University of Florida

Brent Gloy
Department of Applied Economics and Management
Cornell University

Slide 1

Reducing Risk to Expand Capacity for Value-Added Risk in Agriculture

NC-1014 – St. Louis
By
Michael Gunderson and Brent Gloy

Slide 2

Risk In Agriculture

- Risk is widespread in agriculture
  - Output prices, yields, input prices, weather, interest rates, human resources, liability……
- Traditionally farmers have self-insured most of these risks

Slide 3

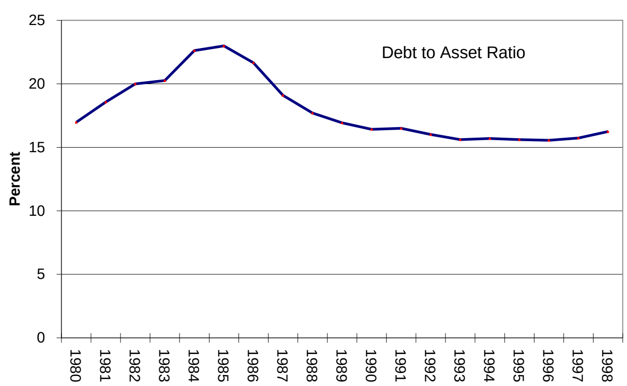
Risk Bearing Capacity and Risk Balancing

- Dominant paradigm when thinking about business level risks is the risk balancing hypothesis
  - – Tradeoff between business risk and financial risk
  - – Result is that as business risk increases the firm’s ability to handle financial risk declines

Slide 4

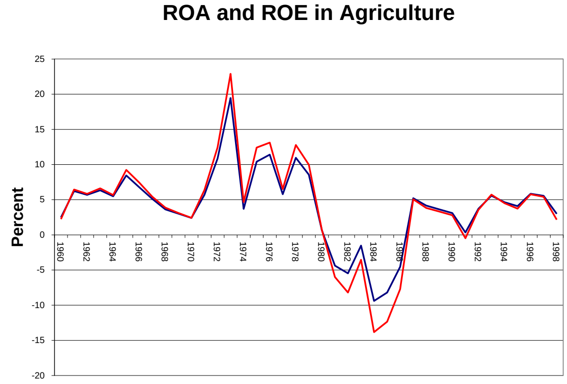
Result is Relatively Low Levels of Debt Use in Agriculture

Debt Use in the United States 1980 - 1998

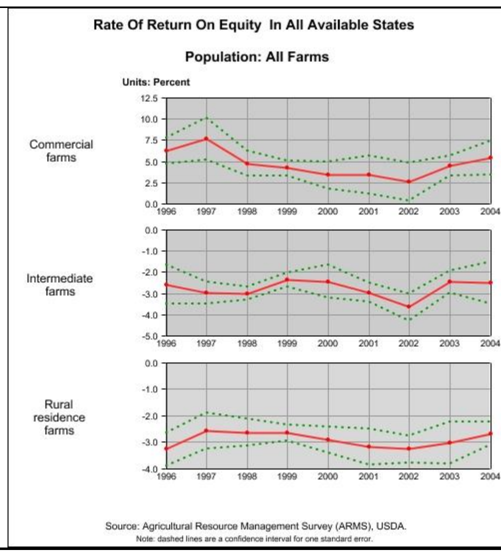


Slide 5

Impact is that ROE is Relatively Low in Agriculture



Slide 6



Slide 7

Risk and Leverage in Agriculture

- The relatively high level of business risk limits debt use
- Limited debt use limits ability to generate rates of return on equity that would attract outside capital
- If one could manage the risk and maintain average rate of return on assets with sound management it may be possible to greatly improve ROE without tremendously increasing total risk

Slide 8

Perspectives on Risk and Leverage

- Merton views equity as the ultimate insurance policy
  - The more risk you have the more equity you must hold against that risk
  - The important question then becomes what types of risks is the firm using equity to insure against
  - Complementary to risk balancing but a fundamentally different approach/view

Slide 9

Thinking About Risks

- Merton defines:
  - Value adding risks – those that the firm reasonably has some advantage in managing
  - Passive risks – risks inherent in the business for which others would likely have an advantage managing
- Owners job is to decide which risks are likely value adding and which are passive
- Why hold precious equity to insure passive risks?

Slide 10

Value Adding and Passive Risks in Agriculture

- Passive risks – price risks, liability, non-systematic yield risks (weather?)
- Value adding – systematic yield risks, human resource risks
- Plenty of tools available to manage the risks and new approaches constantly under development

Slide 11

The Study

- Examine the extent to which firms could use greater amounts of leverage by outsourcing risks
- Set in the dairy industry
  - – Identify risks and market for these risks
  - – Simulate returns and ability to handle leverage

Slide 12

Where We're at

- Financial model built and data collected
- Key risks
  - – Prices – milk – contracting and futures, beef – contracting and futures
  - – Inputs – feed cost ratio – corn, bean, alfalfa, heifers
