California Department of Food and Agriculture

Agricultural Commissioners' Crop Reports

Los Angeles County

1971-1976

California County Agricultural Commissioners' Reports from the California Department of Food and Agriculture. This collection consists of annual crop and livestock data from each of the 58 California Counties. The collection covers 1915-1981; digitization of the rest of the collection is forthcoming.

This digitization project was funded by the Giannini Foundation of Agricultural Economics,
<http://giannini.ucop.edu/>.

The work was completed by the staff of the Giannini Foundation Library, University of California, Berkeley, <http://are.berkeley.edu/library/>. **Please contact the Library to consult the originals.**

Three vertical black bars of varying widths are positioned on the left side of the page. The bars are solid black and extend from near the top to near the bottom of the page.

LOS ANGELES COUNTY

1971 CROP & LIVESTOCK SUMMARY

Gross returns from plant crop and livestock production in Los Angeles County totaled \$123,205,040 in 1971.

Paced by record nursery stock sales, receipts from all plant crops rose to \$73,439,040, the highest total in five years. Livestock production totals, however, declined almost 20% to \$49,766,000 as the result of a continued drop in milk production.

Nine crops--excluding livestock categories--returned \$1 million dollars or more in 1971. They were--lemons, \$1,810,000; strawberries, \$3,006,000; alfalfa hay, \$5,995,000; bean sprouts, \$1,782,000; sweet corn, \$2,327,000; mushrooms, \$1,059,000; green onions, \$1,414,000; cut flowers, \$4,556,000; and nursery stock, \$40,641,000.

While acreage devoted to citrus crops declined by 11% in 1971, total gross returns of \$3,290,000 remained close to that reported the previous year. Better navel and valencia orange production and higher prices received for lemons were responsible for offsetting the declining acreage.

Other fruits and nuts returned \$2,240,240 in 1971 despite the effect of early spring frosts upon yields of some crops. While the almond crop was almost a total loss due to blossom freeze damage, peaches and pears enjoyed near record production. Avocado returns decreased almost 50% as the result of lower prices received. Strawberry returns rose slightly on stronger prices in 1971 with total receipts amounting to \$3,006,000 despite a 12% drop in acreage and early frost damage.

The total value of 273,890 acres of field crops in 1971 was \$9,080,800. Barley and wheat production was down due to drought, and alfalfa hay--our major field crop--decreased in value as the result of an acreage reduction. Garbanzo bean harvested acreage increased as the result of good growing conditions.

Vegetable crops harvested from 6,376 acres returned \$10,063,200 during the year. Harvested acreage losses in dry onions, radishes and mustard greens were offset somewhat by increases in acreage of sweet corn, leaf lettuce and squash. Sweet corn continues as the county's number one vegetable crop with \$2,327,000 returned to growers from 2,730 acres. Bean sprout production for Chinese food dishes continues to expand each year returning \$1,782,000 during 1971.

Nursery stock production--valued now at \$40,641,000--increased greatly from the previous year when \$36,837,000 was returned to local nurserymen. Increased out-of-state demand for ornamental trees and shrubs contributed to this significant growth as did stronger prices for ground covers, indoor flowering plants and geranium cuttings. Cut flower production remained near the \$4½ million dollar mark despite a slight decrease in acreage. Christmas tree production was valued at \$350,000 with 211 acres now devoted to "choose and cut" plantings.

Apiary production receipts jumped to \$540,000 during 1971. Although the honey crop--some 1,860,000 pounds--demanded a substantially better price, inclusion of pollination fees collected by Los Angeles County beekeepers in our report also contributed to the highest returns in many years.

A steady decrease in land available for the production of livestock and poultry is again reflected in this year's report. Fluid milk was the major contributing commodity. Milk production dropped from \$34 million in 1970 to \$23 million in 1971. Strengthening cattle prices and a modest increase in poultry number offset other minor livestock changes.

Valuation figures are based on delivery price at the market or on FOB price for commodities shipped out-of-state. All prices have been compared with Federal-State Market News quotations. U.S. Department of Agriculture payments amounted to \$324,100 and are not included in the total gross returns reported.

Gross return figures are often very deceiving. Net can be determined only by deducting all of the growers' costs and often the grower ends up with a loss instead of a profit. A case in point would be the citrus industry in Los Angeles County where increased cultural costs and increased taxes reflect the precarious economic condition of agriculture in many areas.

	<u>Valencias</u>	<u>Navels</u>	<u>Lemons</u>
Cultural Costs/Acre	\$ 388	\$ 388	\$ 413
Taxes/Acre	350	300	350
Misc. Costs/Acre	<u>235</u>	<u>235</u>	<u>235</u>
Total Costs/Acre	973	923	998
Gross Returns/Acre	797	781	1,205
Net/Acre	-\$ 176	-\$ 142	+\$ 207

Assistance received from the many individuals and agencies consulted is acknowledged and greatly appreciated.

LOS ANGELES COUNTY PLANT CROP VALUES *A FIFTEEN YEAR COMPARISON*

LOS ANGELES COUNTY 1972 CROP & LIVESTOCK SUMMARY

Gross returns from plant crop and livestock production in Los Angeles County totaled \$120,668,000.

Paced once again by record wholesale nursery crop sales, total cash receipts from all plant crops increased to \$77,240,000, the highest total since 1967. Livestock returns continued to drop however declining some 13% to \$49,099,000 for the year.

Ten crops--excluding livestock categories--returned \$1 million dollars or more in 1972. They were: lemons, \$1,580,000; strawberries, \$2,760,450; alfalfa hay, \$5,655,000; bean sprouts, \$1,800,000; sweet corn, \$2,048,000; green onions, \$1,559,000; mushrooms, \$1,080,000; sugar beets, \$1,017,000; cut flowers, \$4,507,000; and nursery stock \$46,245,000.

Due largely to a drop of nearly 25% in acreage, citrus crops returned only \$2,549,900 in 1972. In the case of oranges, increases in unit price were offset by yield reductions. Better lemon yield this year helped meet lower unit prices.

Grain and other field crops returns were down in yield throughout the County due primarily to lack of adequate rainfall. Fortunately, high demand resulted in higher prices and field crops as a group returned \$8,774,700.

Other fruit and nut crops produced \$2,366,900 for growers last year with almond growers in the Antelope Valley harvesting their best crop since 1969. While peach production was average, pears suffered greatly because of cold injury and expected alternate-year bearing tendencies. Good demand and higher prices at roadside stands contributed to higher returns for Antelope Valley fruit. Better prices for avocado and strawberries nearly overcame loss of acreage and lower yields for these crops.

Over 6,000 acres of vegetables were harvested during 1972 with sweet corn, green onions, radishes, leaf lettuce and cabbage the main crops produced. Over 25 other vegetables were marketed. Returns to vegetable growers before cultural and selling costs are deducted totaled \$10,036,200.

Gross income for all nursery stock reached an all time high of \$46,245,000, a 15% increase over 1971. As in recent years, the trend toward production of ornamental stock for out-of-state sales was the strongest reason. One-third of all ornamental plants produced in Los Angeles County are now being shipped to some 47 of the fifty states. A renewed environmental interest also contributed to better local demand. Cut flower production remained near the \$4 million dollar mark.

Apiary production decreased to \$328,480 in 1972 although honey prices reached record highs because of a world-wide shortage. Poor honey flow was responsible for the yield decrease.

Livestock and poultry production continued to decline in Los Angeles County during 1972. The 13% drop in livestock and poultry production was attributed to a steady exodus of dairy animals. Small decreases of other animal numbers were offset by increased prices. Beef and pork prices remained high for the entire year while poultry and egg revenues climbed during the last quarter of the reporting period.

Valuation figures are based on delivery price at the market or on FOB price for commodities shipped out-of-state. All prices have been compared to Federal-State Market News quotation. United States Department of Agriculture payments amounted to \$438,072 are not included in the total gross returns reported. All figures are gross values and do not reflect net farm income.

Assistance received from the many individuals and agencies consulted is acknowledged and greatly appreciated.

RALPH W. LICHTY
Agricultural Commissioner

LOS ANGELES COUNTY

1973 CROP & LIVESTOCK SUMMARY

Gross returns from plant crop and livestock production in Los Angeles County rose to \$136,802,000 in 1973, the highest total since 1969.

Higher prices received for plant crops and improved yields more than offset some loss of acreage and a continuing decrease in the number of dairy herds. Record wholesale nursery crop sales -- up 10% -- led all plant crop groups showing increases.

Twelve crops -- excluding livestock categories -- returned \$1 million dollars or more in 1973. They were: strawberries, \$3,962,000; lemons, \$1,577,000; avocados, \$1,096,000; alfalfa hay, \$8,035,000; carrots, \$1,584,000; bean sprouts, \$1,902,000; green onions, \$2,245,000; sweet corn, \$1,675,000; bedding plants and ground covers, \$9,110,000; ornamental trees and shrubs, \$31,003,000; indoor decorative plants, \$6,413,000; and cut flowers, \$3,915,000.

Citrus crops returned \$2,033,000 during 1973 despite a hefty 30% loss in acreage. Higher prices were received for all varieties, with lemons showing the highest unit returns. Average yield was slightly below the previous year.

Avocado yields returned to near normal following an extremely small 1972 crop to help raise other fruits and nuts as a group to \$3,052,800. A frost-free bloom period resulted in a better deciduous fruit crop set in the Antelope Valley. The "U-pick" cherry crop becomes increasingly important as young trees come into production.

A 30% yield increase over 1972 and a slight increase in acreage resulted in \$3,962,000 strawberry crop, the best since 1966. Unit prices held at near the same level as those reported the previous year.

Animal feed crops such as alfalfa hay, grain hay, and grains generally, showed higher relative price gains than those field crops sold for direct consumer use. Alfalfa hay returned the highest prices on record, averaging over \$55 per ton. Total receipts from all field crops totaled \$11,850,000.

Over 5,800 acres of vegetables were harvested during 1973, with sweet corn, green onions, mushrooms, radishes, leaf lettuce and cabbage the main crops produced. Over 26 other vegetables were also grown and harvested. Returns to growers totaled \$11,853,100.

Total gross receipts rose to \$48,759,000 in 1973 for livestock and poultry products. Consumer boycotts, high feed costs, relocation of dairy herds to outside of the County and other negative effects were offset by slightly larger beef cattle inventories and higher prices received.

Apiary production rose to \$712,200 in 1973 due largely to increased worldwide demand for honey and better prices for pollination services.

For the third year in a row, nursery stock exceeded the previous all time high, returning \$50,665,000. Increased local and out-of-state demand prompted by continued interest in home gardening and commercial landscaping contributed to the 10% increase in gross returns. Cut flower production suffered from a decrease in acreage and reduced demand.

All figures reported are gross values and do not reflect net farm income. Valuation figures are based on delivery price at the market or on FOB price for commodities shipped out-of-state. All prices have been compared with Federal-State Market News quotations. United States Department of Agriculture payments dropped to \$168,761 from the \$438,012 reported the previous year and are not included in the total gross returns reported.

Assistance received from the many individuals and agencies consulted is acknowledged and greatly appreciated.

	1972	200(*)	150	30,000	"	.30	9,000

(✓) Does not include estimated \$78,038.00 Sugar Act payments for 1973 or \$83,816 for 1972.

(✓) Amount shown for 1973 includes \$252,000 paid for sheep and cattle grazing on alfalfa and barley stubble; 1972 includes \$220,000 for such grazing. Straw also included in misc. figure.

(*) Included in harvested acreage shown for alfalfa hay.

(**) High unit value figure was caused by the entire lima bean crop being sold for seed use.

LOS ANGELES COUNTY 1974 CROP & LIVESTOCK SUMMARY

Gross receipts from farm crop and livestock production in Los Angeles County increased to \$158,369,300 in 1974, the highest total since 1967.

Plant crop and apiary product dollar returns were up considerably, reaching \$104,157,300 as compared to a 1973 total of \$88,000,000. Returns from livestock and poultry production totalled \$54,212,000 -- up from the previous year's total of \$48,759,000.

The modest increase in animal production was mainly generated by the increased price of milk. An increased number of laying hens and a slight increase in egg production was the result of restocking of poultry ranches after the Newcastle disease outbreak. Other categories reflected a stable production with slight decline in price.

County-wide, nursery stock and cut flower production continues to lead all crops in total dollar revenue -- over \$64,145,000 in 1974. Total gross sales for all types of nursery stock were over \$9,000,000 above 1973, hitting the sum of \$59,921,000. In the first half of 1974, increase in the volume of nursery stock sales and a slight rise in unit prices more than made up for a slowdown in the second half of 1974. Vegetable bedding plant production showed a heavy gain due to strong interest by the general public in growing their own vegetables. Cut flower producers probably felt the economic downturn more so than the nursery stock or vegetable growers.

All figures reported are gross values and do not reflect net farm income or profit to the producer. Increased production costs -- energy, labor, equipment, and other required input -- have in many cases offset higher prices received for products produced.

The San Fernando Valley - Saugus-Newhall area produced plant crops worth \$19,000,000 in 1974. This region specializes in production of root type crops such as carrots, green onions, radishes and dry onions as well as sweet corn for roadside stand sale. Some 3,000 acres were harvested returning \$7,800,000. Field crops, citrus and walnuts, other vegetables and nursery stock make up the balance of production for the area.

The San Gabriel Valley and Eastern Los Angeles County area produced crops worth \$25,000,000 in 1974. Approximately 160 acres of strawberries returned \$2,000,000 of the total expected county returns of \$3,600,000 from 325 acres. Some 1,300 acres of citrus are still bearing in the area and returned an estimated \$2,000,000. Orange production suffered from rain and cool weather during the bloom period of 1973 affecting the 1974 crop harvest. Receipts were good for lemons from 850 acres. Nursery sales from this area, with much of the stock being shipped out of county or to other states, represents 31% of the County's total nursery production. Farm grown "U-cut" Christmas tree sales also did well. Nursery stock, cut flowers and Christmas tree sales produced \$18,800,000 of the revenue. Grain and hay crops from the Walnut district had favorable growing weather and higher than average price returns.

Avocado production in the Whittier-LaHabra Heights district decreased substantially in 1974 due to the poor set of fall and winter varieties. Price per pound remained high throughout the year. Avocado receipts amounted to \$924,000 for 1974 to Los Angeles County growers.

Livestock and dairy production in the Artesia-Norwalk district continues to decline under the impact of residential and commercial development.

In the Antelope Valley, plant crops returned \$15,500,000, the highest total on record. Alfalfa hay continued to be the number one crop producing \$8,375,000 from 19,800 acres. Growing conditions were generally good for increased yields, but a heavy infestation of alfalfa weevil damaged the first cutting and some water shortages reduced the total tonnage. Barley and wheat grains were harvested from 19,500 acres, an increase of 5,600 acres over 1973. These grains sold for the highest price per hundred weight on record. Sugar beet plantings were affected for the first time with powdery mildew disease. This resulted in less tonnage and lower sugar contents in the beets. Returns for the 1974 crop were about the same as 1973 as higher sugar prices helped compensate for the lower yields and sugar content. The Antelope Valley peach crop production was the highest on record. Pear sales exceeded the million dollar mark for the first time as fruit prices were up more than 50% during a year with good production.

The Gardena-South Bay district is one of the major growing areas producing better than 30% of the county-wide total of nursery stock. Bean sprouts, mushrooms, greens, leaf lettuce, radishes, other vegetables and strawberries contributed to our total metropolitan and southern area crop production of \$44,000,000 for 1974.

Valuation figures are based on delivery price at the market or on F.O.B. price for commodities shipped out-of-state. All prices have been compared with Federal-State Market News quotations. United States Department of Agriculture payments dropped to \$90,485 from the \$168,761 reported the previous year and are not included in the 1974 total gross returns reported.

Assistance received from many individuals and agencies consulted is acknowledged and greatly appreciated.

PAUL B. ENGLER
Agricultural Commissioner

LOS ANGELES COUNTY
1975 CROP & LIVESTOCK SUMMARY

Gross receipts from farm crop and livestock production in Los Angeles County dropped slightly in 1975 to \$152,571,900. Plant crop and apiary product returns continued to gain over 1974, but the continued exodus of dairies from the County reduced livestock returns and the overall County receipts.

A wet spring provided excellent forage for range cattle in 1975 and fewer cattle produced a greater dollar return than in 1974. Turkey prices were higher, but a decrease in inventory lowered dollar returns. Chicken eggs were up in value, but market milk and wool were down significantly. Milk products continue to lead other livestock products in total valuation.

Vegetable crop production increased substantially by \$5,800,000, raising the 1975 total to \$20,873,900. The strong gain in vegetable crops was due to increased acreage in some vegetable types and strong price increases.

County-wide, nursery stock and cut flower crops maintained their lead over all plant crops with a total dollar value of \$62,468,000.

Individual crops showing strong gains were dry onions (\$3,216,000), green onions (\$4,822,000), sweet corn (\$3,033,000), and indoor foliage plants (\$9,482,000).

All figures reported are gross values and do not reflect net farm income or profit to producers. Increased production costs often offset higher prices received.

The San Fernando-Saugus-Newhall area had an increase in gross receipts of \$2,000,000 in 1975 to \$21,000,000. This gain was mainly from sweet corn and green onion production. The area has a number of vegetable farms that sell directly to the public from retail stands. Field crops, walnuts, citrus, and nursery products make up the balance of production for the area. The San Gabriel Valley and Eastern Los Angeles County produced a crop value of \$24,000,000 for 1975. A slight drop in total value from 1974 was largely due to lower strawberry yields -- the result of a wet spring. Also, higher citrus yields were offset by lower prices and a reduction in acreage. Field crops increased in total value as ideal growing conditions produced high yields that sold at high prices.

The crop value for the Antelope Valley increased in 1975 to \$16,305,000. Alfalfa is still the number one crop in the Valley. Sugar beets had a larger tonnage, but lower prices reduced the total value for 1975. An increase in acreage of dry onions and good prices produced a substantial gain for this crop. Fruits and nuts in the valley were damaged by late frost, and this was reflected by a crop failure in almonds, and lower yields in cherries, peaches, pears, and apples.

Crop production in the Metropolitan and Southern area of the County exceeded \$43,000,000. This area produces most of the mushrooms and bean sprouts in the County and a large share of the nursery stock. The area also grows much of the production of greens, root crops, and leaf lettuce.

Valuation figures are based on delivery price at the market or on F.O.B. price for commodities shipped out-of-state. All prices have been compared with Federal-State Market News quotations.

Assistance received from many individuals and agencies consulted is acknowledged and greatly appreciated.

LOS ANGELES COUNTY
1976 CROP & LIVESTOCK SUMMARY

Drought conditions in Los Angeles County during 1976 lowered yields in certain crop categories such as hay, grain, bean, cattle, and apiary products. Nevertheless, gross receipts from farm crops and livestock production increased to \$174,195,300; twenty-one million above the figure reported in 1975. Because of high, off-setting increases in vegetables, nursery stock, and irrigated field crops, the county returns were the highest in the past ten years.

Continuing urbanization brought a reduction in acreage of citrus in the eastern portion of the county. Coupled with lower prices during the later half of 1976, receipts were down over one million dollars. Yields were up in almonds, figs, and apples and with an increase in price in avocados and peaches, the total receipts for other fruits reached \$3,415,000. Strawberry acreage increased only slightly over 1975. Ideal growing conditions, improved cultural practices, and higher prices, however, brought \$4,724,000, a gain of one million dollars over 1975.

Grains, hay, and dry bean plantings dependent upon rainfall experienced a reduction of over one million dollars. Barley acreage harvested for grain was reduced by half over the previous year with the remainder cut as poor quality hay or not harvested at all. Reduced plant growth in the county's rangeland decreased estimated values 30%. Apiary products, another commodity effected by the drought, dropped almost in half to \$383,900 in 1976. A thousand acre increase in alfalfa to 20,865 acres and an increase in price and yield brought growers \$12,363,000.

Despite an increase in acreage, slightly lower yields and a price decrease resulted in only a minor change in returns for sugar beets. Total production in field crop values reached \$16,007,300, an increase of \$2,700,000 over 1975.

An increase of 1,000 acres, along with higher prices, resulted in a gain of six million dollars to the county's vegetable farmers. The county's sweet corn crop produced lower receipts due to less acreage and severe damage by birds. Dry onion acreage was up 500 acres and yields increased, but prices dropped from a record high in 1975. A great volume of Los Angeles County's vegetable production is sold at retail. This is reflected in the large returns to growers from tomatoes, squash, sweet corn, melons, and pumpkins. Total returns to the county's vegetable growers was \$26,632,500, an increase of 21% over 1975.

Gross receipts for 1976 from all categories of nursery stock increased by 17% over the 1975 season. The large dollar increase was due mostly to greater volume of plants being sold out of state and a general price increase in all types of nursery stock.

The total nursery dollar figure for 1976 was \$70,370,000. This is the highest figure ever attained for nursery categories in Los Angeles County. Among the record totals, the leading categories were: ornamental trees and shrubs, \$41,000,000; indoor foliage plants, \$11,531,000; bedding plants, \$6,204,000; and ground covers, \$4,350,000.

Generally, total livestock and poultry production showed an increase in 1976 over the previous year. Although there was a decrease in fed cattle due to drought and in turkeys, this was more than offset by fryers and milk production both of which were up during 1976. In addition, the higher egg price minimized the effect of fewer eggs produced.

Valuation figures are based on delivery price at the market or on F.O.B. price for commodities shipped out-of-state. All prices have been compared with Federal-State Market News quotations.

Assistance received from many individuals and agencies consulted is acknowledged and greatly appreciated.
