California Department of Food and Agriculture

Agricultural Commissioners' Crop Reports

# Santa Clara County

## 1958-1961

California County Agricultural Commissioners' Reports from the California Department of Food and Agriculture. This collection consists of annual crop and livestock data from each of the 58 California Counties. The collection covers 1915-1981; digitization of the rest of the collection is forthcoming.

This digitization project was funded by the Giannini Foundation of Agricultural Economics,  
<http://giannini.ucop.edu/> .

The work was completed by the staff of the Giannini Foundation Library, University of California, Berkeley, <http://are.berkeley.edu/library/> . **Please contact the Library to consult the originals.**

# AGRICULTURAL CROP REPORT

DAVID T. RAYNER  
AGRICULTURAL COMMISSIONER  
• 227 N. First Street •  
SAN JOSE, CALIFORNIA

# COUNTY OF SANTA CLARA

## DEPARTMENT OF AGRICULTURE

DAVID T. RAYNER

AGRICULTURAL COMMISSIONER AND  
STATE PLANT QUARANTINE OFFICER

227 NORTH FIRST STREET  
SAN JOSE 13, CALIFORNIA

PHONE CYPRESS 5-1050

Mr. W. C. Jacobsen  
State Director of Agriculture  
and  
The Honorable Board of Supervisors  
of Santa Clara County

Gentlemen:

As required by Section 65.5 of the Agricultural Code of the State of California, I herewith submit the 1958 Annual Agricultural Crop Report for Santa Clara County. The report covers the acreage, production and value of all major crops produced in Santa Clara County, including livestock and livestock products, cut flowers, nursery stock, and seed crops.

The figures presented are based on values paid to the producer at the point of production, and in most instances do not include container costs.

It was anticipated that the gross income for 1958 would be several million dollars less than the previous year, due to a decrease in acreage of most crops, and considerable crop loss from excessive rainfall during the fruit setting period, and delayed planting of many other crops. Considerably higher prices paid for many of the commodities resulted in a gross return of \$85,437,000, and only \$1,142,977 less than in 1957.

I wish to express my sincere thanks to the many individuals and organizations for their splendid cooperation by so willingly contributing the information which made the compilation of this report possible.

Yours very truly,

*David T. Rayner*

DAVID T. RAYNER  
AGRICULTURAL COMMISSIONER

## FROST SERVICE

Prepared by

Wayne E. Harman, Meteorologist  
U. S. Weather Bureau

Each year since 1922 the Santa Clara County Department of Agriculture has cooperated with the Fruit-Frost Service of the U. S. Weather Bureau in maintaining a frost warning service for Santa Clara County. The Santa Clara Valley is one of twelve important fruit-producing districts in the far western states where this specialized service is conducted each spring.

Growers' thermometers are collected by the Department each March and checked for accuracy, free of charge, by a representative of the Weather Bureau who is detailed to San Jose for the spring frost season.

Weather Bureau temperature recording instruments, valued at several thousand dollars, are located at approximately twenty representative locations in the county. A minimum thermometer and thermograph are installed at each station, providing an accurate record of the duration of low temperatures, as well as securing valuable information on daytime temperatures.

Minimum temperature forecasts for these stations are broadcast each evening by San Jose radio stations to aid growers in protecting their crops in the most efficient manner against frost damage. In addition, the services of a trained meteorologist are available for advice on frost protection problems.

### Weather Summary of the 1958 Spring Season

The month of February 1958 was one of the wettest and warmest on record, not only in Santa Clara County, but throughout California. The warm weather shortened the period of dormancy for many varieties of fruits and nuts, and the bud and blossom development was about ten days to two weeks earlier than normal. Rainy weather interfered with pollination of the early blossoms, and the application of dormant and pre-blossom sprays was behind schedule. Soil preparation for a variety of field crops was also delayed.

Continued wet weather in March prevented adequate spray coverage although some growers used airplanes for spray applications. This set the stage for serious damage by fungus and bacterial diseases. Daytime temperatures were consistently below normal and the rainy, cloudy weather continued unfavorable for the pollination and development of fruit and nut crops. The bloom and later growth was quite irregular.

Rain and cool weather through the first week in April held orchard work at a standstill and continued to slow the development of fruit and nut crops. After the first week of April, however, the weather conditions improved rapidly and favored the soil preparation, planting and development of field crops.

Warm, sunny, dry weather was an aid in slowing the spread of fungus and bacterial diseases which had already taken a large toll in fruit.

Frost damage this season in Santa Clara County was light and confined to a few unprotected orchards and also to a relatively small acreage of grapes and tomatoes and other tender plants. Most of the frost damage occurred on the mornings of April 24 and 25.

# AGRICULTURAL CROP REPORT

DAVID T. FAYNER  
County Agricultural Commissioner  
• 227 N. First Street •  
SAN JOSE, CALIFORNIA

Mr. William E. Warne  
Director, California Department of Agriculture  
and  
The Honorable Board of Supervisors  
of Santa Clara County

Gentlemen:

I herewith submit the 1959 Annual Agricultural Crop Report for Santa Clara County, which is in accordance with Section 65.5 of the Agricultural Code. This report covers the acreage, production and value of all major crops produced in Santa Clara County, including livestock and livestock products, nursery stock, cut flowers and seed crops.

This report shows the bearing and non-bearing acreage of fruits, nuts, and berries. Other crops are reported in actual harvested or bearing acreage. The prices reported are on a F.O.B. basis, and do not include the cost of production and marketing.

The 1959 total shows an increase in value of \$10,452,731 over the 1958 total value. The crops primarily contributing to this increased value were: apples, apricots, plums, prunes, walnuts, strawberries, cut flowers, and nursery stock. Increased production generally accounts for the increased value. A slight decrease in value of most vegetable, livestock, poultry, rabbits, and seed crops was due to lower production and prices.

This office has endeavored to prepare its Annual Crop Reports in a form and manner that would provide additional crop information for the assistance of persons interested in specific crop data. In this year's report, a conversion table on page 9 is included to aid anyone in converting tons to containers. The average weights for containers appearing in this table were used to determine the tonnage of most vegetables reported. Whenever possible, every effort has been made to prepare this report in conformity with the recommended form of the Bureau of Agricultural Statistics of the California Department of Agriculture.

I wish to express my thanks to the many individuals and organizations for their splendid cooperation by so willingly contributing the information which made the compilation of this report possible.

Respectfully submitted,

*David T. Rayner*

# AGRICULTURAL CROP REPORT

**DAVID T. RAYNER**  
**AGRICULTURAL COMMISSIONER**  
75 West St. James Street  
**SAN JOSE, CALIFORNIA**

Mr. Charles Paul  
Director, California Department of Agriculture  
and  
The Honorable Board of Supervisors  
of Santa Clara County

Gentlemen:

In accordance with the provisions of Section 65.5 of the California Agricultural Code, I am submitting the 1960 Annual Agricultural Crop Report for Santa Clara County.

This report covers the acreage, production and value of crops produced in the County. The values reported represent the gross farm income, and do not reflect the net income to producers. Cost of production, harvesting, packing, and other handling costs should be deducted for a true farm value.

The total value of the agricultural crops of this county listed herein amount to \$91,303,510 for 1960, as compared to \$95,889,733 for 1959. Primarily, the decrease in farm value returns can be attributed to our change-over method of reporting livestock production in conformance with the suggested statewide reporting procedure. This provides that when animals are sold the values are based on the average net weight gained during the period of possession, rather than reporting on the total weight of the animals at the time of sale. Other reasons for the decrease of farm values are a reduction of vegetable acreage and lower prices paid for the commodities; the reduction of strawberry acreage; and subnormal yield of bushberries. These crops accounted for a decrease of approximately \$3,500,000. Although there was a reduction of approximately 3,500 acres of orchard land, fruits and nuts showed an increase of \$3,000,000 over 1959. In most instances, normal yields and better prices received are the reasons for the increase. Increased production and the establishment of more producers of cut flowers, nursery stock and seed crops in Santa Clara County contributed to the two and one-quarter million dollar increase of these items.

To the many individuals and organizations who so willingly cooperated in contributing the information necessary for the compilation of this report, I express my sincere thanks.

Respectfully submitted,

*David J. Rayner*

# AGRICULTURAL CROP REPORT

SEP 13 1962

**DAVID T. RAYNER**  
AGRICULTURAL COMMISSIONER

75 West St. James Street  
SAN JOSE, CALIFORNIA

Mr. Charles Paul  
Director, California Department of Agriculture  
and  
The Honorable Board of Supervisors  
of Santa Clara County

Gentlemen:

In accordance with the provisions of Section 65.5 of the California Agricultural Code, I am submitting the 1961 Annual Agricultural Crop Report for Santa Clara County.

This report shows the acreage, production and value of crops produced in the County. The reported values represent the gross farm income to producers. All values are reported in rounded dollars. The values indicated for most of the commodities reported are f.o.b. roadside, and do not include the cost of containers, packing, or hauling. Most of the vegetable values are an exception to this, and do include the cost of containers only.

The agricultural production and total value of the agricultural crops of the County in 1961 decreased \$12,055,610. from the preceding year. There were three major contributing factors for this decrease: First, a reduction of fruit and nut tree acreage for urbanization purposes; second, below freezing temperatures during blossom and fruit setting period; and third, two extremely hot spells during critical periods.

A.C.P. payments are not included in the gross agricultural production figures, but are given for information purposes.

I wish to express my sincere thanks to the many individuals and organizations who so willingly cooperated in contributing the information necessary to make this report possible.

Respectfully submitted,

*David T. Rayner.*

DAVID T. RAYNER  
AGRICULTURAL COMMISSIONER

SANTA CLARA COUNTY
