California Department of Food and Agriculture

Agricultural Commissioners' Crop Reports

El Dorado County

1967-1977

California County Agricultural Commissioners' Reports from the California Department of Food and Agriculture. This collection consists of annual crop and livestock data from each of the 58 California Counties. The collection covers 1915-1981; digitization of the rest of the collection is forthcoming.

This digitization project was funded by the Giannini Foundation of Agricultural Economics,
<http://giannini.ucop.edu/>.

The work was completed by the staff of the Giannini Foundation Library, University of California, Berkeley, <http://are.berkeley.edu/library/>. **Please contact the Library to consult the originals.**

Gentlemen:

In accordance with the Provisions of Section 2279, of the California Agricultural Code, I herewith submit the 1967 El Dorado County Crop Report.

The picture, on the cover of the report, adequately portrays the result of 7 years of combined effort by the El Dorado County Farm Advisor's Office, the El Dorado County Pear Industry, and that of this office. Dick Bethell, El Dorado County Farm Advisor, should be particularly complimented for his thoroughness and far-sightedness that made the development of these new pear rootstocks possible. These vigorous rootstocks are now available on a limited basis to El Dorado County pear growers.

The 1967 fresh fruit production, in El Dorado County, was severely affected by adverse weather during bloom. Most pear orchards continue to show improvement, and the possibility of complete orchard recovery is becoming more of a reality - especially now that suitable replant trees are becoming available.

The production returns stated in this report are F.O.B. the plant and do not reflect net returns or the profit realized by the grower.

This report was compiled by Merco Petach, Agricultural Inspector with our Department.

I wish to express my appreciation to the many individuals and organizations that so willingly cooperated in the contribution of information necessary to make this report possible.

Respectfully submitted,

Edio P. Delfino

Edio P. Delfino
Agricultural Commissioner

Gentlemen:

In accordance with Provisions of Section 2279, of the California Agricultural Code, I herewith submit the 1968 El Dorado County Crop Report.

El Dorado County Agriculture, in 1968, experienced its most successful and profitable year since the beginning of pear decline (1959). The pear and apple crop production was adequate in most cases and of excellent quality. Prices received by growers were good. Several orchards were severely affected by late frost and in these cases experienced a poor season.

It is heartening to note that the agricultural industry of this county has come back strongly, from the disaster of pear decline, to again take its rightful place in the county's economy. El Dorado County's agriculture has now retrenched after pear decline and is now exhibiting new vigor in production, packing and marketing. Some of the examples of this new strength are:

1. New vigorous decline resistant pear trees are now available to El Dorado County growers. (A six year effort was required to achieve this result).
2. Apple Hill promotion program continues to be successful. Results of this promotion have had a decided effect on the local economy.
3. The implementation of the California Land Conservation Act in El Dorado County will help stabilize the county's animal industry.
4. Late plum and cherry production offers new and profitable crops for El Dorado County agriculture.
5. Christmas tree plantations are producing high quality Christmas trees for both choose and cut and wholesale market outlets. This industry is growing rapidly in the county.

Please note that production returns stated in this report are F.O.B. the plant and do not reflect net returns or the profit realized by the grower.

This report was compiled by Merco Petach, Agricultural Inspector, with our Department.

I wish to express my appreciation to the many individuals and organizations that so willingly cooperated in the contribution of information necessary to make this report possible.

Respectfully submitted,

Edio P. Delfino
Agricultural Commissioner

Exciting Prospects for Agriculture

in Beautiful

EL DORADO COUNTY

PREPARED BY
THE AGRICULTURAL COUNCIL OF THE EL DORADO COUNTY CHAMBER OF COMMERCE
IN COOPERATION WITH
EL DORADO COUNTY DEPARTMENT OF AGRICULTURE
AND
THE AGRICULTURAL EXTENSION SERVICE OF EL DORADO COUNTY

EL DORADO COUNTY CHAMBER OF COMMERCE

INTRODUCTION

Agriculture is a prime industry in El Dorado County. It was established prior to the discovery of gold at Coloma in 1848. Through the years agriculture has served as the primary vehicle for the development of roads, irrigation and utilities in the county.

During the early 1960's pear decline and the beef industry's cost-price squeeze created a poor image for the future of agriculture in the county. Recent developments call for a far more optimistic outlook. Due to rapid population growth and urban encroachment in certain specialized crop areas of California, a demand is being created for new producing areas. **El Dorado County's location, topography and climate provide ideal sites for some of these high income crops.**

El Dorado County has a range in elevation from 400 to 10,000 feet. This obviously gives a considerable variety of climate. Below 1,000 feet the climate is very similar to the great valley floor. Above 4,000 feet, except for Christmas tree production, there is little agricultural potential.

CLIMATE

Climate is the prime factor in determining whether a crop will be a success in a given area. For example, an early or late harvest date often brings a much better marketing price. Climate determines quality. It also influences a plant's ability to survive insect and disease attacks and produce full and regular crops. Many different climates are available in El Dorado County because of the wide variability in topography and elevation. **Some of these climates are relatively unique and are being recognized as distinctly desirable for specific crops.**

LAND

Deep, well-drained soils are found in various locations within the county. Generally, these soil locations are on ridges or hillsides having excellent air drainage. Such relatively frost-free sites are ideal for the requirements of our tree fruit crops. Many such sites remain undeveloped.

WATER

Present and future supplies of water are ample. Nearly all sources of irrigation water are from high mountain streams and lakes, which insures extremely high quality. The recent development of a seven-million dollar distribution system generally provides water in pipelines with adequate pressure for sprinkler irrigation. Such was not always the case. Until the development of Siy Park Reservoir in 1955 and Stumpy Meadows Reservoir in 1962, water supply was a severe limiting factor to the expansion of agriculture in the county.

RECOMMENDED CROPS

Many crops may be grown in the many climates available in the county. For greatest economic success we suggest growing those crops which may be produced with a decided competitive advantage over other producing districts.

Tree crops are most heavily influenced by the climatic factors that provide competitive advantages. At the present time, market advantages can be demon-

strated for the following crops: pears, apples, late-season plums, cherries, dry-land walnuts, Christmas trees, varietal grapes and ranch marketed specialty crops. These crops and the reasons for their potentials are discussed in subsequent paragraphs.

PEARS

El Dorado County has a nationwide reputation for consistently producing Bartlett pears of unsurpassed quality. This pear industry is the oldest and most stable on the West Coast. The "Placerville Bartlett," as it is known in the trade, is the best keeping fresh Bartlett produced. Since its inception in 1850, the El Dorado County pear industry has withstood inadequate water supply, pear blight, black end, economic chaos and is presently emerging from its most serious challenge — Pear Decline.

Two thousand, four hundred acres of the county's 4,000-acre pear industry have survived the ravages of Pear Decline. Production, which fell dramatically in the early 1960's has shown a sharp turn upward, as a result of a concerted program to combat the problem. **New decline resistant rootstocks have been established that are highly adapted to the district. They will have a dynamic influence on pear yield.** Test plantings have demonstrated that new orchards can be brought into paying production in five seasons — years ahead of orchards on standard rootstock.

Nearly all the pears grown in El Dorado County are located in the elevation zone from 1,500 to 3,500 feet. This places the district in the late-season California shipping market.

Very little late-district pear land of proven capability remains to be developed in California. El Dorado County still offers a number of choice sites at reasonable prices. A few of these sites are frost-free, offering a particularly fine competitive position for a pear orchard.

The results of a six-year-old rootstock trial for Bartlett pears dwarf Dick Bethell, El Dorado county's 6'3" farm advisor. Two outstanding decline-tolerant rootstocks promise to return El Dorado County to a position of prominence in the nation's pear industry.

APPLES

The elevation zone from 2,500 to 4,000 feet provides a natural climate for the production of fine quality fall, dessert apples. The Golden Delicious variety probably reaches its zenith in edibility in this district. The El Dorado Golden is an especially firm and juicy apple with a balance of fruit acids and sugars that creates the ultimate in flavor. Excellent flavor and texture characteristics are also achieved in Red Delicious and Red Rome Beauty. The skin finish of our Golden is not as attractive as that produced in desert climates, however retailers find that they can get top prices for them. The red varieties have not always achieved full color development. New high colored sports of these varieties are going to eliminate color as a marketing problem.

One of the major competitive advantages of the district has actually proven to be a disadvantage. Closeness to the marketplace is normally viewed as favorable, but it has led growers to sell their own fruit in direct competition with their neighbors. Wholesale buyers have taken unmerciful advantages of these uncoordinated marketing efforts.

In an effort to circumvent the unfavorable, wholesale market environment, apple growers have embarked on a ranch marketing program. "Apple Hill" was the name selected by growers to identify this exceptional apple growing area. In the past four years considerable success has been realized with this selling method. Apple Hill has stimulated the enthusiasm of growers, visitors and the general community.

PLUMS

Historically, late season plums have performed well at elevations from 1,000 to 2,500 feet. As former orchards succumbed to old age, growers replaced them with pears to simplify their farming operation. New plantings have been made recently. The first of these have started to produce and have brought excellent returns. Competitive advantages are outstanding quality and color, combined with a market timing which has experienced consistent strong demand.

CHERRIES

The profit potential for cherries makes this fruit the most exciting crop prospect for El Dorado County. Cherries grown at elevations from 1,500 to 2,500 feet will ripen with the Santa Clara cherry district and harvest should be completed before the heavy volume of Oregon and Washington cherries flood the market. Agricultural authorities in Santa Clara County state that industrial development will completely consume this famous cherry district. The Sierra Foothills offer the most logical location remaining for the redevelopment of this lucrative mid-season cherry industry.

El Dorado County has a very old and small cherry district located at Cool. Most of these orchards are located at an elevation of around 1,500 feet and were dry land farmed for many years. Fruit quality on these old trees is outstanding, but their bearing capacity has been diminished by drought and age. New, high density plantings of virus free stock offer a possibility of unparalleled profit making. Orchard site selection will be critical to success. Frost-free locations on virgin soils with excellent drainage characteristics are required, and available.

Small plantings, five to ten acres in size, should make sound enterprises. Harvest labor should be readily available. Crews harvesting the 10,000-acre San Joaquin cherry crop would welcome a harvest stop in El Dorado County before moving to the Oregon harvest.

DRYLAND WALNUTS

There are 346 acres of walnuts listed in the Agricultural Commissioner's crop report. Most of these are dry-farmed in the deep soils found in the southern part of the county. Production is moderate and cultural costs are extremely low, making an attractive profit possible on this arid land. The chief problem has been the length of time required to establish a producing orchard—12 to 15 years. New early producing varieties and vigorous rootstocks may reduce this time to seven years.

CHRISTMAS TREES

"Choose and Cut" Christmas tree farms are experiencing a rapid growth in popularity. Residents of metropolitan areas are traveling great distances for the pleasures of a mountain outing where they can select their very own Christmas trees. Both managed natural forest stands and plantations have proven successful.

"Farming" of Christmas trees holds great promise for the wholesale market. At elevations below 4,000 feet, farmed trees could be harvested "fresh" on short notice for delivery to retail sellers as needed. Closeness to our markets gives us a superior position in El Dorado County for the merchandising of our Christmas trees. Numerous Christmas tree species are being grown in this natural environment. Plantation owners have found that our native species adapt extremely well to intensive farming practices. Outstanding quality and rapid growth are the rewards of farming. Douglas fir, knobcone pine and Sierra redwood can be harvested in four years. Beautiful six-foot white fir can be produced in six to seven seasons.

Production of 2,000 to 3,000 trees can be realized per acre. Current wholesale prices for good quality white fir is in excess of 50¢ a linear foot.

This picture exemplifies the obvious natural environment that is making Christmas tree farming the fastest growing industry in El Dorado County and El Dorado County the fastest growing Christmas tree industry in the State of California. Mel and Verda Irving developed their lucrative "choose and cut" farm on weekends prior to their retirement from city living.

That varietal wine grapes will grow well in El Dorado County has been ably demonstrated by George and Marian Ritchie. These grape-laden vines, planted as rooted cuttings, are only in their second leaf in the vineyard.

WINE GRAPES

Production of premium quality wine grapes holds real promise for the future as demand continues to exceed production in the historic growing areas. Available grape land in these districts is rapidly vanishing. New growing areas are being sought. El Dorado County offers a variety of grape-growing regions, making it possible to grow all the premium varieties. Test plantings have been established to pinpoint the logical choice of varieties for our various growing districts. Confidence in the outcome has already prompted two wineries to establish in the county. This new industry will be developed without the built-in failures of older districts; such as virus diseases, nematodes and poor varieties.

"Apple Hill," a farming community in El Dorado County that has blended roadside marketing, beautiful scenery and recreation into a pleasing experience for any visitor—and a growing profit for the farmer.

RANCH MARKETING

The recent revival of ranch marketing is creating an opportunity for the production of many special crops in El Dorado County. The "trapped" city dweller thrives on a leisurely trek to the country for the enjoyment of sunshine, open space and the opportunity to purchase high quality, ranch-fresh produce. The "Apple Hill" ranch marketing program and the "Choose and Cut" Christmas tree trade have already proven that the potential for this type of marketing is almost unlimited. Any mountain grown agricultural product excels in quality. In urbanized California, many persons have never been exposed to the rare treats that are available from tantalizing tree-ripened fruits, berries and vegetables. When this method of merchandising is pursued, it substantially increases the return to the farmer.

ANIMAL INDUSTRY

Currently, livestock and poultry account for three-million dollars of the agricultural income in El Dorado County. Increases in land value have placed a squeeze on the livestock industry. However, the tenacity of this industry has been proven as animal numbers have remained virtually unchanged for the past ten years.

In recent years the poultry industry has gone through a revolutionary period, involving trends towards bigness and automation. Several El Dorado County producers have emerged from this period as successful large operators. Freedom from disease is the key advantage.

CONCLUSION

There is excellent opportunity for expansion of successful agriculture in El Dorado County. The factors that have led to this favorable economic outlook are expected to become accentuated in the future. Agricultural leaders and capital are needed now to bring these opportunities into reality.

Persons desiring further information on any of the above-mentioned crops can contact the following organizations or individuals:

Gentlemen:

In accordance with Provisions of Section 2279, of the California Agricultural Code, I herewith submit the 1969 El Dorado County Crop Report.

El Dorado County Agriculture, in 1969, again experienced a profitable year. The increases in gross value were experienced in livestock and poultry and in miscellaneous crops such as: nursery stock, Christmas trees, etc. Pear growers were plagued with small fruit and consequently received a smaller gross return than in 1968. Apple growers faced a very weak wholesale market and were forced to sell at lower value. The only bright spot in the county's apple industry is Apple Hill - which in 1969 was the difference between profit and loss for our growers.

Pear growers are again faced with the threat of renewed pear decline. The pear industry, in cooperation with the Farm Adviser's Office and the Office of the Agricultural Commissioner, have planned and are implementing a coordinated spray program - that, if successful, will counter this threat.

Please note that production returns stated in this report are F.O.B. the plant and do not reflect net returns or the profit realized by the grower.

This report was compiled by Merco Petach, Agricultural Inspector, with our Department. Mr. Petach has spent many tedious hours reviewing data so that this report would be accurate and meaningful.

I wish to express my appreciation to the many individuals and organizations that so willingly cooperated in the contribution of information necessary to make this report possible.

Respectfully submitted,

Edio P. Delfino

Agricultural Commissioner

Gentlemen:

In accordance with Provisions of Section 2279, of the California Agricultural Code, I herewith submit the 1970 El Dorado County Crop Report.

Extreme cold weather in April 1970 caused severe damage to the El Dorado County apple and pear industry. The Camino and Larsen Valley fruit district received almost complete loss of their pear crop - and over 50% loss in their apple crop. The remainder of the county's fruit industry varied from 50% to 100% production. Consequently, some growers faced a complete crop loss while other growers had a profitable year.

The roadside marketing programs are continuing to grow in popularity and benefit to the county's economic welfare. As growers continue to succeed in this type of marketing - greater emphasis will be placed on this phase of our industry.

The threat of pear decline continues to plague our pear industry. Pear growers, in cooperation with the Farm Advisor's Office and the Office of Agricultural Commissioner, implemented a coordinated spray program during 1970. This program proved to be successful - and we will continue to perfect our technique on the control of this serious disease.

Please note that production returns stated in this report are F.O.B. the plant and do not reflect net returns or the profit realized by the grower.

This report was compiled by Merco Petach, Agricultural Inspector, with our Department. Mr. Petach has spent many tedious hours reviewing data so that this report would be accurate and meaningful.

I wish to express my appreciation to the many individuals and organizations that so willingly cooperated in the contribution of information necessary to make this report possible.

EL DORADO COUNTY CROP REPORT

EL DORADO COUNTY DEPARTMENT OF AGRICULTURE

1971

The Michigan California Lumber Company is farming 75,000 acres of forest for maximum quality lumber production.

EL DORADO COUNTY DEPARTMENT OF AGRICULTURE
2892 Mosquito Road
Placerville, California

Mr. Jerry Fielder, Director
State Department of Agriculture
Sacramento, California

El Dorado County Board of Supervisors

William Johnson, Chairman

Third District
Fourth District
Fifth District

Gentlemen:

In accordance with Provisions of Section 2279, of the California Agricultural Code, I herewith submit the 1971 El Dorado County Crop Report.

Extreme cold weather in April 1971 caused severe damage to the El Dorado County apple and pear industry. The Camino and Larsen Valley fruit district received almost complete loss of their pear crop - and over 75% loss in their apple crop. The remainder of the county's fruit industry varied from 50% to 100% production. Consequently, some growers faced a complete crop loss while other growers had a profitable year.

Intergraded pest control became a reality during 1971. Pear and apple growers, in cooperation with the Farm Advisor's Office and the El Dorado County Department of Agriculture, were able to implement a pest control program that utilized biological control as well as chemical control. This program achieved its goal of pest control at less cost to the growers and harm to the environment.

Roadside marketing of agricultural products continues to expand. It is noted that more and more people are becoming aware of our beautiful area and high quality products. This form of merchandising will continue to expand both in variety of products sold and in volume.

Please note that production returns stated in this report are F.O.B. the plant and do not reflect net returns or the profit realized by the grower.

This report was compiled by Merco Petach, Agricultural Inspector, with our Department. Mr. Petach has spent many tedious hours reviewing data so that this report would be accurate and meaningful.

I wish to express my appreciation to the many individuals and organizations that so willingly cooperated in the contribution of information necessary to make this report possible.

Respectfully submitted,

Edio P. Delfino

Gentlemen:

In accordance with Provisions of Section 2279, of the California Agricultural Code, I herewith submit the 1972 El Dorado County Crop Report.

Extreme cold weather in April 1972 again caused severe damage to the El Dorado County apple and pear industry. The apple crop was not as severely damaged as it was in 1971; however, the damage was substantial. The Camino and Larsen Valley fruit district received a complete loss of their pear crop and over 60% loss in their apple crop. The one factor that has played a vital part in holding this district together has been the Apple Hill roadside marketing program.

Farmer success with the integrated pest control program instituted in 1971 continues to improve. Most growers are now involved with this type of agricultural pest control. Integrated pest control is a program that utilizes biological control in conjunction with chemical control. This program, if managed correctly, controls crop damaging pests with less cost to the growers while being less disruptive to the environment.

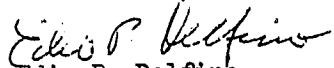

Growers are continuing to develop and expand speciality crops that are suited for the El Dorado area. Late season plums, cherries, and dry wine varietal grapes are the predominant leaders in this expansion.

Please note that production returns stated in this report are F.O.B. the plant and do not reflect net returns or the profit realized by the grower.

This report was compiled by Merco Petach, Agricultural Inspector, with our Department. Mr. Petach has spent many tedious hours reviewing data so that this report would be accurate and meaningful..

I wish to express my appreciation to the many individuals and organizations that so willingly cooperated in the contribution of information necessary to make this report possible.

Respectfully submitted,

Edio P. Delfino
Agricultural Commissioner

Gentlemen:

In accordance with Provisions of Section 2279, of the California Agricultural Code, I herewith submit the 1973 El Dorado County Crop Report.

Mild temperatures in March and April of 1973, coupled with moderate to good prices, have given El Dorado County the largest gross agricultural income in its history. The pear industry reflected the greatest gain from its production of 1972. The primary reason that this production is so dramatic is that 1972 had very poor production due to severe frosts. Roadside marketing continues to increase in popularity and is increasing in its importance in El Dorado County.

The integrated pest control procedure has now almost been adopted by 100% of the growers. This program, if managed correctly, controls crop damaging pests with less cost to the grower while being less disruptive to the environment.

The Land Conservation Act of 1965 has made it possible for farmers to remain in production and to be able to produce the food and fibre needed by this nation.

The grape industry has begun to grow on the western slope of El Dorado County. During 1973 new acreages of grapes have been planted and one winery constructed. It is anticipated that the grape industry, in conjunction with local wineries, will have an added benefit of increased tourism for the area.

Please note that production returns stated in this report are F.O.B. the plant and do not reflect net returns or the profit realized by the grower.

This report was compiled by Merco Petach, Agricultural Inspector, with our Department. Mr. Petach has spent many tedious hours reviewing data so that this report would be accurate and meaningful.

I wish to express my appreciation to the many individuals and organizations that so willingly cooperated in the contribution of information necessary to make this report possible.

Respectfully submitted,

Edio P. Delfino
Agricultural Commissioner

Gentlemen:

In accordance with Provisions of Section 2279, of the California Agricultural Code, I herewith submit the 1974 El Dorado County Crop Report.

Lower animal prices and cold weather during the spring of 1974 reduced the gross value of this County's agricultural industry by approximately \$2,000,000.00. Over half of this loss was experienced by cattlemen - primarily due to low cattle prices.

Grower success with the integrated pest control program continues to improve. This program, if managed correctly, controls crop damaging pests with less cost to the grower.

Ranch marketing of agricultural products continues to expand within the county. This method of marketing has been the salvation of many small orchards. Ranch marketing also benefits many local businesses that cater to tourism.

The varietal wine grape industry continues to expand. A winery has been constructed in the Apple Hill area and is selling exceptionally fine wine produced from grapes grown in the county.

Please note that production returns stated in this report are F.O.B. the plant and do not reflect net returns or the profit realized by the grower.

This report was compiled by Merco Petach, Agricultural Inspector, with our Department. Mr. Petach has spent many tedious hours reviewing data so that this report would be accurate and meaningful.

I wish to express my appreciation to the many individuals and organizations that so willingly cooperated in the contribution of information necessary to make this report possible.

Respectfully submitted,

Edio P. Delfino
Agricultural Commissioner

Gentlemen:

In accordance with the provisions of Section 2279 of the California Agricultural Code, I herewith submit the 1975 El Dorado County Crop Report. The gross agricultural values have remained approximately the same as calendar year 1974. Total production of all crops was higher; however, lower prices received by growers offset the production gain.

Integrated pest control continues to expand in popularity with County growers. This program, if managed correctly, controls crop-damaging pests with less cost to the grower and less effect on the environment.

Ranch marketing of the County's agriculturally-produced products continues to expand and grow in popularity. This method of marketing has been very beneficial to our agricultural industry, plus the added benefit to the community from its recreational aspects.

The interest of the community on the welfare of the agricultural and timber industries have had a positive effect on the attitudes of agriculturists. I wish to commend the Board of Supervisors for their interest and support on behalf of these industries.

Please note that production rates stated in this report are FOB the plant and do not reflect net returns or profit realized by the grower.

This report was compiled by Merco Petach, Agricultural Biologist, with this department. Mr. Petach spent many tedious hours collecting and reviewing data so this report would be accurate and meaningful.

I wish to express my appreciation to the many individuals and organizations that contributed the information necessary to make this report possible.

Respectfully submitted,

Edio P. Delfino
Agricultural Commissioner

Arlene Todd

Dear Director and Supervisors:

In accordance with provisions of Section 2279 of the California Agricultural Code, I hereby submit the 1976 El Dorado County Crop Report.

The gross agricultural value has dropped approximately ~~\$500,000~~^{\$1,500,000}; however, the pear and cattle industries have suffered severe losses due to poor prices and high costs -- high feed costs for livestock and poor prices and demands on Bartlett pears.

The County's ranch marketing program is continuing to spread with more growers becoming involved with the program. It is becoming more and more obvious that this method of selling agricultural crops out of necessity must be expanded and improved.

The integrated pest control program has proven beneficial to the growers by reducing control costs without sacrificing the quality of products produced. This program has proven that if managed correctly, it controls crop-damaging pests with less cost to the grower and less effect on the environment.

The continued interest of the community regarding the welfare of the agricultural and timber industries has had a positive effect on the attitude of the agriculturalists. The interest and support exhibited by the Board of Supervisors has been very beneficial to this vital industry.

The monetary values recorded in this report are F.O.B. the plant and do not reflect net returns or profits realized by the grower.

This report was compiled by Merco Petach, Agricultural Biologist III, with the El Dorado County Department of Agriculture. Mr. Petach spent many hours collecting and reviewing data so the report would be accurate and meaningful. I wish to express my appreciation to Mr. Petach and the many individuals and organizations that contributed information to make this report possible.

Sincerely,

*Edio P. Delfino
Agricultural Commissioner*

El Dorado County Department of Agriculture

1977 Agricultural CROP REPORT

UNIVERSITY OF CALIFORNIA
DAVIS
JUN 13 1978
GOV'T. DOCS. - LIBRARY

Department of Agriculture

PLACERVILLE, CALIFORNIA 95667

April 18, 1978

Mr. Richard E. Rominger, Director
California Department of Food and Agriculture

and

The El Dorado County Board of Supervisors

Thomas L. Stewart, Chairman
Arliene Todd
William V. D. Johnson
W. P. "Dub" Walker
Lloyd Kutter

Dear Madam and Gentlemen:

In accordance with provisions of Section 2279 of the California Agricultural Code, I hereby submit the 1977 El Dorado County Crop Report.

The gross agricultural value has increased \$1,809,800; however, part of this increase is primarily due to the cattle ranchers being forced to liquidate part of their herds because of the severe drought that was experienced during the summers of 1976 and 1977.

Included with this report for the first time is the value of timber stumpage harvest from private and public lands in the County. The primary reason for the inclusion of timber products in this report is to present a more complete picture of the value of El Dorado County's production to the economy of this area.

The County's ranch-marketing program continues to expand with more county growers becoming involved with direct farm sales. The proximity of these farm sale areas in relation to the large population centers promises a bright future for the continual growth and health of this method of merchandising.

The pear industry experienced greater production than in 1976; however, the return for pears to the growers is low primarily due to costs of increased operation and static returns for the product. The increased interest by wineries in the use of pear juice has tended to strengthen and stabilize the market. If this interest continues, the pear industry will definitely benefit.

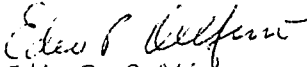

The interest and support exhibited by the Board of Supervisors in the agricultural and timber industries has had a positive effect on the attitude of most agriculturalists.

The monetary values recorded in this report are FOB the plant and do not reflect net returns or proceeds realized by the grower.

This report was compiled by Carl Locher, Jr., Deputy Agricultural Commissioner with the El Dorado County Department of Agriculture. Mr. Locher spent many hours collecting and reviewing data so this report would be accurate and meaningful.

I wish to express my appreciation to the many individuals and organizations that contributed information to make this report possible.

Sincerely,

Edio P. Delfino
Agricultural Commissioner
