California Department of Food and Agriculture

Agricultural Commissioners' Crop Reports

Los Angeles County

1951-1963

California County Agricultural Commissioners' Reports from the California Department of Food and Agriculture. This collection consists of annual crop and livestock data from each of the 58 California Counties. The collection covers 1915-1981; digitization of the rest of the collection is forthcoming.

This digitization project was funded by the Giannini Foundation of Agricultural Economics,
<http://giannini.ucop.edu/>.

The work was completed by the staff of the Giannini Foundation Library, University of California, Berkeley, <http://are.berkeley.edu/library/>. **Please contact the Library to consult the originals.**

1951

CROP REPORT SUMMARY FOR 1951

Plant crops and apiary products brought \$107,570,000 to Los Angeles County farmers in 1951, the seventh successive year of severe drought. This value is the third largest ever received and was exceeded only in 1945 (\$111,976,100) and 1946 (\$112,286,500).

Livestock production value is not included.

Returns for plant crops were 13% greater than in 1950 although harvested acreage totals and production per acre were lower for most crops, the notable exceptions being almonds, avocados, peaches, celery, and carrots.

Citrus with 44,230 bearing acres returned \$32,031,000 compared to \$31,638,300 for the crop of 46,730 acres the year before.

Acreage of other orchard crops, grapes and berries, showed little change but receipts increased by \$853,800 to \$4,110,800.

The harvested acreage of field crops, including alfalfa and the dry farm bean and grain crops, decreased 50,590 acres because of drought to a total of 104,120 acres but these farmers received \$16,391,700, almost 4-1/2 million more than in 1950.

Vegetable growers harvested within 2,000 acres of the 1950 total but got \$23,109,000 for these crops, or about \$4,400,000 more money.

Production of Chinese vegetables (food vegetables for Chinese dishes) is a rapidly growing industry and the value is estimated separately for the first time. This amounted to \$320,000 for the crops grown on 200 acres with bean sprouts grown in water accounting for \$200,000 of the total.

Nursery stock and cut flowers were up \$2 million to a total of \$31,500,000.

"10 Million Dollar" Crops

Nursery stock	\$18,500,000
Cut flowers	13,000,000
Alfalfa hay	11,150,000
Valencia oranges	11,137,000
Navel "	10,317,000
Lemons	10,141,000

"Million Dollar" Crops

Celery	\$5,750,000
Cabbage	1,850,000
Green onions	1,485,000
Cauliflower	1,386,000
Avocados	1,105,000
Carrots	1,050,000

Valuation figures are based on delivery price at the market or f.o.b. price on commodities shipped out of state. In arriving at totals, price, acreage, and yield, averages have been checked with the state crop statistician's office and prices were compared with Federal-State Market News Service quotations. Marketing program committees, the Farm Advisor's office, farmers, growers' associations, land companies, and produce dealers were interviewed before final determination of figures used. Assistance received from the many persons and agencies who furnished crop information is greatly appreciated.

CROP REPORT
LOS ANGELES COUNTY

LIBRARY
UNIVERSITY OF CALIFORNIA
DAVIS

OFFICE OF
AGRICULTURAL
COMMISSIONER

CROP REPORT SUMMARY FOR 1952

Los Angeles County farmers received \$106,394,000 for their 1952 harvest of plant crops and honey from 245,000 crop acres. This does not include livestock production value.

This was the fourth largest return ever received and is \$1,176,000 less than in 1951 with 200,000 crop acres. The year of highest return was 1946 with crops which sold for \$112,286,500.

Abundant rainfall and good growing weather increased the production of almost all important deciduous and field crops.

Growers of field crops, such as hay, grain, beans, etc., harvested crops that brought \$18,804,800 from 154,830 acres, compared with \$16,000,000 from 104,120 acres the year before when approximately 40,000 acres of wheat was a total failure due to drought.

The vegetable crop value of \$22,146,600 was almost a million dollars less than in 1951. Poor prices and reduced acreage lowered the returns of most important vegetable crops except celery, which brought \$7,260,000, an increase of \$1,500,000 over 1951 for less acreage and production.

Total citrus returns of \$28,678,000 were \$3,353,000 under 1951, due chiefly to an unusually poor crop of navels with small sizes and defects, such as water rot. Navel returns alone were \$2,751,000 less than the year before although navel orchards decreased only 270 acres. Valencias lost 1,470 acres which accounts for virtually all the decrease of \$580,000 in value of this crop.

Acreage of other orchard crops and grapes and berries totaled 16,600, only 305 less than in 1951, but high production of most of these crops resulted in a total value of \$5,060,000, a gain of \$950,000.

Million Dollar Crops

Nursery stock	\$18,500,000	Navels	\$7,566,000	Green onions	\$1,200,000
Cut flowers	12,500,000	Celery	7,260,000	Dry onions	1,120,000
Alfalfa	11,800,000	Strawberries	1,800,000	Tomatoes	1,118,000
Valencias	10,557,000	Irrig. Pastures	1,425,000	Avocados	1,100,800
Lemons	10,200,000	Cabbage	1,269,000	Cauliflower	1,025,000

Valuation figures are based on delivery price at the market or f.o.b. price on commodities shipped out of state. In arriving at totals, price, acreage, and yield, averages have been checked with the state crop statistician's office and prices were compared with Federal-State Market News Service quotations. District agricultural inspectors, marketing program committees, the Farm Advisor's office, farmers, growers' associations, land companies, and produce dealers were interviewed before final determination of figures used. Assistance received from the many persons and agencies who furnished crop information is greatly appreciated.

LOS ANGELES COUNTY CROP REPORT FOR 1953
(Exclusive of Livestock Production)

Los Angeles County farmers received \$93,050,800 from plant crops and honey from 231,000 crop acres in 1953. This total represents a drop of \$13,343,200 from 1952 when 245,000 crop acres were farmed.

The reduction was due to a combination of lower prices received by farmers for most crops throughout the year; acreage loss to subdivisions; and the near failure of deciduous fruits and loss to several dry farmed field crops as a result of adverse weather. Spring rains were inadequate and late frosts hit hard.

There were bright spots, however. Lemons from 9,460 acres, due to good production and high prices, yielded a record breaking return of \$11,300,000. Because of above normal yields in the Antelope Valley, 42,500 acres of wheat brought \$1,148,000, the highest return ever known for this crop. Celery growers who enjoyed good prices at the peak production period in the spring, received \$8,120,000 or almost a million dollars more than in 1952. Strawberry production from 550 acres was worth \$1,856,200, a new high. Field corn grown in the Antelope Valley where the poultry industry offers a ready market zoomed to 1,450 acres from only 410 acres the year before.

Citrus returns came to \$26,574,000, as compared to a 1952 total for this crop of \$28,678,000. A preponderance of small sizes plus loss of 2,400 acres of Valencias to subdivision, caused a drop from \$10,557,000 in 1952 to \$8,580,000 this past year.

Peaches, Bartlett pears, and walnuts, were crops that produced lightly because of spring frosts. Certain dry farmed crops, such as garbanzo beans and grain hay, suffered due to insufficient moisture in the spring. Honey production was low because of drought conditions in the spring that prevented flowers from developing.

Alfalfa hay because of both a reduction in acreage and a dip in price, returned \$7,583,000 compared with \$11,800,000 in 1952. However, income from alfalfa seed and stubble used for sheep feed showed an increase of \$115,000.

Value of vegetables totaled \$20,179,100, which was nearly \$2,000,000 below 1952. Crop acres were down 3,435 but lower prices for most vegetables also contributed to the reduction. Spinach, romaine, mustard greens, and endive, which are particularly subject to smog damage, totaled only 1,950 crop acres as compared to 4,700 in 1948.

Million Dollar Crops

Nursery stock	\$18,500,000	Navels	\$6,327,000
Lemons	11,300,000	Strawberries	1,856,200
Cut Flowers	10,000,000	Irrigated pastures	1,430,000
Valencias	8,580,000	Wheat	1,148,000
Celery	8,120,000	Avocados	1,073,200
Alfalfa hay	7,583,000	Green onions	1,025,000

Valuation figures are based on delivery price at the market or f.o.b. price on commodities shipped out of state. In arriving at totals, price, acreage, and yield, averages have been checked with the state crop statistician's office, and prices were compared with Federal-State Market News Service quotations. District agricultural inspectors, marketing program committees, the Farm Advisor's office, farmers, growers' associations, land companies, and produce dealers were interviewed before final determination of figures was made. Assistance received from the many persons and agencies who furnished crop information is greatly appreciated.

CROP REPORT
LOS ANGELES COUNTY

OFFICE OF
AGRICULTURAL
COMMISSIONER

LIBRARY
UNIVERSITY OF CALIFORNIA
DAVIS

LOS ANGELES COUNTY CROP REPORT FOR 1954
(Exclusive of Livestock Production)

Los Angeles County farmers received \$85,040,200 for plant crops and honey from 224,000 crop acres in 1954. This is a drop of \$8,010,600 from 1953 when 231,000 crop acres were harvested.

Loss of farm land to subdivisions, poor prices for several major crops and low yields for others were principal causes for reduction in value. Citrus diverted to subdivisions totaled 4,070 acres, more than half of which was Valencia oranges.

Citrus returns came to \$19,679,000 compared with \$26,574,000 in 1953. One of the lightest crops of Valencias in many years brought \$5,520,000, almost \$3,000,000 less than the previous year. Lemons netted \$9,200,000 compared with \$11,300,000 in 1953; the crop was big but by-products per ton prices were about half as much as the year before. Avocado yields were poor and value dropped to \$687,500 from \$1,073,200 in 1953.

Deciduous fruit and nut crops brought more money than any time since 1946. Bartlett pears worth \$50,400 in 1953--when the crop was a near failure because of spring frosts--jumped to \$476,000 this year. Peaches, apples, and almonds also showed gains.

Unfavorable weather cut down production of alfalfa and grains. Alfalfa hay was worth \$5,451,000, approximately \$2,000,000 below 1953. Antelope Valley field corn was grown on 5,500 acres with record breaking yields; because of the increase of poultry and livestock industries in the Valley more of this crop will be planted on land formerly in other farm products.

Nursery stock value advanced to \$22,000,000 from \$18,500,000, the year before, stimulated by demand from owners of new homes. There are nearly 2,600 nursery locations in the county.

Million Dollar Crops

Nursery Stock	\$22,000,000	Navel Oranges	\$ 4,710,000
Lemons	\$ 9,200,000	Irrigated Pastures	\$ 1,600,000
Cut Flowers	\$ 8,500,000	Strawberries	\$ 1,435,000
Valencias	\$ 5,520,000	Dry Beans	\$ 1,334,000
Alfalfa Hay	\$ 5,451,000	Carrots	\$ 1,215,000
Celery	\$ 4,920,000	Green Onions	\$ 1,080,000

Valuation figures are based on delivery price at the market or f.o.b. price on commodities shipped out of state. In arriving at totals, price, acreage, and yield, averages have been checked with the state statistician's office, and prices were compared with Federal-State Market quotations. District agricultural inspectors, marketing program committees, the Farm Advisor's office, farmers, growers' associations, land companies, and produce dealers, were consulted before final figures were determined. Assistance received from the many persons and agencies interviewed is greatly appreciated.

CROP REPORT LOS ANGELES COUNTY

OFFICE OF
AGRICULTURAL
COMMISSIONER

LOS ANGELES COUNTY CROP REPORT FOR 1955
(Exclusive of Livestock Production)

Los Angeles County farmers received \$85,519,800 for plant crops and honey from 205,000 crop acres in 1955. This constituted a gain of \$479,600 from 1954 when 224,000 crop acres were harvested.

Despite loss of farm land to residential subdivisions and industry, increased value or production of several crops offset the decreases in others.

Citrus with 4,040 less acres returned \$17,308,000 compared with \$19,679,000 a year ago. Valencia small sizes were detrimental from the marketing standpoint and value dropped to \$5,130,000 about \$400,000 from 1954. Biggest difference in the citrus group the past two years was lemons. The 1955 value of \$7,800,000 was nearly \$1,400,000 below the previous year's figure, the main cause of which was lower production and lower prices paid to growers for by-products fruit.

Avocado acreage, (2,610) held its own. In spite of lower prices than in 1954, production doubled to bring the valuation to \$927,000, nearly \$250,000 more than the year before.

For the first time in this county vegetables brought higher returns than citrus. Vegetables were valued at \$18,915,600 which was almost \$1,000,000 ahead of 1954. Celery, the county's most important vegetable crop was worth \$5,440,000. Year round succession of plantings of row crops such as green onions, spinach, and radishes make them important items in the truck crop field. One notable drop in acreage due to subdivisions was cauliflower, lessened to 950 acres from 1,200 the year before. Strawberries, although the acreage has remained about the same for the past two years, (550 acres in 1955) were worth over a million dollars more than in 1954, valued at \$2,585,000, due to higher yields and better prices.

Spring frosts seriously affected the apple crop, and to some extent, both peaches and pears in the Antelope Valley. Almonds escaped damage and the crop was the heaviest and most valuable on record, bringing \$280,400.

Field crop prices had a value of \$12,198,200, slightly less than the 1954 figure. Alfalfa accounted for more than half of this amount.

Nursery stock value advanced to \$24,000,000 from \$22,000,000, the year before, stimulated by demand from owners of new homes. There are nearly 2,600 nursery locations in the county.

Million Dollar Crops

Nursery Stock	\$24,000,000	Navel Oranges	\$4,080,000
Lemons	7,800,000	Strawberries	2,585,000
Cut Flowers	7,500,000	Carrots	1,440,000
Alfalfa Hay	6,442,000	Irrigated Pastures	1,200,000
Celery	5,440,000	Cabbage	1,170,000
Valencias	5,130,000	Green Onions	1,128,000

Valuation figures are based on delivery price at the market or FOB price on commodities shipped out of state. Price, acreage, and yield averages have been checked with state statistician's office, and prices were compared with Federal-State Market quotations. District agricultural inspectors, marketing program committees, the Farm Advisor's office, farmers, growers' associations, land companies, and produce dealers, were consulted before final figures were determined. Assistance received from the many persons and agencies interviewed is greatly appreciated.

LOS ANGELES COUNTY CROP REPORT FOR 1956
(Exclusive of Livestock Production)

Plant crops brought Los Angeles County farmers \$86,755,500 in 1956 from 198,600 harvested acres, \$1,235,700 more than the return from 205,000 crop acres in 1955.

Favorable weather for most crops and better control of destructive pests were chiefly responsible for the good harvest. Losses from spotted alfalfa aphid, citrus red scale, corn earworm, and pear blight were reduced. More effective chemical control of weeds increased grain and hay yields. Loss of farm land to subdivision continued at about the same rate as before.

Citrus with 4,270 fewer acres than last year returned \$16,918,000 compared with \$17,308,000 in 1955. Valencia sizes were larger, the crop was bigger, and the price was better bringing an increase in value to \$6,600,000, about \$1,500,000 above 1955. Lemons dropped from \$7,800,000 to \$6,550,000 mostly due to a decrease in production caused by a severe hot spell in September 1955.

Despite higher prices avocado crop returns dropped to \$438,900 compared to \$927,500 the previous year because of a very light set of fruit on Fuerte trees.

Vegetable production from 20,910 crop acres had a total value of \$20,039,800, an increase of \$1,124,200 over 1955. 14 vegetables returned over \$500,000 each including celery worth \$5,544,000. Increased production of strawberries despite lower prices, brought \$2,970,000 compared to \$2,585,000 in 1955.

In the Antelope Valley favorable spring weather resulted in a good set of fruit on peach and pear trees. Prices were lower but increased production brought higher returns for both crops. Alfalfa hay production increased by 23,500 tons due to effective control of spotted alfalfa aphid.

Field crops returned \$11,887,000 slightly less than 1955 chiefly due to lower alfalfa hay prices. Wheat and barley totaled \$1,752,300 an increase of \$229,700.

Nursery stock, in continuous demand from new home builders, advanced in value to \$24,500,000, an increase of \$500,000 over the year before. Retail and wholesale nursery locations in the county total nearly 2,700.

The 1954 Federal Census of Agriculture report recently released lists Los Angeles County as third in the nation in value of farm products including livestock production.

MILLION DOLLAR CROPS

Nursery stock	\$24,500,000	Alfalfa hay	\$5,752,000	Carrots	\$1,350,000
Cut flowers	8,000,000	Celery	5,544,000	Sweet corn	1,125,000
Valencia oranges	6,600,000	Navel oranges	3,500,000	Irrig.pastures	1,100,000
Lemons	6,550,000	Strawberries	2,970,000	Green onions	1,089,000

Valuation figures are based on delivery price at the market or FOB price on commodities shipped out of state. Price, acreage, and yield averages have been checked with state statisticians office, and prices were compared with Federal-State Market quotations. District agricultural inspectors, marketing program committees, the Farm Advisor's office, farmers, growers' associations, land companies, and produce dealers were consulted before final figures were determined. Assistance received from the many persons and agencies interviewed is greatly appreciated.

LOS ANGELES COUNTY CROP REPORT FOR 1957
(Exclusive of Livestock Production)

Plant crops produced in Los Angeles County in 1957 from 177,100 harvested acres brought \$86,276,800. This was less than 1% below the 1956 total of \$86,755,500 from 198,600 crop acres. The 1957 returns were greater than either the 1955 or the 1954 values.

Continued loss of farm land to subdivision was largely offset by high production and generally favorable prices.

Citrus returns dropped to \$13,740,000 with a reduction of 7,850 acres. The crop brought \$16,918,000 in 1956. The navel crop volume and return was about the same. The lemon value of \$5,450,000 was \$1,100,000 under the previous year. Production per acre was higher and the total crop was about the same but prices were lower than 1956. Valencias dropped from \$6,600,000 to \$4,590,000 due to lower production from less acreage. Avocado returns increased to \$488,400 from \$438,900 because of higher prices for a smaller crop.

Vegetable production from 20,800 crop acres showed an increase in value of \$2,075,000 totaling \$22,114,800. This is the highest return since the \$23,109,000 total of 1951. The Celery crop returned \$7,260,000 due to good yields and high prices during the spring shipping season. Carrots, cabbage, green onions, and potatoes also showed sizeable increases in value. Strawberries brought \$2,800,000 about the same as last year.

In the Antelope Valley favorable spring weather resulted in a good set of fruit on almond, peach, and pear trees. Total returns surpassed last year by \$104,900. The Alfalfa hay crop brought higher prices with a return of \$4,855,000 from 34,000 acres.

Field crops returned \$10,466,700 compared with \$11,887,000 in 1956. The decrease was mostly due to acreage reductions of wheat, dry beans and field corn.

Nursery stock continued to increase in value with a total of \$26,600,000, a gain of \$2,100,000 from last year. At the end of 1957 the number of nursery locations in the county totaled 2,618, about one third of the state's total. Cut flowers were worth \$8,300,000, an increase of \$300,000 over 1956.

MILLION DOLLAR CROPS

Nursery stock	\$26,600,000	Lemons	\$5,450,000	Carrots	\$1,804,000
Cut flowers	8,300,000	Valencia oranges	4,590,000	Green onions	1,358,500
Celery	7,260,000	Navel oranges	3,440,000	Irrig.pastures	1,150,000
Alfalfa hay	5,865,000	Strawberries	2,800,000	Sweet corn	1,004,600

Valuation figures are based on delivery price at the market or FOB price on commodities shipped out of state. Price, acreage, and yield averages have been checked with state statistician's office, and prices were compared with Federal-State Market quotations. District agricultural inspectors, marketing program committees, the Farm Advisor's office, farmers, growers' associations, land companies, and produce dealers were consulted before final figures were determined. Assistance received from the many persons and agencies interviewed is greatly appreciated.

CROP REPORT

LOS ANGELES COUNTY

1958

AGRICULTURAL COMMISSIONER

LOS ANGELES COUNTY CROP REPORT FOR 1958
(Exclusive of Livestock Production)

Los Angeles County plant crops harvested from 172,435 crop acres brought \$88,335,800 in 1958, with apiary products included. With the lowest crop acreage of record, the total return was the largest since 1953, and has only been exceeded in ten of the 26 years since complete records have been kept.

Loss of farm land to subdivision was largely offset by high production of many crops and by favorable prices. Good growing weather, abundant rainfall, and better control of destructive pests were chiefly responsible for the good harvest and high quality. Chemical control of weeds materially increased grain and hay yields.

Citrus returns from 17,255 acres dropped to \$10,400,000 from \$13,740,000 in 1957. The biggest reduction was in navel oranges, with the lightest crop in many years. Lemon value of \$4,160,000 was \$1,290,000 under the previous year. Valencias, also a light crop, returned \$3,940,000 compared with \$4,590,000 in 1957.

In the Antelope Valley weather was conducive to good sets of peaches, Bartlett pears and almonds. Value of almonds was \$292,400 compared with \$232,000 the year before. Per acre production was higher than in other areas of the State where the crop was light due to adverse spring weather. Peach values gained substantially and pear returns were about the same for the past two years. The total value of Antelope Valley crops came to \$10,494,840, one of the highest on record.

Vegetable production worth \$23,512,900 from 20,595 crop acres showed an increase over 1957 of \$1,398,100. The celery crop brought \$8,250,000 because of high production and prices. This total was \$990,000 above that of 1957. Other gains were in green onions, Chinese food vegetables, radishes and rhubarb.

Field crops were worth \$11,484,500 compared with \$10,466,700 in 1957. Over half of the million-dollar increase came from abundant wheat and barley crops.

Nursery stock accounting for a third of the total plant crop returns, together with cut flowers, brought \$37,300,000. Los Angeles County probably remains the first county in the nation in value of these horticultural specialties, as it was in the last Federal census of 1954. It was then the third county in value of all farm crops, including livestock and dairy products. At the end of 1958 there were 2,694 nursery locations in the county, about one-third of the state total.

Million Dollar Crops

Nursery stock	\$29,432,000	Lemons	\$4,160,000	Green onions	\$1,500,000
Celery	8,250,000	Valencia oranges	3,940,000	Carrots	1,400,000
Cut flowers	7,900,000	Strawberries	2,660,000	Irrig. pastures	1,200,000
Alfalfa hay	6,197,300	Navel oranges	1,920,000	Wheat	1,046,300

Valuation figures are based on delivery price at the market or FOB price on commodities shipped out of state. Price, acreage, and yield averages have been checked with state statistician's office, and prices were compared with Federal-State Market quotations. District agricultural inspectors, marketing program committees, the Farm Advisor's office, farmers, growers' associations, land companies, and produce dealers were consulted before final figures were determined. Assistance received from the many persons and agencies interviewed is greatly appreciated.

Annual **CROP REPORT**
LOS ANGELES COUNTY

1959

AGRICULTURAL COMMISSIONER

LOS ANGELES COUNTY CROP REPORT FOR 1959
(Exclusive of Livestock Production)

Plant crops produced in Los Angeles County in 1959 brought \$86,217,800 from 157,500 harvested acres compared to \$88,187,500 from 172,400 harvested acres in 1958.

Planted acreage decreased very little below 1958. Two-thirds of the total decrease of 14,900 acres harvested was in dry-farmed field crops such as beans, grain and hay, which were reduced more than 10,000 acres and over \$1,300,000 because of drouth.

It seems likely that the county will retain its Federal Census rating as the leading county in the United States, in value of "Horticultural Specialities" which includes nursery stock and cut flowers. These crops returned \$37,936,800 which is more than in any previous year.

Citrus returns from 16,577 acres increased to \$13,028,000 from \$10,400,000 in 1958. Prices were lower but production of Navel and Valencia oranges was about double the previous year and the lemon crop was also larger. Valencia returns were up \$1,130,000 to make a total of \$5,070,000; while Navels brought \$2,480,000, an increase of \$560,000 over 1958. The lemon crop was valued at \$5,100,000 compared to \$4,160,000 the previous year.

Vegetable production worth \$18,297,000 from 19,090 harvested acres showed a decrease from 1958 of \$5,215,900. Most of the loss was in the celery crop which dropped from \$8,250,000 in 1958 to \$4,100,000 in 1959, due to much lower prices. Some other vegetable values were lower because of decreased acreage.

Field crops were worth \$11,349,300 compared to \$11,484,500 the previous year. Alfalfa hay increased in value more than \$1,000,000 but dry-farmed bean and hay crop production was reduced considerably due to lack of rainfall.

Avocados due to increased production totaled \$1,044,000, compared with \$838,800 in 1958. A heavy crop of Antelope Valley peaches increased the value to \$338,200.

Strawberries with less production from fewer acres showed higher returns due to stronger prices aided by early spring shipments to eastern markets, with a total return of \$3,167,500 from 650 acres.

The honey crop was the poorest in 26 years of record caused by a light bloom due to lack of rain. Only 675,000 pounds of honey and 11,000 pounds of beeswax were produced valued at \$66,000.

200,000 acres of range land were added to the field crops listing and the U.S. Department of Agriculture payments to farmers were deleted from this report in order to conform with the new state-wide tabulation system for county crop reports.

Million Dollar Crops

Nursery stock	\$30,458,000	Valencia oranges	\$5,070,000	Green onions	\$1,415,000
Cut flowers	7,478,800	Celery	4,100,000	Carrots	1,360,000
Alfalfa hay	7,274,000	Strawberries	3,167,500	Irrig. pastures	1,320,000
Lemons	5,100,000	Navel oranges	2,480,000	Avocados	1,044,000

Valuation figures are based on delivery price at the market or FOB price on commodities shipped out of state. Price, acreage, and yield averages have been checked with state statistician's office, and prices were compared with Federal-State Market quotations. District agricultural inspectors, marketing program committees, the Farm Advisor's office, farmers, growers' associations, and companies, and produce dealers were consulted before final figures were determined. Assistance received from the many persons and agencies interviewed is greatly appreciated.

HAROLD J. RYAN
Agricultural Commissioner

LOS ANGELES COUNTY CROP REPORT FOR 1960
(Exclusive of Livestock Production)

Plant crops produced in Los Angeles County in 1960 brought \$79,230,100 from 145,664 harvested acres. This compares with returns of \$86,217,800 from 157,500 harvested acres in 1959.

Farmers net returns for several crops were reduced by poor prices and short crops while their production costs stayed up. Continued though slower acreage loss to subdivision also contributed to the total decrease in crop value for the county.

Nursery stock and cut flowers continued to produce high returns per acre with a total value of \$37,810,000 from 2,880 acres. High value greenhouse production is increasing.

Value of citrus crops produced on 15,114 acres decreased to \$10,300,000 from \$13,028,000 in 1959 due to lower yields. There were 1,463 less bearing acres but most of the production loss resulted from smaller sized oranges while fewer lemons were picked because of very low by-products prices. Fresh citrus fruits brought slightly higher prices than in 1959.

A large crop of pears in Antelope Valley, with good prices, brought \$540,700, the highest returns since 1946. Peaches brought \$318,800 compared to \$338,200 in 1959. Almond production was down due to low yields from non-irrigated orchards with total returns of \$169,800. Avocado production for the county was again high but prices dropped sharply. Total returns were \$760,000, a reduction of \$284,000 from last year.

Vegetable production declined because of less acreage of many crops, particularly celery, potatoes and cabbage. Sweet corn acreage increased to 1,950 acres with a value of \$1,097,000. Value of all vegetable crops was \$15,451,300 compared to \$18,297,000 in 1959.

Field crops dropped from \$11,349,300 to \$9,761,600 due to decreased production of dry-farmed grain and to lower prices for alfalfa hay. Barley and wheat value dropped from \$1,281,800 to \$734,300. Acreage of irrigated pasture declined with a drop in value to \$900,000 compared to \$1,320,000 the previous year.

Strawberries returned \$3,448,500, the highest on record for the county. Increased early spring shipments to eastern markets at high prices helped strengthen local prices.

The honey crop was back to normal after a very poor crop in 1959. Production of 1,600,000 pounds of honey and 27,000 pounds of beeswax was valued at \$219,600.

Million Dollar Crops

Nursery stock	\$30,549,000	Valencia oranges	\$3,800,000	Green onions	\$1,270,000
Cut flowers	7,261,000	Strawberries	3,448,500	Sweet corn	1,097,000
Alfalfa hay	6,546,000	Celery	2,709,000	Carrots	1,094,000
Lemons	4,050,000	Navel oranges	2,120,000		

Valuation figures are based on delivery price at the market or FOB price on commodities shipped out of state. Price, acreage, and yield averages have been checked with state statistician's office, and prices were compared with Federal-State Market quotations. District agricultural inspectors, marketing program committees, the Farm Advisor's office, farmers, growers' associations, and companies, and produce dealers were consulted before final figures were determined. Assistance received from the many persons and agencies interviewed is greatly appreciated.

HAROLD J. RYAN
Agricultural Commissioner

March 29, 1961

AGRICULTURAL COMMISSIONER

LOS ANGELES COUNTY CROP REPORT FOR 1961
(Exclusive of Livestock Production)

Production of plant crops in Los Angeles County in 1961 amounted to \$73,485,100 from 95,635 harvested acres, as compared to \$79,230,100 from 145,664 harvested acres in 1960. Of this decrease of 50,029 acres, over 40,000 acres consisted of dry-farmed grain and hay crops that were planted but not harvested.

The third consecutive year of subnormal rainfall resulted in a near failure of dry-farmed hay and grain, and contributed to reduced production from irrigated tree crops. Lower prices per unit received for some of the more important crops also played a part in the reduced returns to farmers.

A light crop of citrus was harvested from 11,953 acres due to poor growing conditions. Returns per unit were higher for navel oranges and lemons but lower for Valencias. Avocado production dropped, but a much better price brought a higher total value than the year before. Because of poor fruit set, pear and peach production declined in the Antelope Valley, resulting in a total value of \$493,000 compared with \$859,500 for these two crops in 1960.

Returns for vegetables declined to \$13,550,900 compared to \$15,451,300 the year before, mainly due to 1,860 less acres planted because of the inroads into agricultural lands of subdivision and freeway construction. Sweet corn and carrot acreage increased 450 acres, with a corresponding increase in production and higher returns.

Field crops dropped about \$2,000,000 due partly to a lower price for alfalfa hay in the Antelope Valley and partly because of the virtual crop failure of dry-farmed grain and hay throughout the county.

Aided by a mild winter and dry spring weather, strawberry production per acre was the highest on record. Prices were high on the early crop, a portion of which was shipped to eastern markets. Total returns were \$3,625,000 from 500 acres.

Nursery stock and cut flowers totaled \$37,038,000, an amount which probably keeps Los Angeles County in first place in the United States in production of horticultural specialties, the same as reported by the Federal Census in 1959.

The honey crop also suffered from the lack of rainfall, with a production of 1,225,000 pounds of honey and 20,445 pounds of beeswax valued at \$180,700.

The number of million-dollar crops remained at eleven, namely, nursery stock, cut flowers, alfalfa hay, strawberries, lemons, Valencia oranges, navel oranges, carrots, celery, sweet corn and green onions.

The format of the report has been changed this year to agree with the standardized form now being put into use throughout the state. U.S. Department of Agriculture payments amounting to \$280,000 are not included.

Valuation figures are based on delivery price at the market or FOB price on commodities shipped out of state. Price, acreage, and yield averages have been checked with state statistician's office, and prices were compared with Federal-State Market quotations. District agricultural inspectors, marketing program committees, the Farm Advisor's office, farmers, growers' associations, and companies, and produce dealers were consulted before final figures were determined. Assistance received from the many persons and agencies interviewed is greatly appreciated.

KENNETH L. WOLFF
Agricultural Commissioner

April 24, 1962

Annual **CROP REPORT**
LOS ANGELES COUNTY

1962

AGRICULTURAL COMMISSIONER

LOS ANGELES COUNTY CROP REPORT FOR 1962
(Exclusive of Livestock Production)

The 1962 valuation of plant crop production in Los Angeles County showed a gain of more than five million dollars over the previous year. Harvest of 130,390 acres in 1962 resulted in gross returns of \$79,243,600 as compared with \$73,485,100 from 95,635 harvested acres in 1961.

This gain in valuation was largely due to higher returns realized by several important crops and to an increase in dry-farmed acreage harvested following adequate rainfall.

Eleven crops returned one million dollars or more. They were: nursery stock, cut flowers, alfalfa hay, strawberries, lemons, Valencia oranges, navel oranges, carrots, celery, sweet corn, and green onions.

Citrus: A total of 10,384 acres returned \$9,550,000. Higher navel orange yields with good returns and a gain in lemon production contributed to an increase in the total value. Valencia and grapefruit production declined slightly. (1961, 11,953 acres, \$9,125,000)

Other fruits and nuts: The largest Antelope Valley pear crop since 1946 raised pear valuation to \$488,200. Excellent fruit quality enabled growers to compete favorably with pears grown in other districts. Strawberries continue to be an important crop in the southern part of the county. High production on 550 acres brought returns of \$3,720,000. (1962, 6,932 acres, \$5,613,500 - 1961, 7,167 acres, \$5,381,600)

Field crops: The benefit of favorable rainfall was best reflected in the success of dry-farmed hay, grain and bean crops. Barley grain returns alone were up to \$987,000. Higher prices for alfalfa hay and expanded sugar beet plantings in the Antelope Valley also contributed to the gain over 1961. (1962, 96,905 acres, \$11,050,800 - 1961, 59,395 acres, \$7,901,100)

Vegetables: An over-all increase in returns more than offset the effect of fewer acres planted. Celery, carrots, sweet corn, and bunch vegetables with values totaling \$7,712,000, continued to be the county's leading vegetable crops. (1962, 13,660 acres, \$14,163,800 - 1961, 14,480 acres, \$13,581,200)

Nursery stock and cut flowers: Los Angeles County, shown in the 1959 Federal census as the nation's leading grower of horticultural specialty crops, appears to have retained that position. Flower crops with a high unit value are on the increase. (1962, \$38,232,000 - 1961, \$37,315,000)

Apiary products: The effects of adequate rain were shown in one of the largest honey crops in several years. An increase of \$452,300 in the value of apiary products emphasized the worth to the county's beekeepers of rainfall and subsequent good nectar flow. (1962, \$633,500 - 1961, \$181,200)

Valuation figures are based on delivery price at the market or FOB price on commodities shipped out of state. U.S. Department of Agriculture payments amounting to \$218,000 are not included. Price, acreage, and yield averages have been checked with the State statistician's office, and prices compared with Federal-State Market quotations. District agricultural inspectors, marketing program committees, the Farm Advisor's office, farmers, growers' association, and produce dealers were consulted before final figures were determined. Assistance received from the many persons and agencies interviewed is greatly appreciated.

CROP REPORT LOS ANGELES COUNTY

1963

AGRICULTURAL COMMISSIONER

LOS ANGELES COUNTY CROP REPORT FOR 1963
(Exclusive of Livestock Production)

Plant crop production in Los Angeles County for 1963 totaled \$83,712,500, an increase of \$4,468,900 over the previous year and the highest reached since 1959 when plant crops returned \$86,217,800. Acres harvested declined from 130,390 in 1962 to 128,600 in 1963. Increased production this year on this somewhat reduced acreage indicates that in the case of many crops higher yields per acre continue to be realized.

Important crops returning one million dollars or more included alfalfa hay, nursery stock, cut flowers, lemons, navel oranges, strawberries, valencia oranges, carrots, green onions, celery, and sweet corn.

Citrus: (1963 - 9,460 acres, \$10,200,000; 1962 - 10,384 acres, \$9,550,000) Navel and valencia orange production was good and prices high in 1963 despite some loss and downgrading of fruit due to a winter freeze. Lower lemon yields were offset by higher prices with a smaller percentage of the crop going to by-products.

Other fruits and nuts: (1963 - 6,920 acres, \$6,573,600; 1962 - 6,932 acres, \$5,613,500) Although Antelope Valley pear production was down 25% over the previous year, the highest returns on record were posted for this crop due in large part to the good appearance and quality of fruit from this area. Almonds produced a fine crop, coming back sharply from the low, freeze-affected 1962 crop. Strawberries returned a record \$4,450,000, as the effect of favorable growing conditions, steady demand, and high prices were felt.

Field crops: (1963 - 96,350 acres, \$14,209,500; 1962 - 96,905 acres, \$11,050,800) Increased acreage in Antelope Valley, high yields, and good prices pushed alfalfa hay returns to \$9,450,000, an all time record. The average yield is now approaching 7 tons per acre. Sugar beet production increased sharply, helped by favorable weather, improved cultural techniques, and fewer insect and disease problems. In general, other dry-farmed grain and hay crops were near normal as timely spring rains offset the effect of below average seasonal rainfall.

Vegetables: (1963 - 13,440 acres, \$15,317,200; 1962, 13,660 acres, \$14,163,800) High carrot yields, averaging 25 tons per acre on increased acreage, coupled with excellent prices pushed carrot values close to the two million dollar mark. Better yields and good prices also led sweet corn to increased returns of \$1,400,000.

Nursery stock and cut flowers: (1963 - \$37,075,000; 1962 - \$38,232,000) Los Angeles County appears to have retained its position as the nation's number one producer of horticultural specialty crops. The trend continues toward intensified use of available acreage and glasshouse space for specialized flower crops. Dichondra seed returns were high as a strong demand more than doubled wholesale prices.

Apiary products: (1963 - \$337,200; 1962 - \$633,500) The honey crop decreased sharply as the effect of light seasonal rainfall was felt on the wild nectar sources. Only 1,853,000 pounds of honey and 27,800 pounds of beeswax were produced.

Value figures reflect the gross valuation of plant crops as they are sold within the county and are based on delivery price at market or FOB price on commodities shipped out of state. U.S. Dept. of Agriculture payments to farmers of \$545,000 are not included. Price, acreage and yield averages have been checked with the State statistician's office and prices compared with Federal-State Market quotations. District agricultural inspectors, marketing program committees, the Farm Advisor's office, farmers, grower's associations, and produce dealers are consulted before the determination of final figures. Assistance received from the many persons and agencies interviewed is acknowledged and appreciated.
