California Department of Food and Agriculture

Agricultural Commissioners' Crop Reports

Santa Clara County

1940-1949

California County Agricultural Commissioners' Reports from the California Department of Food and Agriculture. This collection consists of annual crop and livestock data from each of the 58 California Counties. The collection covers 1915-1981; digitization of the rest of the collection is forthcoming.

This digitization project was funded by the Giannini Foundation of Agricultural Economics,
<http://giannini.ucop.edu/> .

The work was completed by the staff of the Giannini Foundation Library, University of California, Berkeley, <http://are.berkeley.edu/library/> . **Please contact the Library to consult the originals.**

HALL OF JUSTICE
SAN JOSE, CALIFORNIA

June 15, 1942

To the Honorable Board of Supervisors of
Santa Clara County, and
W. J. Cecil, Director of the State Department of Agriculture
Sacramento, California.

Gentlemen:-

This is a statistical report covering acreage, production, unit valuation, and the total value of agricultural crops. The report also included the payments made to agriculturists by the United States Department of Agriculture, for the year 1941

The total value of all agricultural crops is up \$5,701,690.00 over the 1940 report, or a gain of 26%. The figures are based on gross returns and do not indicate what the net returns may have been.

I wish to take this opportunity to thank the many individuals who have submitted the data that has made this report possible.

Very truly yours,

L. R. CODY
AGRICULTURAL COMMISSIONER

Wheat parity payments 921 acres -----	<u>629.28</u>
Total	\$375,105.81

WALNUT NOTES

The 1941 Walnut Crop was the largest in Santa Clara County's history, and the quality was the highest of any walnut producing area in California, despite the fact that most orchards suffered heavily from Walnut Blight.

Santa Clara County walnut growers received 16 cents a pound, or 2 cents a pound more for their crop than the average price received by the rest of the State.

The crop consisted of 3,200 tons of which 98% made Diamond quality and 80% were of the large size and only 6% were culls.

The Walnut Codling Moth situation in Santa Clara County is not near as serious as in most of the walnut producing sections of California, but must be viewed with apprehension. In 1941 the Walnut Plant handled 311 lots of wormy walnuts, which averaged 2.54% worms. Of these 311 lots, only 24 lots contained over 5% worms.

Control measures in this area are suggested as in other parts of the State, that is spraying with four pounds of basic arsenate of lead to each 100 gallons of water with the addition of the spreader recommended by the manufacturer of the lead. This material is usually applied around the first of June, which is about the time the nuts in the clusters are touching.

June 29, 1943

To the Honorable Board of Supervisors of
Santa Clara County, and
W. J. Cecil, Director of the State Department of Agriculture
Sacramento, California.

Gentlemen:

In compliance with Section 65.5 of the Agricultural Code of the
State the following statistics have been compiled by my office.

I wish to take this opportunity to thank the individuals, and
firms which submitted figures for this report.

The figures are gross receipts of producers and do not indicate
net returns. Also, the f.o.b. processed and packaged goods would show
a much larger return to the County.

Very truly yours,

L. R. CODY
AGRICULTURAL COMMISSIONER

ANNUAL REPORT

OF THE

SANTA CLARA COUNTY

DEPARTMENT OF AGRICULTURE

L. R. CODY

AGRICULTURAL COMMISSIONER

1943

COUNTY OF SANTA CLARA

DEPARTMENT OF AGRICULTURE

L. R. CODY
Agricultural Commissioner and
State Plant Quarantine Officer

HALL OF JUSTICE
SAN JOSE, CALIFORNIA

PHONE COLUMBIA 4262 - BEFORE 9 A. M.
COLUMBIA 4260, LOCAL 27 - AFTER 9 A. M.

June 22, 1944

To the Honorable Board of Supervisors of
Santa Clara County, and
A. A. Brock, Director of the State Department of Agriculture,
Sacramento, Calif.

Gentlemen:

In compliance with Section 65.5 of the Agricultural Code
of the State of California, the following statistics have been
compiled by my office.

I wish to take this opportunity of thanking individuals
and companies that have assisted by checking and submitting
data for this report.

As in previous years, the figures are the gross returns
to growers.

Vegetables are being grown in increasing acreage to go
into quick freezing. The quick freezing industry is also using
large amounts of fruits, and is expanding rapidly.

In some cases growers of vegetables do no harvesting.
The handlers come into the fields and harvest the crop, this
greatly facilitates proper handling for shipping or quick
freezing.

The total receipts are up \$10,348,196.00 over the 1942
returns, mostly from higher fruit prices.

The 1943 apricot crop was very disappointing, being one
of the lowest on record for many years.

Respectfully submitted,

L. R. CODY,
AGRICULTURAL COMMISSIONER

ANNUAL REPORT
OF THE
SANTA CLARA COUNTY DEPARTMENT OF AGRICULTURE

In 1922 the Santa Clara County Department of Agriculture acted in cooperation with the Department of Commerce, Weather Bureau, in maintaining Fruit Frost Service. This service has been continued each year thereafter.

The work is now being done by Mr. Wayne H. Harman, Meteorologist. The County's share for this service is \$350.00 per year.

The service is of particular value to apricot growers. Frost warnings are given each evening, and each year growers may have their thermometers checked for accuracy, free of charge.

Attached is a special mimeographed sheet put out by Mr. Harman after this year's observations.

A SURVEY OF DAMAGING TEMPERATURES TO APRICOTS IN THE
SANTA CLARA VALLEY DURING SPRING SEASONS, 1922 TO 1944.

Based on many observations in the field, the following table of temperatures which will be endured by apricots for 30 minutes without damage, is recommended by the Fruit-Frost Service as a guide in orchard heating: Stage 1, buds closed but showing color--25 degrees. Stage 2, full bloom--28 degrees. Stage 3, small green fruit--31 degrees.

As a supplement to this table which does not cover all of the stages of development of the fruit, a review of careful observations of freezing temperatures and frost damage to apricots in the Santa Clara Valley since the Fruit-Frost Service was introduced in 1922, is offered:

FRUIT STAGES	Temperatures endured for 30 minutes without apparent damage	NOTES ON FROST DAMAGE
1. Buds closed but showing color	----	No experience.
2. Full bloom	28	Thinned by 27 degrees or lower.
3. Petals just dropped	30	Thinned by 29 degrees for $\frac{1}{2}$ hour or more.
4. Ready to drop "jacket"	30	In some cases damage by 30 degrees for $1\frac{1}{2}$ hours; in some cases uninjured at 29 degrees for $\frac{1}{2}$ hour.
5. "Jacket" dropped but pit not hard.	31	Several cases of slight injury at 31 degrees for 1 hour or more. In some cases part of fruit damaged and caused to drop by 30 $\frac{1}{2}$ degrees for $\frac{1}{2}$ hour. Some cases of 29 degrees for $\frac{1}{2}$ hour caused no apparent injury.
6. Over $\frac{1}{2}$ inch in diameter and pit hard.	30 $\frac{1}{2}$	In 1928 not injured by 31 degrees for $1\frac{1}{2}$ hours. No apparent injury caused by 29 degrees for $\frac{1}{2}$ hour on one occasion, below 30 degrees for two hours on another.

In stages 4 and 6 part of the crop has survived 28 degrees continued for $\frac{1}{2}$ hour or more. Stage 5 is most easily damaged and some growers prefer to fire at 32 degrees. There are so many factors which influence the degree of frost damage that it is often impossible to state the exact temperature at which damage will occur.

The above temperature data were obtained by regulation thermometers in standard fruit-region shelters.

To the Honorable Board of Supervisors
Santa Clara County

and

A. A. Brock, Director
State Department of Agriculture
Sacramento, California

Gentlemen:

Section 65.5 of the Agricultural Code states:

"The Commissioner shall compile reports of the condition, acreage, production, and value of the agricultural products in his county. The Commissioner may publish such reports, and shall transmit a copy thereof to the director."

The figures given are gross receipts, which includes costs of harvesting, hauling, and other costs incurred up to the point of packing.

I wish to take this opportunity to thank the many individuals, co-operatives, and companies who have submitted valuable information that has made this report possible.

Respectfully submitted,

L. R. CODY

A SURVEY OF DAMAGING TEMPERATURES TO APRICOTS IN THE
SANTA CLARA VALLEY DURING SPRING SEASONS, 1922 TO 1945.

In the annual report for 1944, an outline was given of temperatures which had been endured for 30 minutes by apricots in various stages of development, without apparent damage, together with brief notes on injury that had occurred when the temperature dropped below a critical point. Much interest has been shown in this survey and it is repeated below:

FRUIT STAGES	Temperatures endured for 30 minutes without apparent damage.	NOTES ON FROST DAMAGE
1. Buds closed but showing color	-----	No experience.
2. Full bloom	28	Thinned by 27° or lower.
3. Petals just dropped	30	Thinned by 29° for $\frac{1}{2}$ hour or more.
4. Ready to drop "jacket"	30	In some cases damaged by 30° for $1\frac{1}{2}$ hours; in some cases uninjured at 29° for $\frac{1}{2}$ hour.
5. "Jacket" dropped but pit not hard.	31	Several cases of slight injury at 31° for 1 hour or more. In some cases part of fruit damaged and caused to drop by 30 $\frac{1}{2}$ ° for $\frac{1}{2}$ hour. Some cases of 29° for $\frac{1}{2}$ hour caused no apparent injury.
6. Over $\frac{1}{2}$ inch in diameter and pit hard.	30 $\frac{1}{2}$	In 1928 not injured by 31° for $1\frac{1}{2}$ hours. No apparent injury caused by 29° for $\frac{1}{2}$ hour on one occasion, below 30° for two hours on another.

In stages 4 and 6 part of the crop has survived 28° continued for $\frac{1}{2}$ hour or more. Stage 5 is most easily damaged and some growers prefer to fire at 32°. There are so many factors which influence the degree of frost damage that it is often impossible to state the exact temperature at which damage will occur. Using this table as a guide, some oil will no doubt be used unnecessarily. However, if temperatures are maintained in accordance with the table, frost damage to apricots should never occur.

Other conditions being equal, greater damage has been noted on weak, undernourished trees than on vigorous, healthy trees. Frost damage in young trees is also frequently noted to be greater than in mature orchards because the fruit grows nearer to the ground where lower temperatures occur, and the fruit is not so well shielded by overhanging foliage.

The above temperature data were obtained by regulation thermometers in standard fruit-region shelters.

Table 6. Average minimum temperature on nights of large and small temperature inversion; average minimum temperature on all cold nights of the 1945 season; number of nights with 32° and lower and 30° and lower at each station; and lowest temperature observed at each station with date of occurrence.

Sta. No.	Station Name	Average Min. Temp.			Nights with		Absolute Minimum and date
		Large Inver- sion	Small Inver- sion	All Cold Nights	32° & Lower	30° & Lower

HALL OF JUSTICE

SAN JOSE, CALIFORNIA

April 20, 1946

To the Honorable Board of Supervisors
Santa Clara County

and

A. A. Brock, Director
State Department of Agriculture
Sacramento, California

Gentlemen:

I hereby submit the annual report of the County Department of Agriculture in compliance with Section 65,5 of the State Agricultural Code.

The figures submitted are compiled from data collected from growers, shippers, canners, public carriers, and reflect gross amounts received by agriculturists in this county for the year 1945.

The packaging of frozen fruits and vegetables is expanding rapidly. On the whole the year 1945 was one of success for most growers.

I wish to thank all those who have assisted and made it possible to get this report out.

Respectfully submitted,

David T. Rayner

HALL OF JUSTICE

SAN JOSE, CALIFORNIA

March 19, 1947

To The State Director of Agriculture
And
The Honorable Board of Supervisors

Gentlemen:

As required by the State Agricultural Code, we have prepared and are pleased to submit the following report.

Acreages of fruits and nuts are those of bearing age. Yields are generally given in tons, otherwise in standard commercial packages of the particular crop. Values expressed are those obtained by farm operators, which include in nearly all cases costs of production and harvesting. The total gross income, we believe, is an all time high for the County. Prunes still stand out far in advance of other crops in total gross returns. This crop alone shows a gross return to grower of \$21,675,000., which is up \$3,150,000. over the 1945 crop in spite of the fact that the tonnage was 10,000 tons less than in 1945. Grapes, while production was a little less than $2\frac{1}{2}$ tons per acre, came out with a price of \$120. per ton.

We are making a ranch to ranch survey to obtain the correct acreage of fruits and nuts of bearing and non-bearing ages. Probably the bearing acreages shown will in some cases be considerably revised in the 1947 report. New subdivisions for building sites are definitely cutting into fruit acreages.

Vegetables had their ups and downs in 1946. Early fall frost cut the bell pepper, tomato, and cauliflower crops. Fordhook limas with 1200 acres preformed rather well and went into quick freeze plants. Garlic took a big jump up and the $12\frac{1}{2}$ price gave a rather good return per acre. By carefully checking the vegetable crop returns, it is easy to see all growers were not in an enviable position at the end of the 1946 season.

The live stock industries show substantially higher gross returns than in 1945. On the whole the year 1946 was generally a very successful one for most Agriculturists. In 1940 our total gross agricultural production was \$21,547,408., and the figure has increased each year to the 1946 all time high of \$82,664,453.

In conclusion, we are particularly indebted to the many individuals who very willingly cooperated in giving information that made it possible to assemble the enclosed information.

Respectfully submitted,

David T. Rayner

HALL OF JUSTICE
SAN JOSE, CALIFORNIA

April 30, 1948

To The Honorable Board of Supervisors
of Santa Clara County

And

Mr. A. A. Brock, State Director
of Agriculture

Gentlemen:

In compliance with Section 65.5 of the Agricultural Code, I am pleased to submit a report of acreage, production, and gross value of agricultural crops for the calendar year 1947.

As in previous reports the figures submitted are GROSS returns to producers. To arrive at a true farm value, the various costs of production, harvesting, packaging, and handling would necessarily have to be deducted from these figures. This method of showing agricultural income necessarily does not reflect the very low net return to many of our fruit growers.

I believe this report is a conservative picture of the gross value of agricultural crops produced in the County for the year.

I wish to express my sincere appreciation to all persons and firms who cooperated by furnishing data to make this report possible.

Respectfully submitted,

David T. Rayner

DAVID T. RAYNER
AGRICULTURAL COMMISSIONER

Compiled By

ALBERT M. FOSTER

Assistant Agricultural Commissioner

April 6, 1949

To The Honorable Board of Supervisors
Santa Clara County

And

Mr. A. A. Brock, State
Director of Agriculture

Gentlemen:

As requested in Section 65.5 of the Agricultural Code,
I am pleased to render the following report for the calendar year 1948.

The over all picture shows an increase over the 1947 report. As in previous years, figures are the gross returns received by producers. It was a disappointing year for many growers that produced extremely heavy crops, resulting in very little or no net returns.

I wish to express my sincere appreciation to all those that were so very cooperative in making this report possible.

Respectfully submitted,

David T. Rayner

DAVID T. RAYNER
AGRICULTURAL COMMISSIONER

Compiled By

ALBERT M. FOSTER

Assistant Agricultural Commissioner

C O U N T Y O F S A N T A C L A R A

DEPARTMENT OF AGRICULTURE

Hall of Justice
San Jose, California
May 4, 1950

Mr. A. A. Brock, State
Director of Agriculture

And

The Honorable Board of Supervisors

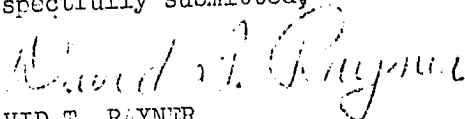

Gentlemen:

This Agricultural Report shows production and value of all crops grown in the County for the year 1949. It is issued in compliance with Section 65.5 of the State Agricultural Code.

Acreage of the permanent crops show actual bearing acreage only, other crops in actual planted acreage. The production is reported in units commonly used in the marketing of crops commercially in this County. Returns shown are gross return from produce and do not in any way reflect the net farm values.

I wish to express my sincere appreciation to each individual who has assisted in the compilation of the report.

Respectfully submitted,

DAVID T. RAYNER
AGRICULTURAL COMMISSIONER

DTR:NM

FRUITS AND NUTS - 1949

NOTE: The dropping off of prune acreage is not reflected in the production to any great extent.

FROST SERVICE

Prepared By

WAYNE HARMAN, METEOROLOGIST
U. S. Weather Bureau

Each year since 1922 the Santa Clara County Department of Agriculture has co-operated with the Fruit-Frost Service of the U. S. Weather Bureau in maintaining a frost warning service for Santa Clara County.

Growers' thermometers are collected by the Department each March, and checked for accuracy free of charge by a representative of the Weather Bureau.

Weather Bureau temperature recording instruments valued at several thousands of dollars are located at twenty-three selected points in the county to aid growers in protecting crops against frost damage in the most efficient manner.

Minimum temperature forecasts are given each evening in the spring months until the danger of frost has ceased and in addition the services of a trained meteorologist are available during the frost season for advice on frost protection.

The following table gives the average minimum temperature on all cold nights of the 1949 season, the number of nights with 32° and lower and 30° and lower and the lowest temperature observed at each station with the date of occurrence:

Station Name	Average Min. Temp.	Nights with 32° & 30° & lower lower		Absolute Minimum & Date
