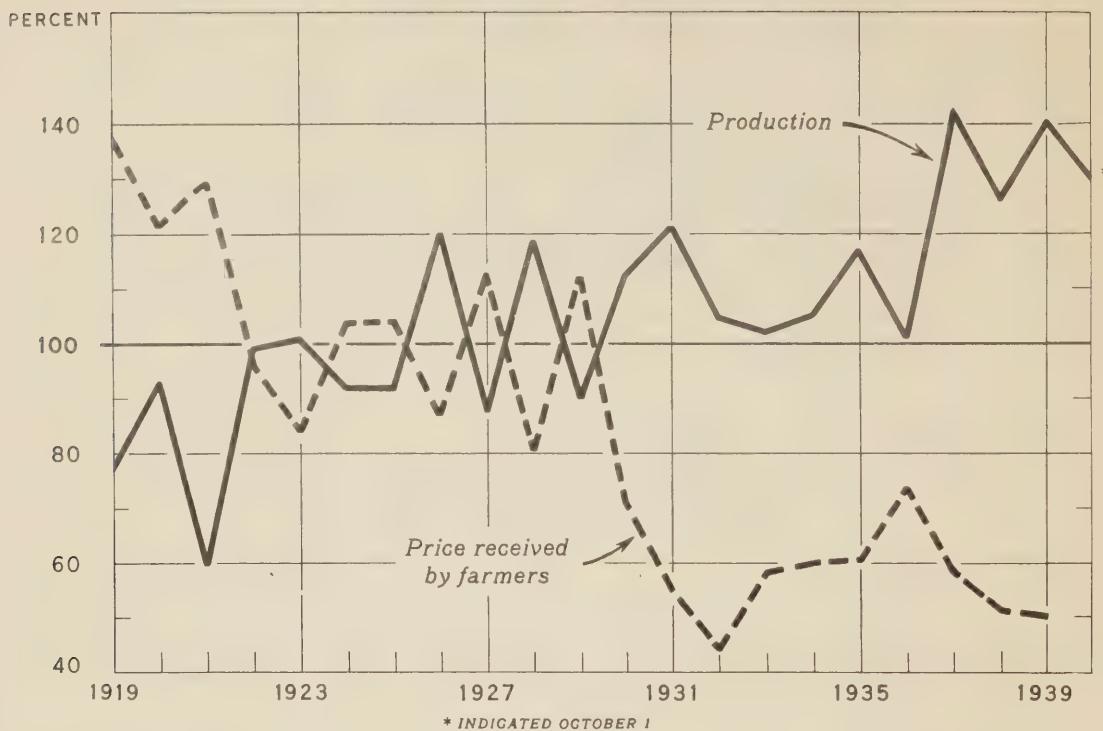

Changes in cash farm income from fruit production are closely associated with changes in the income of industrial workers. The prospect for 1941 is for some improvement in the income of industrial workers.

Cash farm income from fruits, and income of industrial workers, by months, United States, 1924-40

Index numbers (1924-29 = 100) adjusted for seasonal variation

## ALL FRUITS: PRODUCTION AND PRICE, UNITED STATES, 1919-40

INDEX NUMBERS (1924-29 = 100)

U.S. DEPARTMENT OF AGRICULTURE

NEG. 34628 BUREAU OF AGRICULTURAL ECONOMICS

The total volume of fruit production has increased considerably during the past 20 years, but the general level of fruit prices has declined during this period. There is a fairly pronounced inverse relationship between prices received by farmers for fruits and the quantity produced. However, the sharp decline in fruit prices during the early 1930's was also due to the sharp reduction in consumers' incomes in those years.

## All fruits: Production and price, United States, 1919-40

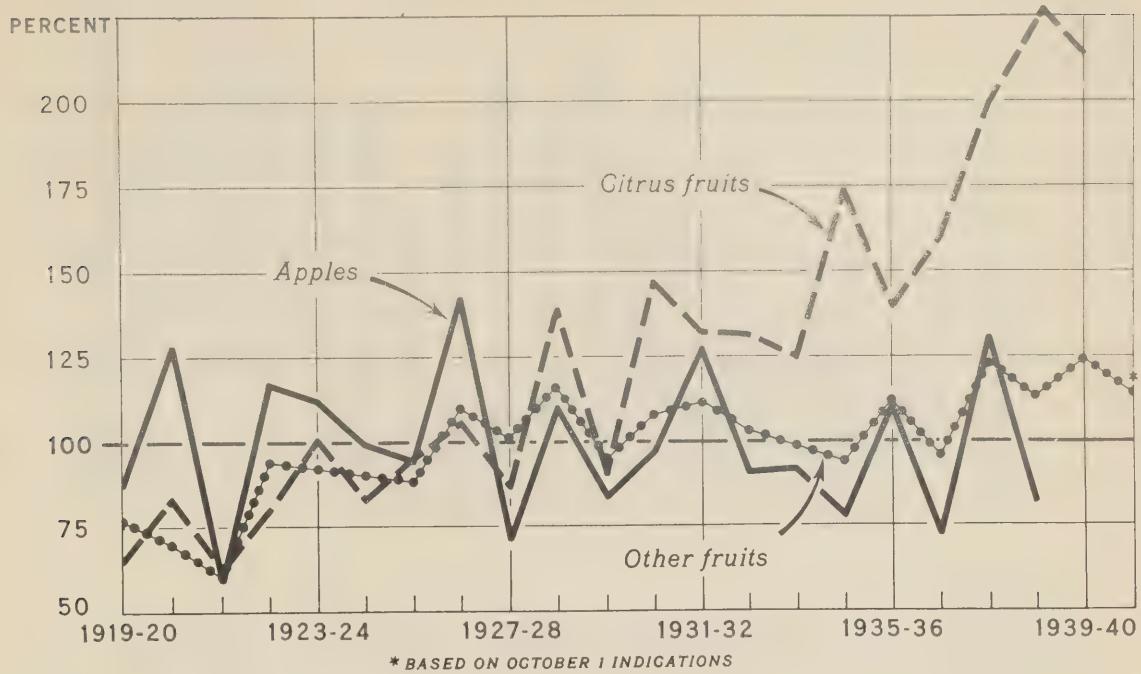

Index numbers (1924-29 = 100)

Crop year	Production	Price received by farmers
1919	77.8	136.9

**ALL FRUITS: PRODUCTION BY GROUPS,  
UNITED STATES, 1919-40**

INDEX NUMBERS (1924-29=100)

U. S. DEPARTMENT OF AGRICULTURE

Most of the expansion in total fruit production has been due to a sharp increase in production of citrus fruits, although there have also been increases in production of pears, cherries, apricots, plums and prunes. Apple production has fluctuated widely from year to year, but no marked upward or downward trend has been apparent since 1919.

NEG. 26426

BUREAU OF AGRICULTURAL ECONOMICS

## CANNED FRUITS: UNITED STATES PACK, 1919-39

U.S. DEPARTMENT OF AGRICULTURE

NEG. 34613 BUREAU OF AGRICULTURAL ECONOMICS

The total United States pack of canned fruit, including receipts of pineapple and grapefruit from Hawaii and Puerto Rico, has followed a steady upward trend during the last 2 decades, and the total for the 1939-40 season is the second largest on record. Since 1925 the pack of canned peaches has been at a much higher level than in previous years. A steady upward trend since 1919 has occurred in the receipts of pineapple and in the domestic packs of pears, cherries, plums and prunes, grapefruit, berries, olives, and salad and cocktail fruit. The canned packs of apples and apricots have shown no marked change in level.

1/ Including imports and shipments to United States from Hawaii and Puerto Rico.

**FRUIT AND TOMATO JUICES: UNITED STATES PACKS AND RECEIPTS  
FROM HAWAII AND PUERTO RICO, 1929-39**

U.S. DEPARTMENT OF AGRICULTURE

NEG. 34627

BUREAU OF AGRICULTURAL ECONOMICS

There has been a marked increase in the pack of fruit and tomato juices since 1929. Prior to that time grape juice and apple cider were the only unfermented juices packed in significant quantities. Since 1929, juices made from grapefruit, oranges, pineapples and other fruits have been packed commercially in increasing quantities. The increased consumption of fruit juices during the past decade reflects the upward trend in the production of fruits and an increase in consumer demand for fruit products in this form.

1/ Lemon juice, fruit nectars, and berry and other fruit juices are in actual cases.

2/ From surveys in Florida by Bureau of Foreign and Domestic Commerce, and reports of National Canners Association.

3/ Shipments from Puerto Rico to the United States in gallons converted to cases of 24 No. 2 cans at 3.375 gallons per case, from Bureau of Foreign and Domestic Commerce.

4/ From Surplus Marketing Administration and Bureau of Foreign and Domestic Commerce.

5/ From Western Canner and Packer.

6/ Shipments from Hawaii to the United States in pounds converted to cases of 24 No. 2 cans at 27 pounds per case, from Bureau of Foreign and Domestic Commerce.

7/ Biennial Census of Manufactures and Western Canner and Packer.

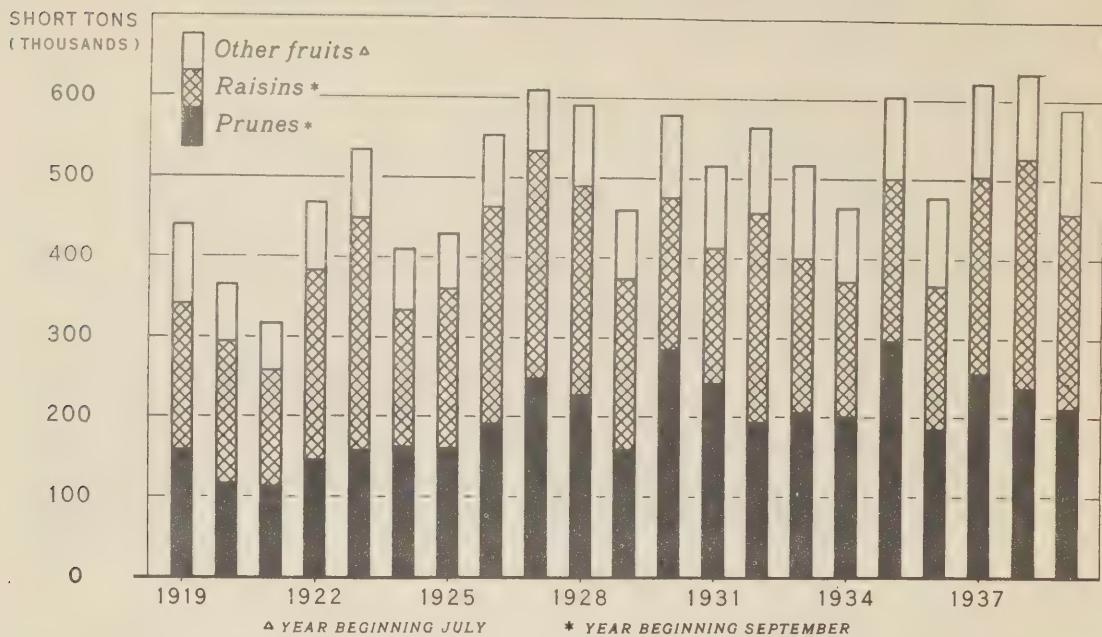

8/ Juice made from dried prunes, from Western Canner and Packer.

9/ Includes nectars made from apricots, peaches, pears, and fresh prunes, nectarines and others; and fruit juice from loganberries, blackberries, cherries, raspberries, strawberries, and apples, from Western Canner and Packer.

10/ National Canners Association.

11/ Preliminary.

## DRIED FRUITS: UNITED STATES PACK, 1919-39

U.S. DEPARTMENT OF AGRICULTURE

NEG. 34624 BUREAU OF AGRICULTURAL ECONOMICS

The total United States pack of dried fruits has fluctuated about a moderate upward trend during the past 20 years. The upward trend has resulted chiefly from steady increases in the pack of dried prunes, apricots, figs and dates. The pack of raisins has fluctuated widely from year to year but there has been no marked upward or downward trend in production.

## Apples: Total Production, and Indicated Production with Average Growing Conditions, U.S., 1909-38

U. S. DEPARTMENT OF AGRICULTURE

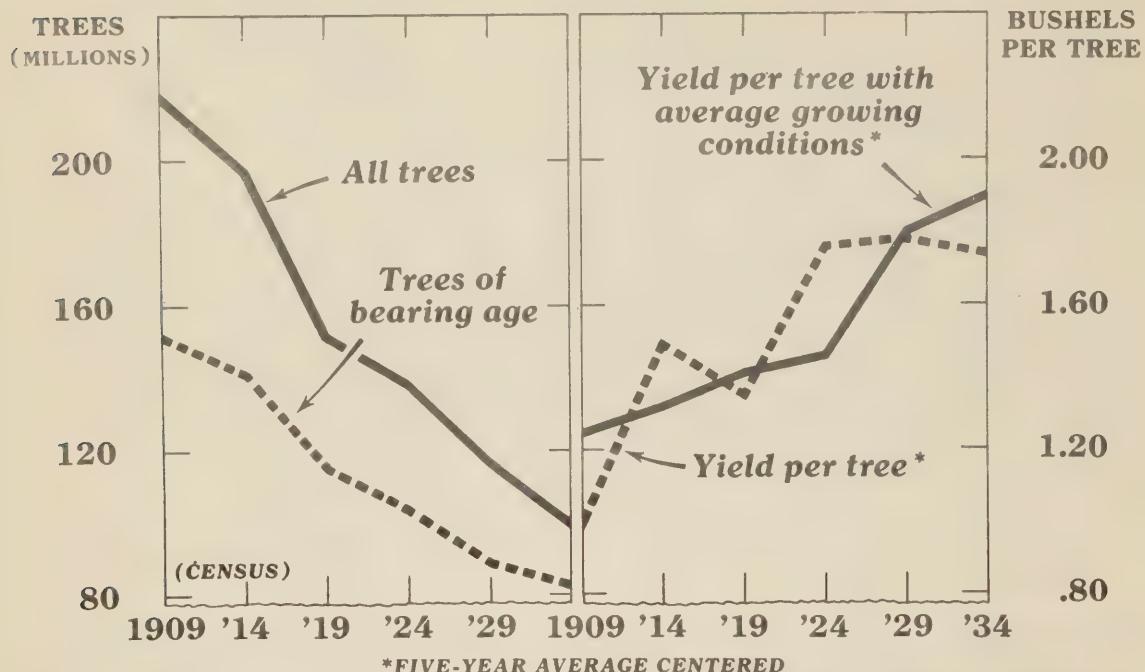

NEG. 29501-B BUREAU OF AGRICULTURAL ECONOMICS

Largely as a result of year-to-year changes in growing conditions the total production of apples has fluctuated widely during the past 30 years. There has been a moderate downward trend in apple production since the peak year of 1914.

Apples: Total and indicated production, United States, 1909-38

# Apples: Production, Cold-Storage Holdings, Exports, and Price, United States, 1910-40

U.S. DEPARTMENT OF AGRICULTURE

NEG. 20706-B BUREAU OF AGRICULTURAL ECONOMICS

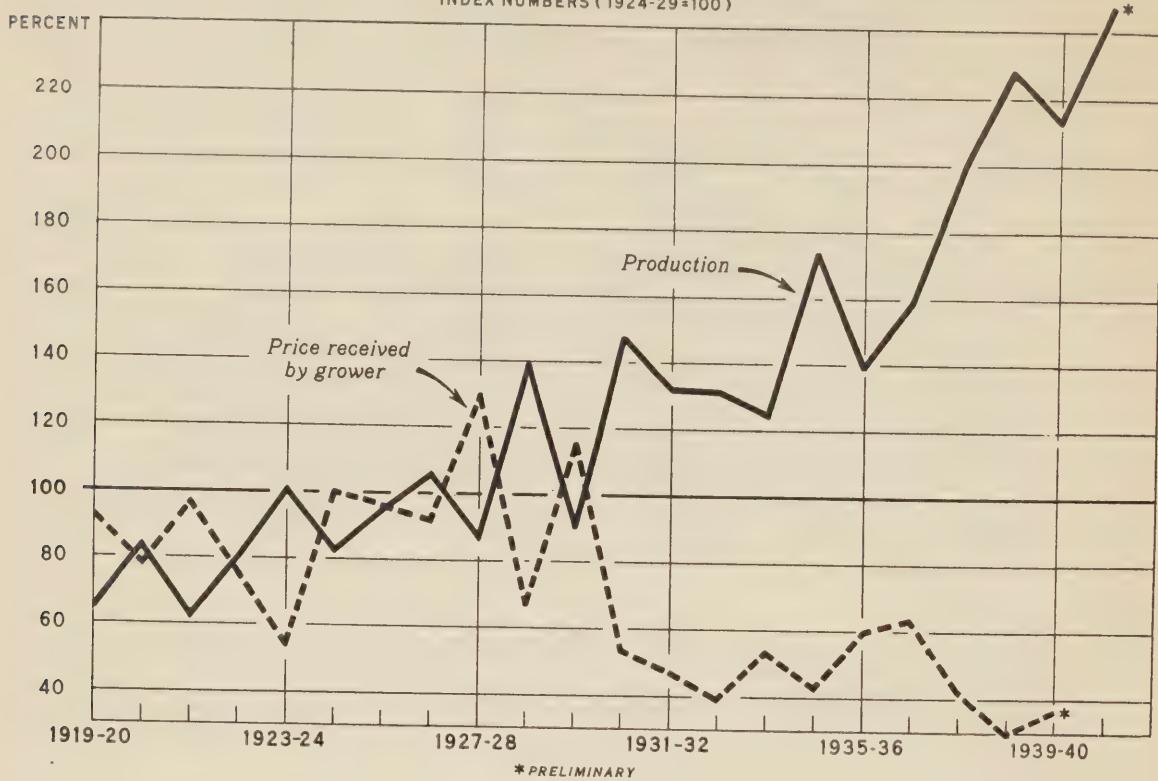

Total production of apples in the United States varies greatly from year to year. And although prices received by farmers for apples are affected to a considerable extent by consumer demand conditions, there is also some tendency for prices to vary inversely with the size of the crop. During recent years a large proportion of the apple crop has been placed in cold storage for late winter and spring shipments.

Apples: Production, cold-storage holdings, exports, and price, United States, 1910-40

Year begin-ning July	Production		: Dec. 1 cold stor-age holdings	Exports	: Price per bushel re-ceived by farmers

CITRUS FRUITS: PRODUCTION AND PRICE, UNITED STATES, 1919-40  
INDEX NUMBERS (1924-29=100)

U.S. DEPARTMENT OF AGRICULTURE

NEG. 29496

BUREAU OF AGRICULTURAL ECONOMICS

During the decade prior to 1930, when variations in consumer purchasing power were relatively minor, a marked inverse relationship is evident between total production of citrus fruits and citrus prices. The extremely low prices received for citrus fruits since 1930 are largely a result of sharp increases in supplies of citrus fruit and reduction in consumer purchasing power. A record crop is indicated for 1940.

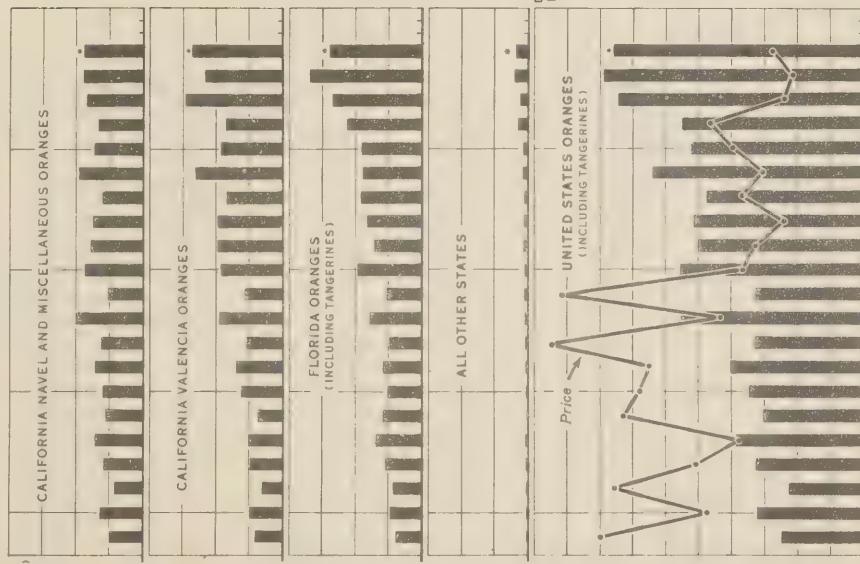

Citrus fruits: Production and price,

1/ Production in California includes the following quantities which have no farm value: 1933, 977,000 boxes; 1934, 1,495,000 boxes; 1935, 614,000 boxes; 1936, 1,023,000 boxes; 1937, 1,037,662,000 boxes.  
2/ Including tangerines.  
3/ Average price from all methods of sale.  
4/ Preliminary.  
5/ Indicated October 1.

The trend in orange production in the United States has been steadily upward during the past 20 years. This upward trend has been particularly marked in the production of Valencia oranges in California, and of all oranges in Florida. Prices received by growers have fluctuated considerably during this period. Although prices for oranges reflect changes in consumer income as well as changes in production, the upward trend in production during the past 20 years has been accompanied by a downward trend in prices received by growers.

<sup>a</sup>Preliminary.

During the decade 1919-29 grapefruit production in the United States followed a gradual upward trend. Since that period, the increase has been more pronounced, with production in Texas increasing at a more rapid rate than in other areas. Prices have not recovered from the low levels of the depression years following 1929, chiefly because of the rapid increase in production since that time.

**LEMONS: PRODUCTION AND PRICE, CALIFORNIA,  
AND NET TRADE, UNITED STATES, 1921-39**

U.S. DEPARTMENT OF AGRICULTURE

NEG. 31698 BUREAU OF AGRICULTURAL ECONOMICS

Both production and farm prices of lemons followed a gradual upward trend from 1921-22 to 1929-30. Since then production has continued to increase but the trend in prices has been mostly downward. Prior to 1929-30 annual imports of lemons were fairly large, but since that year exports have exceeded imports.

## PEARS: PRODUCTION AND PRICE, UNITED STATES, 1919-40

U.S. DEPARTMENT OF AGRICULTURE

NEG. 26431 BUREAU OF AGRICULTURAL ECONOMICS

Pear production in the United States has about doubled during the past 20 years. Most of the increase has been in the three Pacific Coast States, which now produce about two-thirds of the total crop. The upward trend in production has been reflected in a downward trend in prices received by farmers for pears.

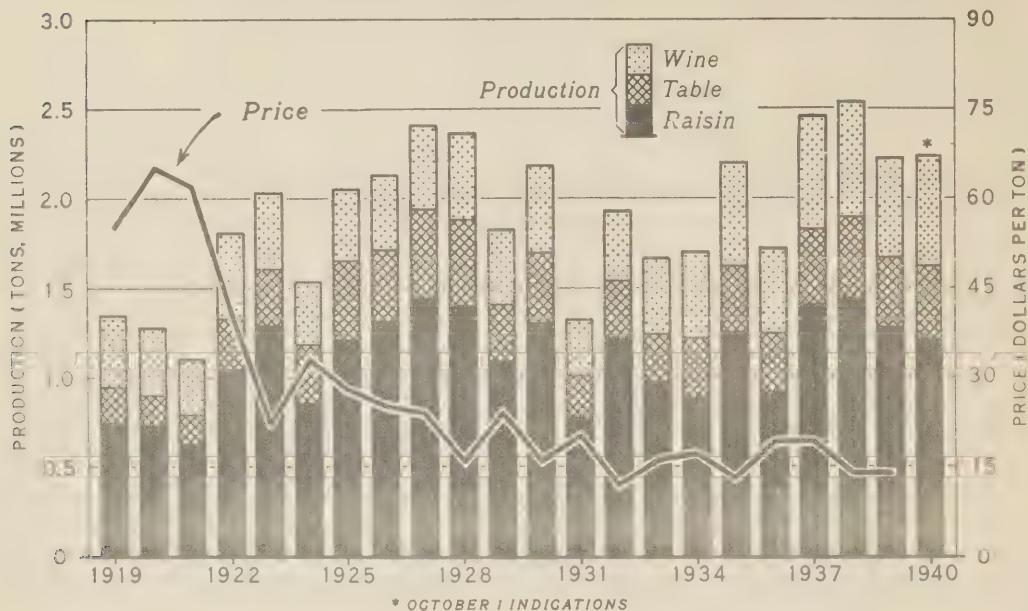

Pears: Production and price per bushel received by farmers, United States, 1919-40

**GRAPES: PRODUCTION, BY TYPES, AND WEIGHTED AVERAGE  
PRICE RECEIVED BY FARMERS, CALIFORNIA, 1919-40**

U. S. DEPARTMENT OF AGRICULTURE

NEG. 35718 A.A.A.

Grape production increased sharply from 1919-28. It was reduced in most of the next 8 years, however, as a result of unfavorable growing conditions and a decrease in bearing acreage. Production increased sharply in 1937, and it has remained relatively large since then. Prices received by farmers for grapes declined sharply in the early 1920's. A gradual decline was noticeable from 1924-30, but since then prices have remained fairly stable at a comparatively low level.

**GRAPES: TOTAL PRODUCTION AND PRICE RECEIVED BY FARMERS, UNITED STATES (EXCEPT CALIFORNIA,) 1919-40**

U. S. DEPARTMENT OF AGRICULTURE

NEG. 35716 A.A.A.

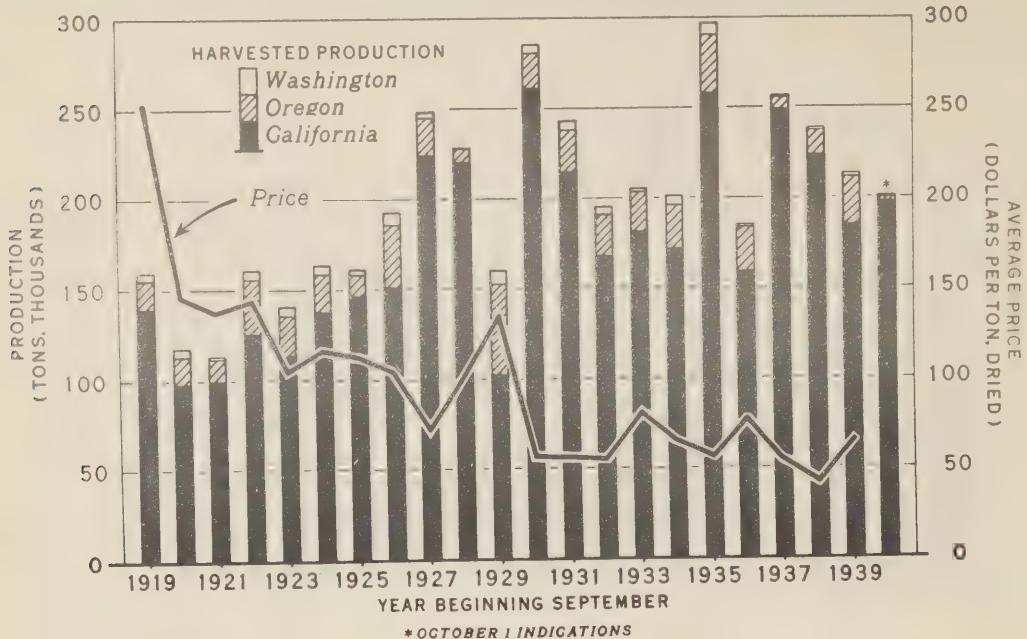

Except for several years when growing conditions were very unfavorable, production of grapes in States other than California has increased gradually since 1919. Prices of eastern grapes declined sharply from 1924-32; they have advanced somewhat since then but are still low compared with earlier years.

1/ Grapes produced outside California are almost exclusively of the labrusca or "Eastern" type, commonly known as "slip skins". 2/ Prices are preliminary. 3/ October 1 indications.

**DRIED PRUNES: PRODUCTION, BY STATES, AND AVERAGE PRICE RECEIVED BY FARMERS. 1919-40**

U. S. DEPARTMENT OF AGRICULTURE

NEG. 35719 A.A.A.

The production of dried prunes in the United States has fluctuated widely during the past 20 years. Since 1930 a downward trend in bearing acreage has been offset to some extent by increased yields resulting from favorable weather conditions. There has been some tendency for prune prices to vary inversely with production, but the trend in prices has been downward during the period.

1/ Approximate unprocessed weight.

2/ Production in France, exports only from other areas. Includes Bulgaria and Rumania since 1929.

3/ Preliminary estimates.

4/ October 1 indications.

**CHERRY PRODUCTION AND PRICES RECEIVED BY FARMERS, BY PRINCIPAL AREAS, 1924-40**

U.S. DEPARTMENT OF AGRICULTURE

The upward trend, which has characterized sweet cherry production for over a decade, was accentuated during the last 3 years by unusually favorable growing conditions. Farm prices have risen from the low level prevailing in 1932.

In the sour cherry states the wide fluctuation in production, which has occurred during the last 5 years, is more noticeable than the slight upward trend in total sour cherry production. Prices, which followed an upward trend from 1932-37, declined during 1938-39 and were relatively low in 1940.

Preliminary.

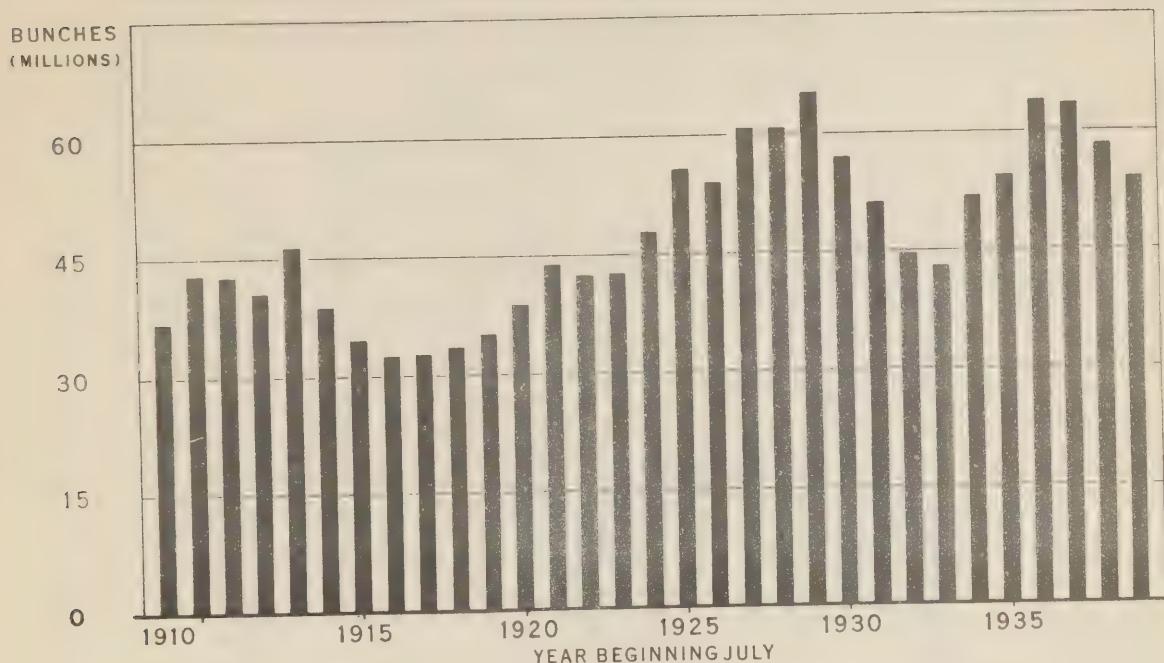

The production of strawberries in the far western States has increased sharply during the last decade. The increase in the late States has contributed largely to the upward trend in the late States. Production in the early States increased greatly from 1918-31, but in recent years remained below the 1931 peak production. Production has declined slightly in the second early States and remained about stable in the intermediate group. There has been a general downward trend in strawberry prices since 1920. Prices in recent years have shown some recovery from the low 1932 and 1933 prices.

\* WALNUT PRODUCTION FIGURES ADJUSTED FOR CARRY-OVER  
AND EXPORTS, AND PECAN FIGURES FOR EXPORTS

Per capita U. S. consumption of tree nuts produced domestically has shown an upward trend during the period covered by the chart. However, until 1934-35, consumption of imported tree nuts declined so rapidly that the total per capita consumption also declined. Since 1933-34 consumption of imported tree nuts and total consumption have both risen; neither, however, is back to its pre-depression level. (The chart overestimates consumption of domestically produced nuts in 1935-36 and underestimates it in 1936-37, because there was a sizeable carry-over of pecans from the earlier year into the later for which it has not been possible to make an adjustment.)

**PECANS: PRODUCTION AND DEC. 1 PRICE RECEIVED  
BY FARMERS, UNITED STATES, 1919-40**

U. S. DEPARTMENT OF AGRICULTURE

NEG. 26419

BUREAU OF AGRICULTURAL ECONOMICS

Production of pecans, particularly of seedlings, fluctuates widely from year to year. There has been a marked upward trend in the production of improved varieties, but production of seedlings has fluctuated around the same level during the last 15 years. Prices declined sharply in 1931 and the price of improved varieties has drifted even a little lower since then. The price of seedlings, however, in recent years has averaged considerably above the level of 1931 and 1932.

## Almonds: Production, and Price Received By Farmers California, and Net Imports, United States, 1919-40

U S DEPARTMENT OF AGRICULTURE

NEG. 26418-8 BUREAU OF AGRICULTURAL ECONOMICS

Although year-to-year fluctuations in the United States almond crop have been large, there has been a slight upward trend in production since 1919. Prior to 1929 imports of almonds were several times larger than domestic production. Imports decreased sharply with the decline in prices in 1930, however, and in most of the past 10 years domestic production has been larger than imports.

FILBERTS: OREGON AND WASHINGTON PRODUCTION, OREGON PRICE, AND U. S. IMPORTS FOR CONSUMPTION, 1919-40

U. S. DEPARTMENT OF AGRICULTURE

NEG. 34610

BUREAU OF AGRICULTURAL ECONOMICS

There has been a marked increase in the production of filberts in the United States since 1927, and it is expected that this upward trend will continue for several more years. In the 10 years prior to 1929-30 imports of filberts averaged around 12,000 tons annually. Since then imports have decreased sharply, and in 1939-40 they were a little smaller than domestic production. Prices received by farmers for filberts have shown a declining tendency during the 11 years of record.

U.S. DEPARTMENT OF AGRICULTURE

BUREAU OF AGRICULTURAL ECONOMICS

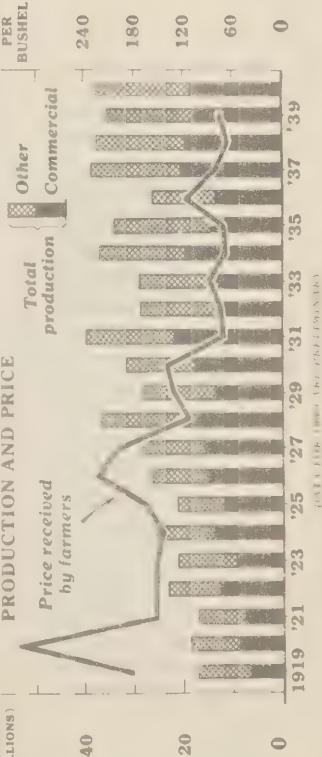

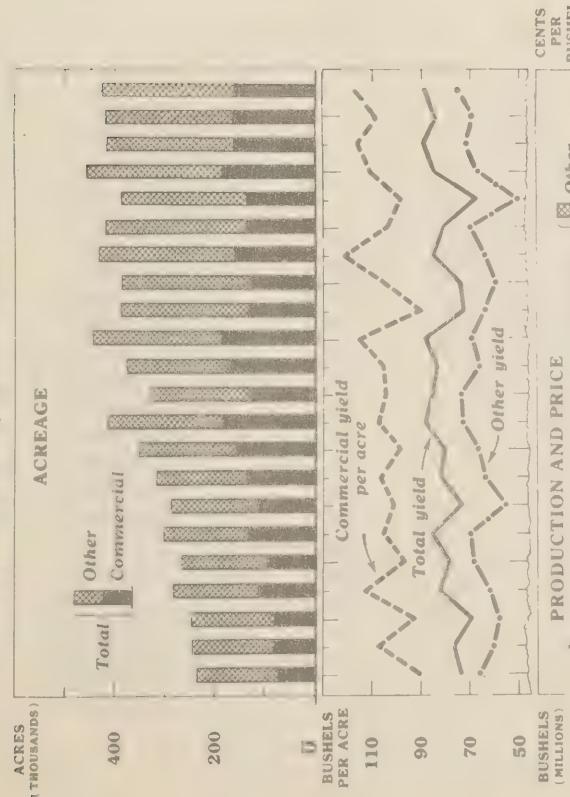

MEG 26465 B

This total acreage of potatoes in the United States was reduced sharply in 1936, and it has remained at a comparatively low level for the past 5 years. This reduction in acreage has been about offset by an increase in yields, however, and the total production of potatoes has remained as large as in most years since 1909. Prices received by farmers for potatoes tend to vary inversely with changes in production.

1/ Preliminary. Although the acreage of potatoes in the United States during the past 10 years has been on a lower level than in the previous decade, increased yields have kept production at about the same level. Farm prices of potatoes usually vary inversely with production.

Potatoes: Acreage, Yield, Production, and  
Price, 11 Early States, 1919-40

Potatoes: Acreage, yield per acre, production, and price, 11 early States, 1919-40

U.S. DEPARTMENT OF AGRICULTURE  
BUREAU OF AGRICULTURAL ECONOMICS

There has been an upward trend in the production of potatoes in the early-producing States during the past 20 years. The increase has been due chiefly to expanding acreage, although yields per acre also have increased moderately since 1919. The trend in prices received by farmers has been downward since 1920.

1/ Preliminary.

## Potatoes: Acreage, Yield, Production, and Price, 7 Intermediate States, 1919-40

DATA FOR 1940 ARE PRELIMINARY

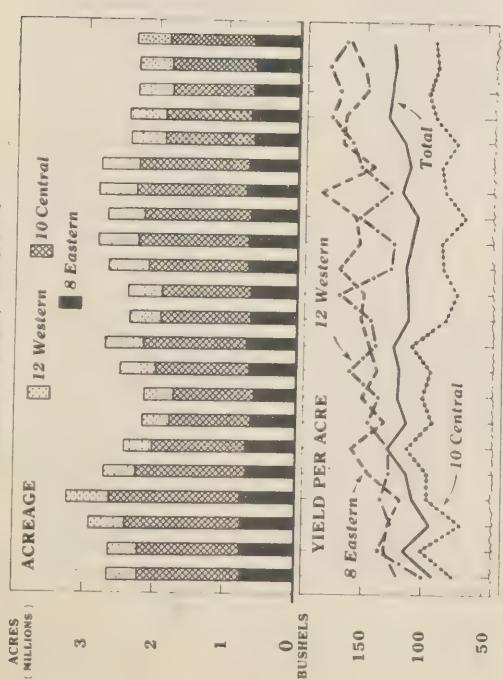

U. S. DEPARTMENT OF AGRICULTURE  
BUREAU OF AGRICULTURAL ECONOMICS  
Acreage of potatoes in the intermediate-producing States has decreased fairly steadily during the past 20 years, and production also has fluctuated about a downward trend. The trend in prices received by farmers in this region has been downward over a long period.

1/ Preliminary.

ACREAGE OF POTATOES IN THE INTERMEDIATE-PRODUCING STATES HAS DECREASED FAIRLY STEADILY DURING THE PAST 20 YEARS, AND PRODUCTION ALSO HAS FLUCTUATED ABOUT A DOWNWARD TREND. THE TREND IN PRICES RECEIVED BY FARMERS IN THIS REGION HAS BEEN DOWNWARD OVER A LONG PERIOD.

HIGHWAY & BUREAU OF AGRICULTURAL ECONOMICS  
U. S. DEPARTMENT OF AGRICULTURE  
Potato production in the 30 late States fluctuates widely from year to year. The shifts in both acreage and production in the 10 central States cause most of the fluctuations in the total late crop. While the acreage in the 8 Eastern States has been declining slightly both yields and production have been increasing. Over the long time, production in the Western States has been at a uniform level.

DATA FOR 1940 ARE PRELIMINARY

BUREAU OF AGRICULTURAL ECONOMICS

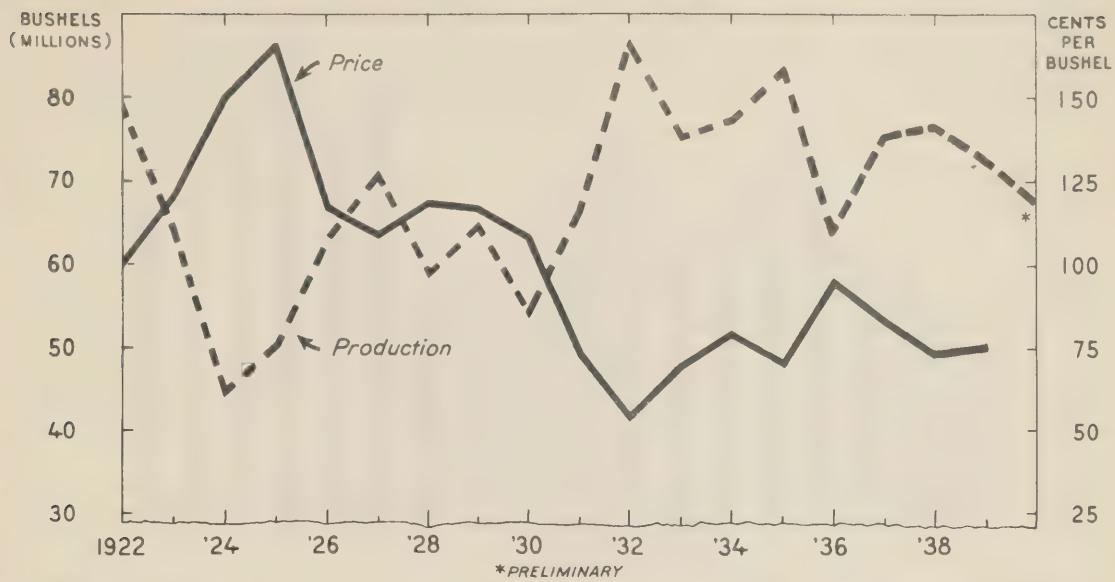

U. S. DEPARTMENT OF AGRICULTURE NO. 254668

Most of the sweetpotatoes are produced in the Southern Cotton States for use as food and feed in the locality where grown. The small proportion of the crop produced in the Middle Atlantic States, together with that produced in Kentucky, Tennessee, and Louisiana, constitute the bulk of the marketed supply.

<sup>1/</sup> Includes States where commercial sweetpotato production is chiefly of dry-flested types for shipment to northern markets.

<sup>2/</sup> Preliminary.

## Sweetpotatoes: Production and Price Received By Farmers, United States, 1922-40

U.S. DEPARTMENT OF AGRICULTURE\*

NEG 20614-B BUREAU OF AGRICULTURAL ECONOMICS

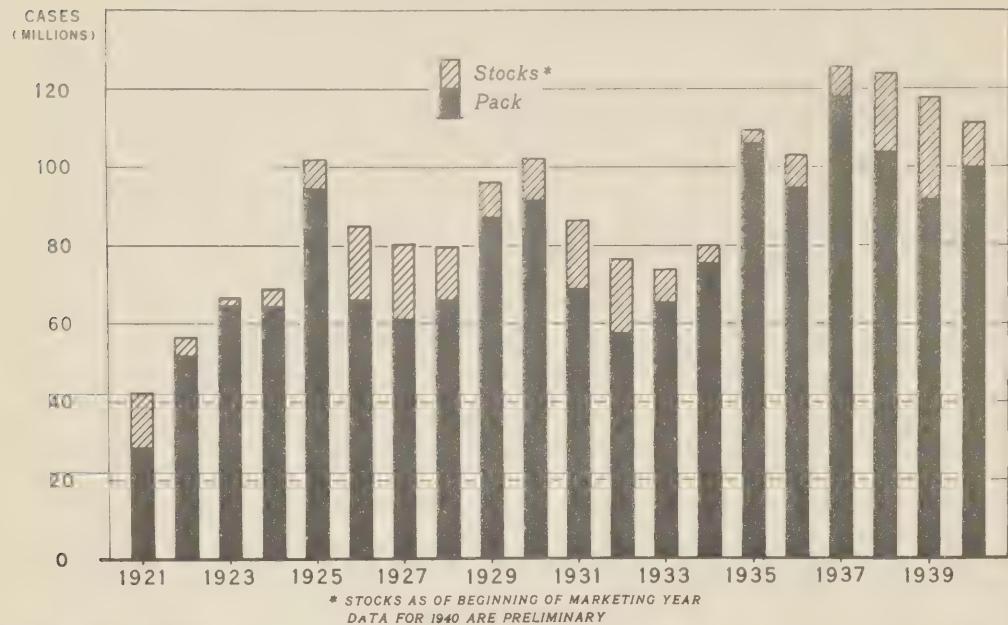

Sweetpotato production has fluctuated about an upward trend since 1924 and prices received by farmers have tended downward during this period. In most years there is a fairly marked inverse relationship between production and prices of sweetpotatoes.

Sweetpotatoes: Production, and average price per bushel received by farmers, United States, 1922-40

**VEGETABLES, CANNED: ANNUAL PACK AND CARRY-OVER, UNITED STATES, 1921-40**

U. S. DEPARTMENT OF AGRICULTURE

NEG. 32744

BUREAU OF AGRICULTURAL ECONOMICS

The total supply of canned vegetables has fluctuated in fairly regular cycles about an upward trend during the past 20 years. There has been some tendency for small annual packs to be offset by relatively large carry-over stocks; therefore, the total supply of canned vegetables has fluctuated less than the annual pack.

<sup>1/</sup> Preliminary.

There has been a marked expansion in the acreage and production of fresh vegetables for market during the past 20 years, despite a downward trend in the prices received by farmers during this period. The total value of these crops increased steadily from 1919-29, but the sharp decline in prices in the early 1930's was reflected in a similar reduction in value. Since 1933 the total value of fresh vegetables produced has risen considerably more than prices, due to the continued upward trend in production.

**ACREAGE OF COMMERCIAL TRUCK CROPS\* AND  
VALUE PER ACRE, BY REGIONS, 1919-40**

U. S. DEPARTMENT OF AGRICULTURE

NEG. 31767

BUREAU OF AGRICULTURAL ECONOMICS

Acreages of commercial truck crops for market, and for cannery and manufacture have been increased in all regions during the past 20 years. The most rapid expansion occurred in the western group of States. Year to year fluctuations in the total acreage planted are accounted for largely by shifts in the North Central region. The value per acre has tended downward in all regions, showing the greatest decline in the Western States and the least in the North Central States.

DATA FOR 1940 ARE PRELIMINARY  
\*ASPARAGUS, SNAP BEANS, CABBAGE FOR KRAUT, SWEET CORN, CUCUMBERS FOR PICKLES  
GREEN PEAS, SPINACH, TOMATOES

U.S. DEPARTMENT OF AGRICULTURE

NEC. 26484 BUREAU OF AGRICULTURAL ECONOMICS

During the past 20 years acreage and production of vegetables for manufacture have fluctuated in fairly regular cycles about a marked upward trend. Although the total value of these crops has been closely associated with year-to-year changes in production, it has remained at about a constant level during the period because the upward trend in production has been about offset by a downward trend in prices since 1920.

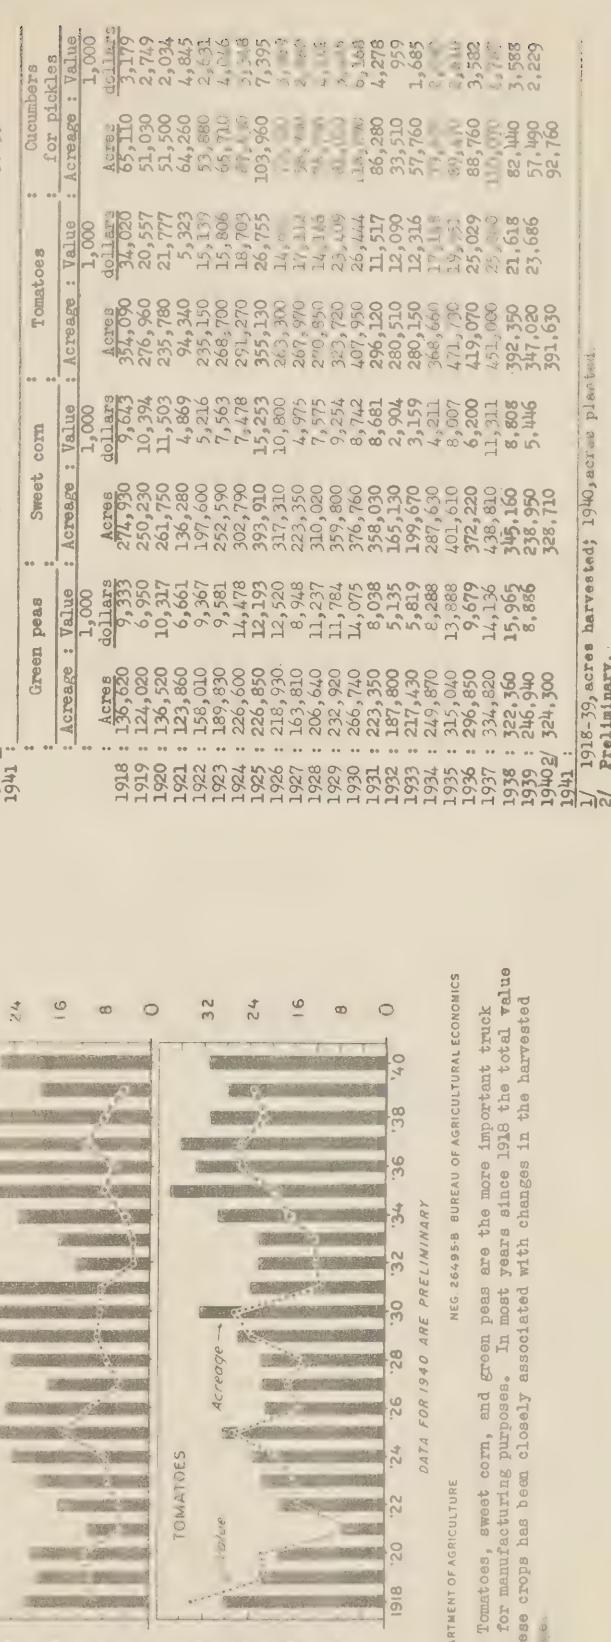

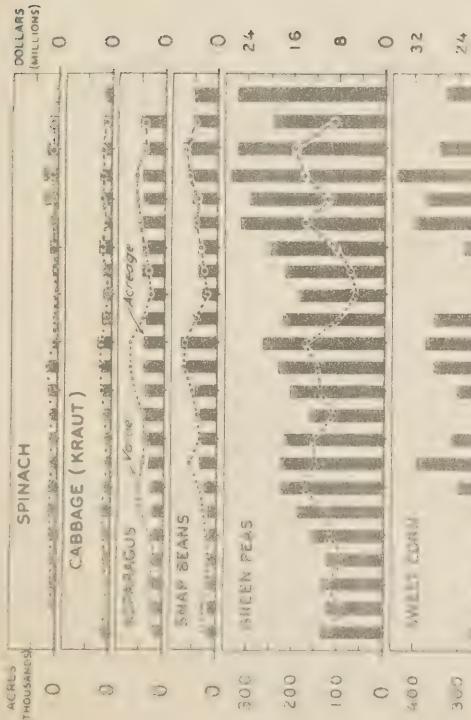

1/ Includes asparagus, snap beans, cabbage for kraut, sweet corn, cucumbers for pickles, green peas, spinach, tomatoes.

2/ Preliminary.

Although there have been fairly regular cyclical shifts in the acreage of vegetables for manufacture, the trend has been slightly upward. During the past decade or more changes in production and total value of these vegetables have been closely associated with those of acreage. Yields, value per acre, and prices declined to 1932 but have recovered somewhat in recent years.

Eight commercial truck crops for manufacture: Acreage and value, United States: 1918-40 1/2

## 7 Commercial Truck Crops for Manufacture: Acreage and Value, U. S., 1918-40

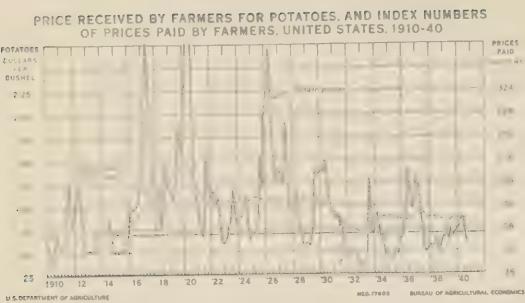

U. S. DEPARTMENT OF AGRICULTURE  
NEG. 26495-B BUREAU OF AGRICULTURAL ECONOMICS

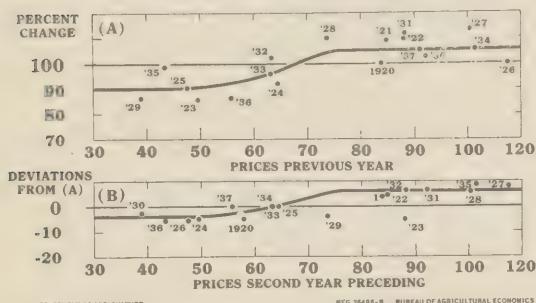

Tomatoes, sweet corn, and green peas are the more important truck crops for manufacturing purposes. In most years since 1918 the total value of these crops has been closely associated with changes in the harvested acreage.

1/ 1918-29, acres harvested; 1940, acres planted.  
2/ Preliminary.

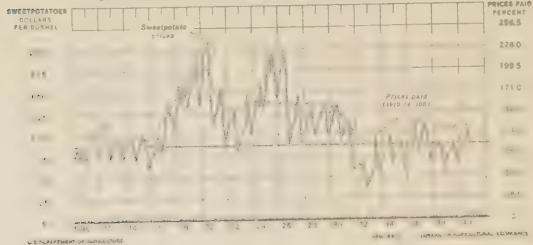

DATA FOR 1940 ARE PRELIMINARY
