California Department of Food and Agriculture

Agricultural Commissioners' Crop Reports

Tulare County

1970-1973

California County Agricultural Commissioners' Reports from the California Department of Food and Agriculture. This collection consists of annual crop and livestock data from each of the 58 California Counties. The collection covers 1915-1981; digitization of the rest of the collection is forthcoming.

This digitization project was funded by the Giannini Foundation of Agricultural Economics,
<http://giannini.ucop.edu/>.

The work was completed by the staff of the Giannini Foundation Library, University of California, Berkeley, <http://are.berkeley.edu/library/>. **Please contact the Library to consult the originals.**

TULARE
COUNTY

THE END OF THE TRAIL

The famous statue which is shown on our cover was created by James Earle Fraser for the Pan Pacific International Exposition in San Francisco in 1915. This statue was a plastic cast and not intended for the life it endured. The End of the Trail was obtained by Tulare County in 1916 and remained in Mooney Grove in Visalia, California until 1968 when it was moved to the Cowboy Hall of Fame and Western Heritage Center in Oklahoma City. In exchange for the statue, Tulare County will receive a 20 ft. bronze casting from the original. This bronze, which was cast in Italy, is to be dedicated in July, 1971, at Mooney Grove, where it will be a permanent reminder of the works of James Earle Fraser as will the restored original plaster cast which will remain in Oklahoma City at the Cowboy Hall of Fame.

Mr. Fraser's "End of the Trail" was acclaimed the most outstanding art depicting America's relationship to the changing of the past.

80 YEARS PROGRESS

Horticultural Commissioner Crop Report of Tulare County 1890.
At this time Kings County was included in Tulare County. Tulare County had a Board of Horticultural Commissioners consisting of three commissioners.

REPORT OF THE TULARE COUNTY BOARD

To the honorable the State Board of Horticulture:

Gentlemen: We have the pleasure of submitting to you our annual report for Tulare County.

This has been a prosperous year with our people, and there is so much to report connected with our work we find it difficult to be brief enough.

The valley of Tulare is distinct from the San Joaquin Valley. All the waters of this valley run into Tulare Lake, and has no outlet to the sea, while the waters of the San Joaquin Valley run into the bay of San Francisco.

The soil is different from anything in the State. Artesian boring shows the soil to be alluvial for at least twelve hundred feet, apparently as fertile on the bottom as the surface.

Tulare Valley embraces about half of Fresno, and all of Tulare and Kern Counties, and is as large as the States of Rhode Island, Connecticut, and Massachusetts.

Tulare County is the center of this valley, and is watered by Kings, Kaweah, Tule, White, and Kern Rivers. These rivers rise in the high Sierras, whose tops are covered with snow all summer, and furnish a never failing supply of water for irrigation, and run west and south to Tulare Lake, traversing the county from east to west, so that the whole area may be irrigated. Running from these rivers are deep sloughs traversing the whole country as they meander toward the lake, making all these rivers like the Mississippi, which empties its waters into the Gulf by many mouths. These sloughs are deep and drain the country when irrigated, so that our lands will never become impregnated with alkali as the lands of India, and even portions of our own State. A large portion of the land of Tulare County is irrigated by percolation.

This can be done nowhere else so perfectly in this State as here. This reduces the expense of irrigation almost to nothing; a ditch full of water will wet the land for half a mile. This is considered a dry country, five and one half to six inches being our average rainfall, and until within the last ten or twelve years the waters of our rivers were not used to irrigate.

Herd of cattle and horses roamed over the plains of Tulare County, and the rearing of these was the only industry known to the people.

First, what farming there was, met with such poor success that the land became known as the "Land of the Devil." This is all changed now. The county this year has exported over two million sacks of wheat, being the banner wheat county in the State. But fruit culture is taking the lead, and the wheat fields, with their steam harvesters, are rapidly disappearing, and the orchard and vineyard is dotting the plains.

It is almost impossible to give even an approximation of fruit shipped from this county. From Hanford there were shipped this season eight hundred thousand pounds of dried fruit, and three hundred thousand of green. Tulare shipped two hundred thousand pounds of dried, and one hundred thousand pounds of green fruit. Visalia, two hundred and eighty thousand pounds of dried, and two hundred thousand pounds of green fruit.

In this county all deciduous fruits do well, and along the foothills oranges and lemons grow as well as anywhere in the State. The olive will grow anywhere in the valley, and the English walnut does moderately well in the foothills.

Last season five thousand five hundred acres were planted to raisin grapes in the Lucerne District of Tulare County, and perhaps as many acres in the other portions of the county. This next season many more acres will be planted to vines. More vines are rooted this season than at any time, and many of them are sold already, to be planted next spring.

The French prune on peach stock does exceptionally well all over Tulare County. One tree, six years old, at Visalia, yielded this year one thousand one hundred and two pounds. One at Grangeville, seven years old, yielded one thousand one hundred and forty pounds this season.

Prune orchards will yield in Tulare County from five hundred to seven hundred pounds per tree when six years old, grafted on peach stock, and this season have produced \$1,000 per acre.

Peaches do better here than in any other part of the State, yielding this season from \$400 to \$600 per acre, some weighing as high as twenty and one half ounces.

Insect pests, for some cause not clearly defined, have disappeared almost entirely in the western part of the county. The lime, sulphur, and salt compound has been used unsparingly against the San Jose scale, and orchards not sprayed are as clean as those that were. The season and parasites likely have done most of the good work.

All along Tule River, and around Porterville, the San Jose scale is still doing its deadly work. All the apples and pears are spotted with scale. But little has been done to destroy the insect. The woolly aphis and codlin moth are both very troublesome in this district.

Around Visalia, insect pests are kept in check, and the fruit is clean. The same may be said of Tulare.

It is difficult to predict the future of this county. Unless some calamity befalls our fruit and raisin industry, within the next five years this will be the center of the fruit and raisin industry of the State.

Respectfully submitted.

N. W. Motherall,

I. H. Thomas,

I. N. Wright,

Commissioners

OFFICE OF
TULARE COUNTY AGRICULTURAL COMMISSIONER

COUNTY CIVIC CENTER
VISALIA, CALIFORNIA 93277

1970

TO JERRY FIELDER, DIRECTOR
STATE DEPARTMENT OF AGRICULTURE

AND

THE HONORABLE BOARD OF SUPERVISORS
TULARE COUNTY

The Agricultural Code states in Section 2279; "The Commissioner shall compile reports of the condition, acreage, production, and value of the agricultural products of his county. The Commissioner may publish such reports, and shall transmit a copy thereof to the Director."

Insofar as possible, the acreage represents "net planted" and the value of all crops is f. o. b. basis - not what the farmer received. While this is income to Tulare County, the cost of producing, picking, hauling, packing and otherwise preparing for market is deducted from these figures, and does not necessarily show the financial benefits that the farmer receives from any given commodity.

The information in this report is from many and varied sources and is as accurate as is possible. Our entire staff assisted in the compilation of these figures, also we are indebted to the many individuals and organizations for their help and cooperation in making available to this department their records and information. We wish to express our sincere appreciation for their valuable help.

Respectfully submitted,

Elvin O. Mankins
Agricultural Commissioner

TULARE COUNTY DAIRY INDUSTRY

The Dairy Industry got its start in Tulare County about 1860 when alfalfa farming developed. The first creamery was formed through joint stocks by a group of farmers just west of Visalia in 1890.

In 1900 there were approximately 7,000 head of dairy cattle in the county. During the period from 1901 to 1910, the industry made greater strides because of alfalfa use as a pasture feed and hay with corn silage.

The first real cooperative, the Dairymen's Cooperative in Tulare, was incorporated in 1909. This co-op is still the largest in Tulare County.

By 1919 the gross value of dairy products exceeded \$3,000,000.00. This does not include the sale of slaughter animals or breeding stock, nor does it include replacement cow revenue. In 1925, 7,000,000 lbs. of milk fat was being produced and by 1940 the average cow production was 8,962 lbs. of milk. This was nowhere near the 1971 average production per cow of 14,755 lbs. of milk.

Among the reasons for the vast improvement made by this industry are: better management in all fields of endeavor, better selection of cows for replacement, much more superior sires, artificial insemination programs, improved equipment, disease control and more conducive environment. Self and government inspection and testing programs have helped the industry to better itself. Improved feeds and feeding techniques have also increased yields. Dairymen today operate almost completely under dry lot conditions with green chopped alfalfa and hay being fed in summer and winter silage plus hay. In the barn at milking time, 15 to 18 lbs. of concentrates per cow are fed year round.

In 1940, 33,424 cows were being milked. At this time the figure is close to 70,000 head.

Some of the many milk and milk products are: fluid milks and creams of many types, dried or powdered milk for human and animal consumption in different forms. Condensed milk, ice cream, ice milk, butter, cheeses, cottage cheese, caseins and whey are a few of the others provided from milk.

While the greatest majority of the county's herds are Holsteins, some Guernsey, Jersey, and Brown Swiss contribute toward the \$45,519,000.00 milk production and \$2,653,000.00 manufactured milk products.

Tulare County has one new dairy coming in each month. These add to our present total of some 235 dairies. Of these, 225 are rated as Grade "A".

Sizes of herds range from 45 to 2,600 cows, the average being 275 head. It takes 26,500 replacement cows annually to keep this great industry on the upswing.

Due to increased land costs and the urban squeeze in Southern California, more and more dairymen are locating in the San Joaquin Valley. The climate and central location to major metropolitan areas like Los Angeles, San Francisco and Sacramento, and the abundant availability of feed makes it even more profitable for dairies to settle here.

ELVIN O. MANKINS
AGRICULTURAL COMMISSIONER

TELEPHONE 732-5511 EXT. 306

OFFICE OF
TULARE COUNTY AGRICULTURAL COMMISSIONER

COUNTY CIVIC CENTER
VISALIA, CALIFORNIA 93277

1971

TO WILLIAM F. COWAN, ACTING DIRECTOR
STATE DEPARTMENT OF AGRICULTURE

AND

THE HONORABLE BOARD OF SUPERVISORS
TULARE COUNTY

The Agricultural Code states in Section 2279; "The Commissioner shall compile reports of the condition, acreage, production, and value of the agricultural products of his county. The Commissioner may publish such reports, and shall transmit a copy thereof to the Director."

Insofar as possible, the acreage represents "net planted" and the value of all crops is f.o.b. basis - not what the farmer received. While this is income to Tulare County, the cost of producing, picking, hauling, packing and otherwise preparing for market is deducted from these figures, and does not necessarily show the financial benefits that the farmer receives from any given commodity.

The information in this report is from many and varied sources and is as accurate as is possible. Our entire staff assisted in the compilation of these figures, also we are indebted to the many individuals and organizations for their help and cooperation in making available to this department their records and information. We wish to express our sincere appreciation for their valuable help.

Respectfully submitted,

Elvin O. Mankins
Agricultural Commissioner

COUNTY OF TULARE

A BRIEF LOOK AT HISTORY OF BEEF CATTLE INDUSTRY IN TULARE COUNTY

Tulare County, from it's creation in 1852, has seen it's first agricultural business, the cattle industry, grow from an uncomplicated structure, based on hard work and help from Mother Nature, to the complex giant that we know today. The product has changed from tough, "cat-hammed" spanish cattle, slaughtered for hides and tallow, to our present day high-yielding, high quality beef cattle, developed through years of trials and research. Through all of this, the cattle industrys' contributions to Tulare County agriculture have been many and far reaching.

Tulare County has, from its' inception, encompassed some of the world's finest grazing lands; from the lush meadows of the High Sierra, to the alfilaria, wild oat and burr clover covered foothills and plains of the San Joaquin Valley.

Tulare County, as we know it today, is but a shadow of its former self, with original boundaries extending from Mariposa County on the north to Los Angeles County on the south; from the California - Nevada border on the east, to the crest of the Coast Range mountains in the west.

In 1856, Fresno County was created from portions of Tulare, Mariposa and Merced Counties. In 1861, Mono County was formed from parts of eastern Tulare County, Fresno, Mariposa and Calaveras counties. In 1866, Inyo and Kern counties were formed from eastern and southern portions of Tulare County, with Kings County being formed from its western most parts in 1893.

The early cattle markets were mainly to supply hides and tallow to the Eastern United States and abroad. The gold rush of the 1840's and 1850's, stimulated the need for fresh meat and changed the cattle outlook from "dry goods" to "groceries." It was during this period many herds were driven from Texas and Arkansas to our great valley for fattening and sold in the mining camps of the Mother Lode for fresh meat.

In Los Angeles, in 1852, 500 steers were purchased at \$25 per head and driven north through the San Joaquin Valley and sold for meat in these camps. By Civil War times, cattle prices were nearing \$75 per head.

With the coming of railroads and homesteaders, the Valley floor began its gradual transition from lush grazing land to rich, fertile, farm land, with dry land wheat the most prevalent crop. It was this encroachment, coupled with devastating losses of cattle from the floods of 1862 and 1864, that provided the catalyst needed to stimulate a general movement of the industry from the Valley floor to the foothill areas on its east side.

To further complicate things, the "No-Fence Law" was passed in 1874 to keep cattle from roaming unchecked on cultivated farms. This law made the cattle owner liable to any damage or injuries which resulted from his cattle trespassing on the property of others. The fences, though expensive (\$3.50 per rod), did serve as a deterrent to cattle thieves and did prove beneficial in the long run.

Prior to this, the law most pertinent to the cattle industry was the "Act to Regulate Rodeos", passed by the Legislature in 1851. This law provided that no man could mark or brand his "stock" cattle except at a general rodeo on his stock ranch or range claim. It also provided that all unmarked cattle, the mothers of which were unknown, would be considered the property of the owner of the farm on which they were found. If for some reason the cattleman was unable to make a rodeo, his neighbors were then free to make it at his expense. One can only surmise that good neighbors were indeed an asset during these times.

The railroads that brought the settlers and homesteaders also provided a means of quick delivery of cattle to markets, and greatly deminished the heavy loss due to shrinkage incurred on long cattle drives.

With increasing population came a demand for better quality beef. This in turn led to the gradual replacement of the old Spanish breed cattle with new English stock, mainly Durham, with Herfords, Angus and Charolais to follow. In 1882 the Assessment Rolls of Tulare County showed 15,391 cattle assessed at a value of \$186,267. The rolls of 1890 showed 36,391 valued at \$324,107.

The first 20 years of the 20th century brought even greater changes. Farming began to diversify. New tree and row crops were seen in limited plantings. Newer, more sophisticated methods of cultivation and irrigation were being developed, and most of the government land had been taken by 1925.

In the years following the Depression, farming made another giant stride from dry land grain cultivation, to irrigated crops, with cotton, grapes, alfalfa and tree fruits dominating the new plantings. It was during this period the cattle industry also began to change.

The availability of cotton meal, and a variety of feed grains, stimulated the construction of feed lots and Mills, and the industry took on a new look. Calves once held for three years before shipping elsewhere, were now being sent to local feed lots at a younger age, with the result being an earlier finish and a better product for the consumer.

The annual income to stockmen in Tulare County had risen from less than \$2 million in 1925 to \$3 million in 1930. By 1940 it was near \$5 million. At the end of World War II (1945), it had soared to nearly \$10 million. By 1965, the number of cattle marketed out of four major feed lots reached 112,216 head with a gross sale amounting to near \$24 million. Figures for 1972, under extreme drought conditions, indicate that total net income from all beef cattle sales was in excess of \$23 million.

Except for his horse and saddle, few things remain the same for our Tulare County cattlemen. The long cattle drives to market have given way to quick trips with gas and diesel driven cattle trucks.

The skinny Spanish cattle have been replaced with a variety of high-gaining beef cattle and crosses. Disease is now something that can be fought or even prevented with the advent of new vaccines and medical techniques.

But while modern technology has eased the load of our cattleman, the fruits of modern society have brought him new problems. Suburbia has inundated valuable grazing and farm lands and increased assessed value of neighboring agricultural lands, while the new awareness of environmental problems has caused a closer look at pesticides and pharmaceuticals, just to name a few.

With most problems, there are solutions, and our modern cattleman steams from hearty stock, used to solving such problems and adjusting to adversity.

With a look toward the future we can count on our Tulare County cattle industry for important new contributions to agriculture in particular and society in general.

OFFICE OF
TULARE COUNTY AGRICULTURAL COMMISSIONER
COUNTY CIVIC CENTER
VISALIA, CALIFORNIA 93277

1972

TO C. B. CHRISTENSEN, DIRECTOR
STATE DEPARTMENT OF FOOD AND AGRICULTURE

AND

THE HONORABLE BOARD OF SUPERVISORS
TULARE COUNTY

The Agricultural Code states in Section 2279; "The Commissioner shall compile reports of the condition, acreage, production, and value of the agricultural products of his county. The Commissioner may publish such reports, and shall transmit a copy thereof to the Director."

Insofar as possible, the acreage represents "net planted" and the value of all crops is f.o.b. basis - not what the farmer received. While this is income to Tulare County, the cost of producing, picking, hauling, packing and otherwise preparing for market is deducted from these figures, and does not necessarily show the financial benefits that the farmer receives from any given commodity.

The information in this report is from many and varied sources and is as accurate as is possible. Our entire staff assisted in the compilation of these figures, also we are indebted to the many individuals and organizations for their help and cooperation in making available to this department their records and information. We wish to express our sincere appreciation for their valuable help.

Respectfully submitted,

Elvin O. Mankins
Agricultural Commissioner

OLIVES

An ancient fruit serves a modern industry in Tulare County

The olive is truly an ancient fruit and is referred to many times in the Bible. It is quite possible that the Garden of Gethsemane still contains the same olive trees that were growing there at the time of Christ.

Originally olives grew wild and were first cultivated in Asia Minor more than 4,000 years ago. Between 680 B.C. and 570 B.C. olive trees were first brought to Italy, France and Spain. In 1560 three trees were carried to Lima, Peru and from these the extensive plantings of South America were produced.

The earliest report of olives in North America is dated 1755 when plants were introduced in South Carolina. In 1760 it is known that olive trees were carried to Florida, but the exact date they were introduced to California is unknown. California historians believe that olive seeds and cuttings were taken to Mexico from Peru and from there were brought to California by Spanish Padres. It is believed that olives were planted at the Mission San Diego about 1775. Olives were later cultivated at all 21 California missions and became an essential food for the Padres and Indians that lived nearby.

The variety of olive planted is now known as the Mission olive. The three other varieties of olives that are grown on a large commercial scale in California are: the Manzanillo, which means in Spanish "Little Apple", the Sevillano developed around Seville, Spain, and the Ascolano of Italian origin.

Agriculture gradually began to replace gold mining in California around 1875 and the California olive industry began. Olives were grown at that time for their commercial oil value and around 1900 it was discovered that olives could be canned like other fruits, and another segment of the industry began to take form.

Legend has it that olives were first found to be edible when the heavily laden branch of a tree near a river allowed the olives to trail in the water. The high alkaline content of the water leached the natural bitterness from the fruit.

In the late 1880's and early 1890's an olive planting boom started in Tulare County as Wells for irrigation were introduced. Some of the first plantings were in the Lindsay area by J. J. Cairns who was a large dry land grain farmer in Eastern Tulare County. Other known plantings were by Senator Stockton Berry and a large planting before 1900 on the Merryman Ranch northeast of the city of Exeter.

Through the early 1900's, olives continued to be planted and more modern methods of canning and processing were introduced. The olive industry grew to be an important part of the overall economy of Tulare County.

Some of the prices and yields reported around 1911 to 1912 were as follows: Yields were reported to be 2 to 6 tons per acre, on 18 year old trees, at \$75.00 to \$125.00 per ton. Picking costs were reported to be \$20.00 per ton.

During the next 40 to 50 years, several large commercial producers and canners were in operation in Tulare County. Among these were Lindsay Ripe Olive, Golden Eagle Products, V. R. Smith, Terra Bella Olive and several others scattered throughout the county.

Finally, we arrive at the end of the 1973 season. The California Crop and Livestock Reporting Service states that in 1973 there are 28,460 acres of olives planted in California and of this total 15,106 acres are located in Tulare County. This is approximately 57% of the total in California, and places Tulare County as the leader in the United States in total olive production.

Truly the ancient fruit, the olive, serves a modern day industry well.

C. B. CHRISTENSEN, DIRECTOR
CALIFORNIA DEPARTMENT OF FOOD AND AGRICULTURE

THE HONORABLE BOARD OF SUPERVISORS OF THE
COUNTY OF TULARE

Gentlemen:

In accordance with the provisions of Section 2279 of the California Agricultural Code, I am pleased to submit the Annual Agricultural Crop Report of the acreage, production, and valuation of the agricultural crops and products produced in the County of Tulare during the year 1973.

The year 1973 was a year of record farm income to the American farmer. It was also a year of record farm production costs to the same American farmer. It must be emphasized that this report shows gross returns to the producer on an f.o.b. basis, and is not intended to indicate actual profit. While this is income to Tulare County, the cost of producing, picking, hauling and packing and otherwise preparing for market is deducted from these figures, and does not necessarily show the financial benefits the farmer receives from any given commodity.

The information in this report is from many and varied sources and is as accurate as is possible. I wish to express my sincere appreciation for the assistance of all individuals and organizations who so willingly cooperated with this department in contributing the information necessary for the compilation of this report.

To all the members of my staff, I manifest my sincere thanks for their diligent and conscientious effort in obtaining and compiling the information included in this presentment.

Respectfully submitted,

Clyde R. Churchill
