California Department of Food and Agriculture

Agricultural Commissioners' Crop Reports

# Riverside County

1925-1942

(1933-1936 not available)

California County Agricultural Commissioners' Reports from the California Department of Food and Agriculture. This collection consists of annual crop and livestock data from each of the 58 California Counties. The collection covers 1915-1981; digitization of the rest of the collection is forthcoming.

This digitization project was funded by the Giannini Foundation of Agricultural Economics,  
<http://giannini.ucop.edu/> .

The work was completed by the staff of the Giannini Foundation Library, University of California, Berkeley, <http://are.berkeley.edu/library/> . **Please contact the Library to consult the originals.**

\* O--Oranges

L--Lemons

\*\* Difference in production and valuation caused by early frost.

\*\*\* Difference from last year caused by numerous vegetables being itemized separately.

COMPILED January 1, 1930

Three vertical black bars of varying widths are positioned on the left side of the page. The bars are solid black and extend from near the top to near the bottom of the page. The middle bar is the widest, flanked by two narrower bars.

1938

ANNUAL REPORT  
of the  
AGRICULTURAL COMMISSIONER

AGRICULTURAL ECONOMICS LIBRARY  
UNIVERSITY OF CALIFORNIA  
DAVIS, CALIF.

County of Riverside

Year 1938

Generally speaking the mandatory duties of the County Agricultural Department are found in the Agricultural Code of the State of California - Sections 1 to Section 1301. In addition to these requirements are the proclamations and orders issued by the Director of Agriculture and countersigned by the Governor, covering special problems. There are also the Orders of the Postmaster General in regard to the inspection of plant products at point of destination.

During the past few years many new duties have been added to the work of the County Commissioner, among these being Apiary inspection and control and eradication of bee diseases, and the Honey Standardization Law (A.C. 271 - 285.4, A. C. 840 - 845.2, A. C. 991 - 998). The Egg Standardization Law, formerly administered by the State Health Department, was transferred to the Agricultural Department in 1938 (A. C. 1101 - 1108).

The Commissioner is also charged with the enforcement of the Seed Potato Law, the Horticultural District Protection Act, the Wild Bird and Animal Importation Act, Agricultural Seeds, and the Agricultural Prorate Act (A. C. 911 - 964). In 1929 was added the Food Stuffs Act and in 1933 Grain Warehouse Inspection was added; also Spray Residue and Nursery Stock Grades in addition is the Predatory Animal Act (A. C. 161); Fruit and Vegetable Certification (A.C. 751), and in 1935 a new Pest Abatement District Act was passed.

A recent check up on the work of the Agricultural Department shows that in 1937 there were 435 laws, quarantine orders, proclamations, and regulations being enforced by the County Agricultural Commissioner, as compared to 133 such duties in 1917 - or an increase in duties of approximately 266%.

QUARANTINE:

The State Law provides that all incoming shipments must be held for inspection. This covers Post Offices, Express Offices, Depots - both train and bus, trucks, and other vehicles. During the year many thousands of such package shipments have been inspected both by the County and State officers and many lots of such products have been found to be infested with insect pests and diseases not known to exist in Riverside County or in the State of California. Such interceptions included such pests as Citrus White Fly, Cherry Fruit Fly, Cotton Boll Weevil, Mexican Fruit Worm, and other similar dangerous insect pests.

the work of the County Commissioner, among others, and the Honey Standardization Law (A.C. 271 - 285.4, A. C. 840 - 845.2, A. C. 991 - 998). #### QUARANTINE:

The State Law provides that all incoming shipments must be held for inspection. This covers Post Offices, Express Offices, Depots - both train and bus, trucks, and other vehicles. During the year many thousands of such package shipments have been inspected both by the County and State officers and many lots of such products have been found to be infested with insect pests and diseases not known to exist in Riverside County or in the State of California. Such interceptions included such pests as Citrus White Fly, Cherry Fruit Fly, Cotton Boll Weevil, Mexican Fruit Worm, and other similar dangerous insect pests.

#### STANDARDIZATION:

In Riverside County there are approximately 200,000 acres under cultivation from which are harvested approximately 100 different kinds of fruits, nuts, vegetables, seed and grain crops. Some, at least, of any and all crops grown in California are grown in Riverside County.

The Agricultural Code provides for specific grade standards and packing requirements on forty-two commodities specifically named in the Code, and the deceptive pack provision extends to all commodities.

The work on Standardization covers Packing Houses, ranches, retail markets, and wholesale market inspections. During the past year this inspection service has been carried on in all agricultural producing sections of the County.

The value of this inspection service is demonstrated by the fine cooperation received by the enforcing agents from the various commodity groups.

### PEST CONTROL:

A new pest control service has been inaugurated by the State Department of Agriculture, the Biological Control Division of the United States Department of Agriculture, in cooperation with the County Officials. Quoting from a report by A. A. Traub, Field Superintendent of the U. S. Biological Survey - "Two hunters and Trappers, working seventy-three days - up to an including December 1st, 1938, - coyotes poisoned and trapped - grand total 1,081; Bob cats trapped and destroyed - 171." This cooperative work was engaged in upon representation made by the poultry men, sheep men and other farmers of Riverside County, that coyotes were causing heavy agricultural losses in the back country of Riverside County.

### DISTRICT GOPHER CONTROL:

The Palo Verde Valley District gopher control program is again under way in the Palo Verde Valley. In 1936-37 it was found that pocket gophers had built up to such an extent in that locality as to be causing serious economic loss to the farmers. This loss was not only occasioned by the destruction of crops but by the breaking of the levees, ditch banks, flooding the fields and highways, etc. The work was so successful last year that it is being followed up again this year as a cooperative effort by the growers in the Valley.

The district has provided sufficient funds to keep a crew of men busy seven or eight months out of the year, under the supervision of this Department and they are purchasing several tons of poison, at cost, through the County Agricultural office.

### WEED CONTROL:

The question of control of noxious weeds has become one of major importance in the western part of the United States during recent years. New and unknown weed seeds escape by means of imported seeds. This has probably brought about the wide dissemination. Delegates from the eleven western states now meet annually in an attempt to solve the problem.

The question is of such importance that the matter was again discussed at a recent Farmers and Fruit Growers Convention, held at Ventura, on December 5th and 6th, 1938, and a resolution was offered and passed, recommending that - "the eradication or control of injurious weeds and other pests, existing on lands subject to federal control which lands serve as sources of infestation for agricultural areas amenable to state pest control laws, be financed by the federal government --- etc." (Resolutions attached).

Weeds are the cause of heavy losses to farmers, fruit growers and seeds men. They foul agricultural crops and agricultural seeds. They rob the soil, clog ditches and fields. Some are poisonous to animals, are a decided fire hazzard, and at times many are preferred hosts of some of our most serious insect pests. An example would be that of the Piute Weed of the Palo Verde Valley.

This weed harbors an insect known as "Say" bug. An insect which attacks alfalfa and other seed crops, and is particular-

only occasioned by the destruction of crops but by the breaking of the levees, ditch banks, flooding the fields and highways, etc. The work was so successful last year that it is being followed up again this year as a cooperative effort by the growers in the Valley.

The district has provided sufficient funds to keep a crew of men busy seven or eight months out of the year, under the supervision of this Department and they are purchasing several tons of poison, at cost, through the County Agricultural office.

#### WEED CONTROL:

The question of control of noxious weeds has become one of major importance in the western part of the United States during recent years. New and unknown weed seeds escape by means of imported seeds. This has probably brought about the wide dissemination. Delegates from the eleven western states now meet annually in an attempt to solve the problem.

The question is of such importance that the matter was again discussed at a recent Farmers and Fruit Growers Convention, held at Ventura, on December 5th and 6th, 1938, and a resolution was offered and passed, recommending that - "the eradication or control of injurious weeds and other pests, existing on lands subject to federal control which lands serve as sources of infestation for agricultural areas amenable to state pest control laws, be financed by the federal government --- etc." (Resolutions attached).

Weeds are the cause of heavy losses to farmers, fruit growers and seeds men. They foul agricultural crops and agricultural seeds. They rob the soil, clog ditches and fields. Some are poisonous to animals, are a decided fire hazard, and at times many are preferred hosts of some of our most serious insect pests. An example would be that of the Piute Weed of the Palo Verde Valley.

This weed harbors an insect known as "Say" bug. An insect which feeds on cotton, alfalfa and other seed crops, and is particularly damaging in the cotton fields. The only known method of control is in the destruction of the preferred host plant, which in this case is the Piute Weed, and which is destroyed by cutting, covering with oil and burning.

A campaign of this type was engaged in in 1937 in the Palo Verde Valley, with the following agencies in cooperation. The Palo Verde Valley Irrigation District, the Elythe Chamber of Commerce, the Palo Verde Valley Farm Bureau, the Santa Fe Railroad, the Riverside County Road Department, the Riverside County Supervisors, and the County Agricultural Commissioner. This work was so successful that it is again being carried on this year in an attempt to so reduce the insect population that it may be again profitable to raise cotton in that Valley.

#### ORCHARD SURVEY:

The orchards of the County are surveyed from time to time to ascertain whether or not new or unknown insect pests have become established. The citrus orchards are inspected annually and a report is made to the grower, outlining the pest conditions found at the time of the inspection.

Citrus White Fly has been reported, the last year, from Marysville and Bakersfield, California, and a small infestation has been reported from Orange County. Many thousands of dollars were expended on eradication of this orchard pest.

During the year we have completed a Citrus White Fly survey in the orchards of Riverside County. This survey disclosed that while one or two of the White Fly family were present, yet Citrus White Fly did not occur here.

Surveys of this type are made from time to time in the hope that should a dangerous pest become established it might be found immediately, when the cost of eradication would be but little, rather than at a time when it has spread to large acreages when the cost of eradication might be prohibitive.

#### HUMAN DISEASES IN GROUND SQUIRRELS:

Bubonic Plague in ground squirrels, originally reported from San Francisco county a few years ago, has now spread to several counties in the State and was recently reported as having been found in the San Bernardino National Forests.

Eradication programs are carried on by Federal, State and County authorities wherever this condition is found.

Tularemia has been reported in wild rabbits in the Blythe section of Riverside County. Recently five cases were reported from the Colorado river area. These situations are being closely watched by agricultural and health authorities.

#### SEEDS:

The seed industry of Riverside County is rapidly coming to the front. Alfalfa seed of fine grade is being produced in both the Palo Verde Valley district and the Hemet-Murrieta section of this County.

Sugar beet seed and other agricultural seeds are now being produced here. The agricultural Seed Inspection Act offers many perplexing problems which it is hoped will be solved by the State Agricultural Seed Council in cooperation with the various seed producing and importation agencies.

#### NEW LAWS:

Under new procedure during the past few years many of our agricultural products are being marketed under Federal and State Prorate Acts and the California State Marketing Act. The State Law names the Agricultural Commissioner as the official to prepare and certify grower lists.

Sugar beet seed and other agricultural seeds are now being produced here. The agricultural Seed Inspection Act offers many perplexing problems which it is hoped will be solved by the State Agricultural Seed Council in cooperation with the various seed producing and importation agencies.

#### NEW LAWS:

Under new procedure during the past few years many of our agricultural products are being marketed under Federal and State Prorate Acts and the California State Marketing Act. The State Law names the Agricultural Commissioner as the official to prepare and certify grower lists.

During the past year we have certified lists to the State Prorate Commission, of County Olive Growers, Peach Growers, Apricot Growers, Grape Growers and Grapefruit Growers.

During the year the Desert area grapefruit Association set up a unique plan for the merchandizing of their 1938-39 grapefruit crop. This district included the entire grapefruit producing areas of Arizona, the County of Imperial, and the Coachella Valley of Riverside County.

The plan is known as the "Desert Grapefruit Area Trust Agreement", whereby the grapefruit growers of that district deeds, in trust, all the grapefruit owned and controlled by the growers in the area to a Board of Trustees - composed of three persons. The Trustees are to hold the grapefruit in trust for the grower with complete control and regulation of same, including volume, grade, size and quality, and as to the minimum price for which it shall be sold.

An advisory Committee is elected by the growers - composed of two grapefruit growers of the Imperial Valley, two from the Salt River Valley, two from the Yuma Mesa, and two from the Coachella Valley.

Several meetings have been held and the program has been set up. The trustees have established the following minimum prices. No fruit shall be sold for less than \$25.00 per ton for loose fruit F.O.B. Los Angeles. No fruit shall be sold on the Los Angeles auction market for less than .80¢ per box for place packed fruit.

When this agency went into effect on November 14th, 1938, desert grapefruit was selling on the Los Angeles market at \$12.00 per ton, since which time the price has been raised to the minimum or more and no contract fruit is being sold for less.

RIVERSIDE COUNTY GROWERS' INSECTARY:

This Insectary was erected by the Citrus growers of the County. The building site was donated by the Chase Eros. and the entire plant deeded to the County of Riverside several years ago. For some time it was run at full capacity in the production of Cryptolaemus for the control of wealybug. This campaign being successful the Insectary was closed for a period of two or three years and was again opened on October 10th, 1937, for the purpose of producing certain Red and Black scale parasites in an attempt to prove their effectiveness in the orchards of this County.

This service is being performed at the request of the Riverside Citrus Committee, represented by a sub-committee known as the Insectary Committee. The Sub-committee is composed of Arthur S. Holden, Chairman, D. S. Bell, George Cole and Arthur McDermont, as the other members.

The only additional fund budgeted last year for this work was \$1000.00 for insectary supplies. Supervision and labor cost was not budgeted which has meant, of course, that it has been necessary to take two of our regular men from their regular duties and use them on this work - reducing our available man power considerably in our regular enforcement work.

Since opening the Insectary this past year we have produced and liberated, in Riverside County orchards -

48,000	-----	Cryptolaemus
60,000	-----	Leptomastix
86,000	-----	Habrolepis rouxie
7,900	-----	C. Rusti
51,000	-----	Mesopeltis
9,500	-----	Metaphycus
15,000	-----	Microterys
97,000	-----	Diversinervous

The Insectary was reopened for the specific purpose of producing these new parasites recently introduced by the University in an attempt to prove or disprove the desirability of continuing with commercial production. It would appear that some of these parasites may be extremely beneficial and that it would probably be desirable to maintain the Insectary in operation for the next two or three years.

NOXIOUS WEEDS ON COUNTY HIGHWAYS:

Division II, Chapter I, Section 132 of the Agricultural Code, relates to the control of noxious weeds on County highways.

Citrus Committee, Representative Committee. The Sub-committee is composed of Chairman, D. S. Bell, George Cole and Arthur McDermont, as the other members.

The only additional fund budgeted last year for this work was \$1000.00 for insectary supplies. Supervision and labor cost was not budgeted which has meant, of course, that it has been necessary to take two of our regular men from their regular duties and use them on this work - reducing our available man power considerably in our regular enforcement work.

Since opening the Insectary this past year we have produced and liberated, in Riverside County orchards -

48,000	-----	Cryptolaemus
60,000	-----	Leptomastix
86,000	-----	Habrolepis rouxie
7,900	-----	C. Rusti
51,000	-----	Mesopeltis
9,500	-----	Metaphycus
15,000	-----	Microterys
97,000	-----	Diversinervous

The Insectary was reopened for the specific purpose of producing these new parasites recently introduced by the University in an attempt to prove or disprove the desirability of continuing with commercial production. It would appear that some of these parasites may be extremely beneficial and that it would probably be desirable to maintain the Insectary in operation for the next two or three years.

#### NOXIOUS WEEDS ON COUNTY HIGHWAYS:

Division II, Chapter I, Section 132 of the Agricultural Code, relates to the control of noxious weeds on County highways.

Several members of the Board have requested that I outline, if possible, a tentative plan for the control of noxious weeds on county highways and other public properties.

For several years this work was handled by the County Agricultural Department and it was then found that in order to conduct this work in an efficient manner it was necessary to provide at least three modern and up-to-date oil spray outfits, with trained personnel.

This service was transferred to the Road Department several years ago and our understanding is that at the present time only two small spray outfits are available, both of which are some ten to twelve years old, and inadequate to carry on the work in an efficient manner; therefore I would recommend that this matter be considered by the Board and that this branch of service be adequately mechanized so that the farmers and fruit growers of Riverside County may be given adequate assistance in their increasing difficulties with this major pest -- that of weeds.

ABATEMENT OF PUBLIC NUISANCE:

Division II, Chapter I, Section 135 to 138 of the Agricultural Code, provides for the Abatement of Public Nuisance, declares that infested premises are public nuisances and further provides that where abatement work is preformed by the County a lien shall be filed covering the amounts expended.

During this past year we have had a large number of such cases - - a total of twenty-five being filed up to and including December 1st. We are informed that there will be considerable more work of this type to do during the balance of the season.

Respectfully submitted:

A. E. BOTTEL  
Agricultural Commissioner  
Riverside County

**Riverside**  
**County**

CROP REPORT FOR 1939:

RIVERSIDE COUNTY DEPARTMENT OF AGRICULTURE:

This is the fourteenth year the Agricultural Department of Riverside County has assembled data concerning production and agricultural income for the County. Production and income figures are obtained through the willingness of growers, packers and others, to give them to representatives of this office. Their accuracy depends upon this cooperation, our ability to find all sources, and correlation of the data into totals.

The figures for acreage represent "net planted"; yield or production is expressed in terms of recognized commercial units, and total value is based on f. o. b. prices. These income figures included cost of production, harvesting and packing; therefore in order to obtain the farm value of the commodity these costs must be deducted from the totals. If these deductions were made it undoubtedly would be true that few of the commodities have paid cost of production, harvesting and packing.

An increased number of requests are received each year from growers' organizations, banks, Chambers of Commerce, and other agencies, for crop information, production and value; thus our efforts to secure more accurate information along these lines have increased.

We wish to take this opportunity to acknowledge out appreciation of the splendid cooperation extended to the Agricultural Inspectors and the office, by those individuals, and organizations, contacted for information in compiling these figures.

  
W. H. WRIGHT  
Agricultural Commissioner

# AGRICULTURAL CROP REPORT Riverside County

1940

RIVERSIDE COUNTY DEPARTMENT OF AGRICULTURE

CROP REPORT FOR - 1940

The Agricultural Code states, in Section 65.5: "The Commissioner shall compile reports of the condition, acreage, production and value of the agricultural products in his county. The Commissioner may publish such reports and shall transmit a copy thereof to the Director."

In so far as possible the acreage represents "net planted", the values of all crops are F. o. b. basis not what the farmer received. It is intended that the returns shall mean income to Riverside County and thus include the cost of picking, hauling, packing and otherwise preparing for delivery at the point of packing.

The following diversion and benefit payments made by the Agricultural Adjustment Administration for 1939 practices, and received during 1940 under the Agricultural Conservation program, have not been included in the totals as they were not included in previous reports.

<u>Payments:</u>			
1939	-	-	Sugar beets - - \$ 11,083.24
1940	-	-	Cotton parity - - 58,303.76
1940	+	-	Wheat parity - - 13,886.78
1939	-	-	(Agricultural Conservation program) 188,850.24
1939	-	-	Range 2,140.87
			TOTAL <u>\$274,264.89</u>

The Farm Advisor's Office, Agricultural Conservation Association, growers' Associations, dealers and farmers have contributed data for this report. We wish to thank the many persons and agencies who furnished crop information.

*W. H. Wright*  
 W. H. WRIGHT  
 Agricultural Commissioner

# AGRICULTURAL CROP REPORT Riverside County

1941

UNIVERSITY OF CALIFORNIA  
LIBRARY  
COLLEGE OF AGRICULTURE  
DAVIS

RIVERSIDE COUNTY DEPARTMENT OF AGRICULTURE

CROP REPORT FOR - 1941

The Agricultural Code states, in Section 65.5: "The Commissioner shall compile reports of the condition, acreage, production and value of the agricultural products in his county. The Commissioner may publish such reports and shall transmit a copy thereof to the Director."

In so far as possible the acreage represents "net planted". The value of all crops are F.O.B. basis, and include cost of picking, packing, hauling and otherwise preparing for delivery at the point of packing. Thus the returns indicate income to Riverside County, but do not represent income to the grower.

The following diversion and benefit payments made to farmers by the Agricultural Adjustment Administration during 1941, have not been included in the totals as they were not included in the totals of previous reports.

A.A.A. Payments - 1941:

Sugar beets -----	\$ 22,180.40
Cotton and Wheat parity-----	73,668.71
Agricultural Conservation program-----	170,122.77
Range-----	2,600.00
	<u>\$ 268,571.88</u>

We wish to thank the many persons and agencies who furnished crop information, as well as our Agricultural Inspectors and office personnel who have made this report possible.

  
W. H. Wright  
Agricultural Commissioner

RIVERSIDE COUNTY  
ANNUAL CROP AND ACREAGE REPORT

1942

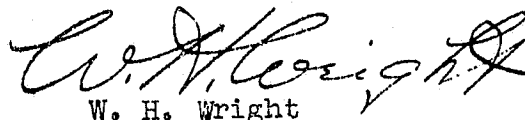

These returns indicate gross returns on agricultural production to Riverside County, and do not represent income to the grower. The value of all crops are F.O.B. prices, and include cost of picking, packing, hauling, and preparing for market.

Although the total returns represent an increase for Riverside County, the increased cost of production, due to higher wages paid to labor, higher cost of repairs and all materials purchased, left a smaller net return to the grower, except in a few favorable instances, than in 1941. On some crops the low returns and inability to obtain adequate labor at harvest made a disastrous season for the farmer, even to the extent of losing his original investment.

The loss of trained personnel to higher paying jobs in industry, and to the armed forces, the inability to obtain adequate labor, equipment, and repair parts presented tremendously serious problems to the farmer, and increased his cost of production beyond the increased return.

There is no more patriotic group in America than the farmer, however labor, equipment, and materials must be made available to him if he attains the production of 1942, to say nothing of the production goals for 1943.

This report is prepared in compliance with Section 65.5 of the Agricultural Code of California. We wish to thank all agencies and persons who contributed for their cooperation in making this report.

W. H. Wright  
Agricultural Commissioner
